Re: Radioactive Contamination

Gentlemen:

We understand that today is the last day to comment on your proposal to recycle and reuse radioactively contaminated materials from the old nuclear power plants and weapons facilities by introducing these dangerous materials into thousands of items used daily by the U. S. population.

The article we read in the Atlanta Constitution editorial page on Dec. 20, 1999, by Sara Barczak states that your purpose for exposing the entire population to these materials is to cut costs of closing down these old facilities, and that, by your own calculations, fatal cancer could result for 108,000 people. This amounts to approximately 37% of the battle casualties in World War II.

We are unalterably opposed to your proposal to destroy lives in your attempt to "cut costs".

Your proposal is unacceptable, and the American people will so advise you if given the opportunity to know the facts of this proposal before you implement it.

We understand that you have already released over one million pounds of these dangerous materials into the marketplace without our knowledge and consent. We would like to know who has received these materials and what use is proposed for it. Please advise as soon as possible.

We have spoken with a number of people who have read this article and have found no one who can understand how our elected or appointed officials can kill the citizens to save money.

Yours very truly,

*Louise C. Stubbs*

(Mrs.) Louise C. Stubbs
