## **NRC to Hold a Regulatory Conference with International Isotopes on Jan. 30 to Discuss Two Proposed Violations**

The Nuclear Regulatory Commission will hold a regulatory conference on Jan. 30 with officials from International Isotopes of Idaho Falls, Idaho, to discuss the safety significance of two proposed violations.

The proposed violations, identified in a December 2023 [inspection report](#), involve importing, receiving and transferring radioactive material without appropriate authorization in NRC licenses. The company uses radioactive materials in the manufacture of devices for medical and industrial applications.

The meeting will be held at the NRC's Region IV office at 1600 East Lamar Blvd., Arlington, Texas, beginning at 8 a.m. Central time. The meeting [notice](#) has information detailing how the public can participate in the meeting by phone or online.

Members of the public will have an opportunity to ask questions of the NRC staff or make comments about the issues discussed following the business portion of the meeting; however, the NRC staff is not soliciting comments pertaining to regulatory decisions.

During the enforcement conference, company representatives will have the opportunity to provide their perspective or additional information, including any actions planned or completed to prevent recurrence of the issues, before the agency makes its final enforcement decision.

No decisions on the final safety significance or any potential NRC actions regarding the proposed violations will be made at the meeting.
