'99 DEC 22 09:00

Dear Chairman,

I am shocked to discover that the N.R.C. is seriously considering to allow the recycling of waste containing ionizing radiation (at any level) into any product that comes in contact with anything living, let alone consumer goods. My sense of shock is compounded by the fact that there has been no earnest attempt to have a public forum on an issue as grave as this is.

OF
ADJUTANT

DOCKET NUMBER
PROPOSED RULE PR 20
(64FR35090)

Am I misguided in my assumption that it is the mandate of the N.R.C. to protect the citizens of the U.S. and population of the earth from this type of scheme?

Lets make school desks for our children out of this material. Dust off those old "duck and cover" film clips. Have we learned nothing of the effects of radiation in the last few decades? If the children don't want these desks, perhaps there is a government agency that could redo their executive offices.

PLEASE STOP THE SCHEME TO RECYCLE NUCLEAR WASTE! At the very least allow for a real debate on an issue that directly and permanently affects all of us.

Glowing Mad,

George Boniface
