Subject: U.S. NRC re: scoping of NRC proposed rule for RADIOACTIVE "RELEASE" and "RECYCLING" into the marketplace, regular landfills, incinerators, etc.

To the U.S. NRC re: scoping of NRC proposed rule for RADIOACTIVE "RELEASE" and "RECYCLING" into the marketplace, regular landfills, incinerators, etc.
64 FR 35090, 6/30/99
ATTN: NRC Rulemaking and Adjudications Staff

Please do not allow release/recycle/clearance/deregulation of radioactive wastes/radioactive metals or materials into the marketplace or workplace. It is unconscionable to foist off radioactive doses to the unsuspecting and unprotected public, when it is preventable. Most industries and most homes do not have geiger counters. They should not need them. It is incredible that we even need to state this. It is well documented that radiation can harm living cells. There is no need to give additional doses to unaware people or other living creatures. We are already getting dosed with background radiation, and through xrays, medical tests, etc..

Sincerely

Kay Cumbow
