January 3, 1999

Mr. Harold W. Keiser President and Chief Nuclear Officer PSEG Nuclear LLC Post Office Box 236 Hancocks Bridge, NJ 08038

SUBJECT: MID-CYCLE PERFORMANCE REVIEW AND INSPECTION PLAN -HOPE CREEK NUCLEAR PLANT

Dear Mr. Keiser:

On December 13, 1999, the NRC staff reviewed the plant performance of the Hope Creek Nuclear Plant during June 1 - November 30, 1999, as reflected in the performance indicators and inspection results, in order to integrate performance information and to plan for inspection activities at your facility through July 31, 2000. The purpose of this letter is to inform you of our plans for future inspections at your facility so that you will have an opportunity to prepare for these inspections and to inform us of any planned inspections which may conflict with your plant activities.

Our review of performance at Hope Creek noted that all performance indicators (PIs) and inspection areas were green (licensee response band). Therefore, we plan to perform only baseline inspections at Hope Creek over the next seven months. The Salem emergency preparedness (EP) program, a program common to Hope Creek, did have a white inspection finding (increased regulatory response band). The performance issue in the EP area related to untimely declaration of emergency events and was described in NRC Inspection Reports 05000272 & 0500031/99009 and 05000354/99007, both dated December 28, 1999. In addition, up until October 1999, there were two Hope Creek PIs which exceeded the white threshold (i.e., *Protected Area Security Equipment Performance Index* and *Safety System Unavailability, RCIC*), but these PIs were based on performance concerns which had been previously addressed.

This letter advises you of our planned inspection effort resulting from the Hope Creek mid-cycle performance review. Enclosure 1 lists the scheduled inspections that are planned through July 31, 2000. The inspection plan is provided to minimize the resource impact on your staff, and to allow for scheduling conflicts and personnel availability to be resolved in advance of inspectors arriving onsite. Routine resident inspections are not listed due to their ongoing and continuous nature. The last few months of the inspection plan are tentative and will be addressed at the end-of-cycle performance review in April 2000, which we expect to issue to you in May 2000.

Mr. Harold W. Keiser

In accordance with 10 CFR 2.790 of the NRC's "Rules of Practice," a copy of this letter and its enclosure will be placed in the NRC Public Document Room (PDR). If circumstances arise which cause us to change this inspection plan, we will contact you to discuss the change as soon as possible. Please contact Glenn Meyer at 610/337-5211 with any questions you may have regarding this letter or the inspection plan.

Sincerely,

Original Signed by:

