re: scoping of NRC proposed rule for RADIOACTIVE "RELEASE" and "RECYCLING" into the marketplace, regular landfills, incinerators, etc.
64 FR 35090, 6/30/99
ATTN: NRC Rulemaking and Adjudications Staff

To whom it may concern:

For the record, let it be known that I oppose such rulemaking as it would allow radioactivity to be considered safe at a certain threshold, and set a precedent for future revision of such a threshold. No responsible scientist will concede that there is such a thing as a safe amount of radiation exposure.

In keeping with the above statement, I ask that you 1.) prohibit radioactive releases in the United States, and 2.) report and recapture already released wastes and materials.

Sincerely,

Amy J. Callner
