DOCKETED  
USNRC

'99 DEC 27 P5:23

OFFICE OF  
PUBLIC  
ADJUSTMENT

December 21, 1999

Chairman Richard Meserve  
U.S. Nuclear Regulatory Commission  
Washington, DC 20555

DOCKET NUMBER  
PROPOSED RULE **PR 20**  
**(64FR35090)**

Dear Secretary Meserve,

I am writing to ask the Nuclear Regulatory Commission to isolate radioactive wastes and materials and anything they contaminate, no matter what level. The radioactive legacy of atomic weapons and energy production should be isolated from the public and the environment.

The NRC should also extend the comment period on releasing radioactive waste into commerce to at least September 2000. This issue is too important to act hastily upon and it should be fully debated by the public. Several more months are necessary to engage American consumers and determine if they want their families put at risk by exposure to radioactive household items.

The public has spoken before on this issue. We will do not want nuclear power and weapons wastes "released," cleared", deregulated, exempted, generally licensed, designated "de minimis," "unimportant," or BRC-below regulatory concern, or by any other creative, direct or deceptive means, allowed out of nuclear facilities and into the market-place or the environment, at any level.

Using radioactive wastes in consumer products poses unnecessary, avoidable, involuntary, uninformed risks. The consumers, the producers, the raw materials industries don't want these radioactive wastes or risks.

It is not credible to believe computer models can calculate and accurately predict any or ALL of the doses to the public and the environment from all of the potential radioactivity that could be released over time. Projections of "acceptable" or "reasonable" risks from some amount of contamination being released are meaningless and provide no assurance. We don't trust the nuclear generators to monitor their own releases.

No matter what level the NRC sets for allowable radiation risk, dose or concentration, it will be difficult to impossible to measure, verify and enforce. Who is liable if the "legal " standards NRC intends to set are violated? For decades the public has clearly opposed releasing radioactive materials into commerce. We continue to do so.

Naturally occurring background radiation cannot be avoided but its presence in no way justifies additional, unnecessary, involuntary radiation exposures, even if those exposures might be equal to or less than background. Nor does it justify shifting the economic liability from the generators of radioactive wastes and materials to the economic and health liability of the recycling industries,

PDR PR 20 64FR 35090

DS10

the public and the environment.

We fully support the complete opposition and "zero tolerance" policies of the metal and recycling industries, the management and the unions. We appreciate their efforts, not only in opposition to legalization of radioactive releases, but in their investment in detection equipment and literally holding the line against the radioactive threat to the public. They should not have to be our de-facto protectors. The NRC, DOE, and EPA must act to prevent the dissemination of radioactive wastes into recycled materials and general commerce. The problems that have been experienced by the steel recycling industry with "generally-licensed sealed sources" getting into their facilities and costing tens of millions of dollars to clean up should serve as a warning not to let any other radioactive wastes and materials out of regulatory control.

The fact that radioactive waste is already getting out should not be used to justify legal levels allowing more. The NRC, EPA, and DOE should prevent future and correct past release. The fact that other countries are releasing radioactive materials is no excuse for us to legalize it. The United States should take the lead in preventing contamination of the international marketplace. We protect ourselves best by no facilitating international radioactive commerce.

The fact that it is difficult and expensive to monitor and detect radiation does not justify its release. It is all the more reason to prevent any wastes getting out, so we don't have to check routinely for contamination. The nuclear industry and regulators should be aware of what materials at reactor and weapons sites are wastes and which have been contaminated. Those materials must be isolated, not released at any level.

The mindset of the NRC appears convinced that it should legalize radioactive wastes being recycled into the marketplace. The NRC has stated in its staff requirements memo that the standard must allow "releases" to take place and that all radioactive materials will be eligible for "clearance." This means that the NRC is not seriously examining all of the options available, such as non-release, even though the National Environmental Policy Act (NEPA) requires all options to be considered.

Furthermore, the NRC is relying on a private contractor called science applications International Corporation (SAIC) to prepare the technical basis for the proposed regulation. This is a blatant conflict of interest. The NRC has not publicly disclosed the relevant economic interests of SAIC. The NRC has not notified the public that SAIC has simultaneously been working with or for other corporations with substantial economic interests in the commission's determination in this rule-making.

In conclusion, the comment period should be extended and the NRC should serve the interests of the public instead of the nuclear industry and prohibit the release of radioactive materials into commerce.

Sincerely,

Mary Ellen Gondeck, SSJ  
Coordinator