Glenn W. Meyer, Chief Projects Branch No. 3 Division of Reactor Projects

Page: 1 of 4 0/03/2000 11:20:04 IR Report 4 Report 4 Region 1 HOPE CREEK	Source ID Type Comensione Determination	1990007 NRC FIN Other N/A scussed: scussed: HOPE CREEK 1	11/23/1999 1999008 Licensee FIN Other NA CONCERNS NOTED WITH INEFFECTIVE CORRECTIVE ACTIONS FOR HUMAN PERFORMANCE ERRORS D No significant findings identified; however, there was some concern regarding the # of human performance errors (HPEs) that occurred in all departments over the past 2 years. PSEG & NG determined that ineffective corrective actions (CAs) regarding HPEs were attributable to some narrowly focused root causes analyses or to poor correlation of causes with CAs. Since improvement plans were being developed, it was too early to assess	08/29/1999 1999005-01 NRC NCV Mitigating Green DEGRADED FIRE PROTECTION BARRIER IN THE 117 ELEVATION CABLE SPREADING ROOM Systems Or (CSR). The inspectors identified a long-standing degraded fire protection barrier in the 117" elevation cable spreading room of cabin valve that provided a vent path and would have degraded the effectiveness of the automatic CO2 fire supression system. The NRC staff used the significance defermination process (SDP) and determined that file longstanding problem had a minimal impact on safety due for medium degradation of the automatic CO2 supression system, and the low likelihood of a fire in the CSR. This issue was treated as a non-clied violation. This problem was characterized as a "green" finding due to far very low safety significance and the con-clied violation.	08/29/1999 1999005-02 NRC NC NC	08/29/1999 1999005-04 Licensee NCV Mitigating Systems Green LICENSE CONDITION VIOLATION - CLASS-JE BATTERY CHARGING OPERATION 08/29/1999 1999005-04 Licensee NCV Mitigating Green 08/29/1999 1999005-04 Licensee NCV Mitigating Green License NCV Mitigating Green Technicians did not provide adequate fuse protection and isolation for a non-safety-related single cell battery Systems Technicians did not provide adequate fuse protection and isolation for a non-safety-related single cell battery Systems Technicians did not provide adequate fuse protection and isolation for a non-safety-related single cell battery Systems Technicians did not provide adequate fuse protection and isolation for a non-safety-related single cell battery Systems Technicians did not provide adequate fuse profection and isolation for a non-safety-related single cell battery Dockets Discussed: Maximise file cell batterion Maximise file cell batterion Maximise file cell battery 05000354 HOPE CREEK 1 This issue was characterized as a "green" finding as the issue had minimal impact on safety as determined by the SDP because the batteries were able to properly perform their safety function. Maximise file cell batteries were able to properly perform their safety function.		1 of 4 1 of 4 1 of 4 1 of 4 1 of 4 1 of 4 1 of 9 1 0354 HOP 1 999 1 99			Cornei Co		 In THE REPORTED DATA FOR THE REACTOR COOLANT d data for the Reactor Coolant System Specific Activity Pl. Date	Source	₽	Type	Cornerstone	Significance Determination	Item Title Item Description/Significance
06/14/1999	1999004	NRC	NIL NIL	Mitigating Systems	Green	POOR RISK MANAGEMENT DURING STATION SERVICE WATER (SSW) LOOP OUTAGE
Dockets Discussed	Dockets Discussed: 05000354 HOPE CREEK 1					The inspectors identified poor risk management administration during a risk significant B station service water (SSW) loop outage. PSEG appropriately determined that the B SSW loop outage was in Hope Creek's higher risk significant category (red) for out-of-service equipment. However, PSEG did not address this higher risk condition properly. In that schedulars did not develop administrative controls and operators did not plan any controls regarding possible adverse equipment actions. There were no actual consequences in that the loop outage was completed as planned. This event was classified as a green finding due to the lack of actual consequences and the short duration of the evolution.
11/28/1999	1999007-01	NRC	NCV	Barrier Integrity	Green	INADEQUATE ACCEPTANCE CRITERIA FOR THE CLOSING TIME FOR THE INBOARD MAIN STEAM I INF I
Dockets Discussed: 05000354 HOPE CRI	Dockets Discussed: 05000354 HOPE CREEK 1					NRC inspectors identified inadequate acceptance criteria for the closing time for the inboard main steam line isolation valves (MSIvs). PSEG had performed a design change and lowered the primary containment instrument gas compressor start set performed a design change calculated a more restrictive MSIV closing time during test conditions to ensure that the MSIVs could close within technical specification (TS) requirements. However, the stroke time test acceptance criteria was not updated. This issue was a non-cited violation. (Section 1R22)
						The safety significance of this issue was low because the actual closing times were within the new calculated value.
11/28/1999	1999007-02	Licensee	NCV	Barrier Integrity	Green	OPERATORS FAILED TO ADEQUATELY PERFORM PRIMARY CONTAINMENT INTEGRITY VERIFICATIONS Operators identified that they failed to adequately perform primary containment integrity verifications for 11 valves
Dockets Discussed: 05000354 HOPE CREEK 1	iussed: IPE CREEK 1					40A4.4) 40A4.4) The NRC staff determined that this deficiency had low safety significance based on the valves being closed when property verified later and other administrative systems confirming the valves' closed positions during the period
08/29/1999	1999005-03	Licensee	NCV	Barrier Integrity	Graen	d imposed valued date. License condition vici Ation - Obebation at beniloed her number in the measure
Dockets Discussed: 05000354 HOPE CRI	Dockets Discussed: 05000354 HOPE CREEK 1					Control room operators failed to appropriately identify abnormal lineups in the primary containment instrument Control room operators failed to appropriately identify abnormal lineups in the primary containment instrument gas (PCIG) and feedwater heating systems after a reactor reciculation runback. The operators failure to freedwater heating systems after a reactor reciculation runback. The operators failure to promptly correct these abnormal lineup, the plant was returned to 100% power with feedwater inlet temperature at a reduced temperature. The neuced feedwater inlet moneration with reduced feedwater inlet performance and placed additional train on the tuel barrier during the recovery to full power. Reactor anginees did not effectively monitor the plant recovery and contributed to the encor in operation with reduced feedwater inlet the fuel barrier. The NRC inspectors noted that operation at reduced feedwater finite by a different alarm 45 minutes after the fact. The abnormal PCIG lineup was then promptly corrected by the operations.

