Secretary,
U.S. Nuclear Regulatory Commission
Washington, D. C. 20555

DOCKET NUMBER
PROPOSED RULE **PR** 20
(64FR35090)

Attn: Rulemaking and Adjudications Staff

Dear People,

It has been brought to my attention that you are considering legalizing the recycling of radioactive materials into new products. These products would then be available for use by the general population. Could this possibly be correct? I am under the distinct impression that radioactive materials and waste products must be buried miles deep in the ground for decades before they can be considered somewhat safe. ARE YOU PEOPLE CRAZY???

I am strongly opposed to the legalization of recycling radioactive materials into new products for use by the general population. I believed that your responsibility was to regulate and control the nuclear industry. This action you are considering would be a total violation of your duty to the American public.

Sincerely,

Milt Kagan
