I recently read that radioactive contaminants were proposed for household products. I must have misread the article because I cannot believe that this is the way you propose to "dispose" of this hazardous waste! If being shot into space, buried underground, or dropped undersea are unsatisfactory ways of disposal, what makes you think that being put into our living rooms is an option?

OPEN  
RULE  
ADJUD

Man is killing man (and nature) as it is; must we help? Nowadays, it is not "if" we contract cancer, it is when and where it will surface.

DOCKET NUMBER  
PROPOSED RULE **PR 20**  
(64FR35090)

My final comment is how much, if any, of it do you want in your house or your children's houses?

Please reconsider.