08/29/1999	1999005	NRC	FIN	Miscellaneous	N/A	INSPECTORS IDENTIFIED SEVERAL ERRORS IN HISTORICAL PI DATA AND ONE ERROR IN RECENT DAT
Dockets Discussed: 0500354 HOPE CRE	Dockets Discussed: 05000354 HOPE CREEK 1					The inspectors identified several errors in historical data and one error in recent data (since the start of the pilot program and NRC PI submittal) for the Safety System Unavailability, Residual Heat Ramoval System performance indicator (P). The NRC inspectors determined that the RHR unavailability remained green (less than 2%) and changed to about 1.3% from 0.5%. The historical errors were carried forward from an old PSEG than 2%) and changed to about 1.3% from 0.5%. The historical errors were carried forward from an old PSEG than 2%) and changed to about 1.3% from 0.5%. The historical errors were carried forward from an old PSEG that 2% and changed to about 1.3% from 0.5%. The historical errors were carried forward from an old PSEG that an 2% and changed to about 1.3% from 0.5%. The historical errors were carried forward from an old PSEG that a support system unavailability. PSEG initiated Notification 20003722 to correct the RHR unavailability PI, verify all previous NRC PI submittals, and improve the verification processes and validity of future PIs. The Significance Determination Process does not apply to this finding.
07/11/1999	1999004	NRC	II	Miscellaneous	NA	HISTORICAL DATA FOR THE SAFETY SYSTEM UNAVAILABILITY REPORTING FRROR
Dockets Discussed: 05000354 HOPE CR	Dockets Discussed: 05000354 HOPE CREEK 1					The inspectors identified a reporting error in historical data for the safety system unavailability, heat removal system performance indicator (PI). The error related to an incurvate estimate of the time the system was required to be available in 1997. The error caused a small increase in this white PI and did not result in the yellow threshold being exceeded. PSEG corrected the error in the next PI submittal. The Similificance Determination Droves does not only to the more the source does does does not only to the next PI submittal.

United States Nuclear Regulatory Commission Revised Oversight Process PLANT ISSUE MATRIX BV Commistene

AVs are apparent violations of NRC Requirements that are being considered for escalated enforcement action in accordance with the "General Statement of Policy and Procedure for NRC Enforcement Action" (Enforcement Policy), NUREG-1600. However, the NRC has not reached its final enforcement decision on the issues identified by the AVs and the PIM entries may be modified when the final decisions are made.

URIs are unresolved items about which more information is required to determine whether the issue in question is an acceptable item, a deviation, a nonconformance, or a violation. A URI may also be a potential violation that is not likely to be considered for escalated enforcement action. However, the NRC has not reached its final conclusions on the issues, and the PIM entries may be modified when the final conclusions are made.

Item Type (Compliance,Followup,Other), From 06/01/1999 To 11/30/1999
