N.R.C. Staff,
I write to ask you to review and
reconsider your proposed standards for selling
nuclear waste to manufacturers. I understand
that some of this material has already been
sold to companies who are making products
for consumption, or rather for sale and that
these products carry no labeling. All
consumers deserve to know what they are
buying. However, the real concern is that
nuclear waste would ever be considered a
'sleeping profit'. Please there is no acceptable
dose of radiation. I ask that you support the people of
the U.S.A. rather than business interests.
