## **NRC to Conduct Open House to Discuss 2022 Performance of Perry Nuclear Plant**

Nuclear Regulatory Commission staff will be available to discuss the 2022 safety performance of the Perry nuclear power plant during an in-person [open house](#) scheduled for June 22. The plant, operated by Energy Harbor, is located in Perry, Ohio, approximately 35 miles northeast of Cleveland.

The open house will be held from 5:30-6:30 p.m. Eastern time, at the Perry Public Library, 3753 Main Street in Perry. NRC staff responsible for plant inspection and oversight, including the resident inspectors based full-time at the site, will participate in the discussion.

The NRC determined that Perry operated safely during 2022. All inspection findings and performance indicators were green, or very low safety significance. As a result, Perry remains under the NRC's baseline level of oversight, which entails thousands of hours of inspection each year.

The NRC Reactor Oversight Process uses color-coded inspection findings and indicators to measure plant performance. The colors start at green and increase to white, yellow or red, commensurate with the safety significance of the issues involved. Inspection findings or performance indicators with more than very low safety significance trigger increased NRC oversight.

Plant inspections are performed by two NRC resident inspectors and other specialist inspectors from the agency's Region III office in Lisle, Illinois, and NRC headquarters in Rockville, Maryland.

The [annual assessment letter](#) for Perry is available on the NRC website. [Current performance information](#) for the plant is also available on NRC's website and updated quarterly.
