We have the text just haven't had the opportunity to respond. Dropping everything we do in a comprehensive radiation control program beyond just a NRC agreement is not our process but I am stopping everything I'm doing to respond to this, basically a none-issue in Nevada as I believe we have a protocol in place that is more restrictive than just using Reg. Guide 1.86 or tying release criteria to a level above background.

Was in Las Vegas last week hosting a national conference, in fact, participated in the hour-long teleconference that I suggested through Ed Bailey with Mike Mobley while sitting on the floor under a pay phone in the middle of a casino/hotel where we hosted the meeting.

Have seen the Meserve letters to the three cosigners of the letter to Ms. Dicus. Does this buy all of us some time? Will remain diligent to respond to the definitions, etc. today and have most of the balance of the questions coming together now. Look for telefaxed text to support our response.

Supposed to be on a plane yet today for a required training at the Nevada Test Site this week but again am stopping things to respond to this request.

Stan Marshall
