OFFICE OF THE
Nuclear Regulatory Commission
Washington, D.C. 20555-0001

Dear Sir or Madam:

I could not believe my ears recently when I heard that low-level radioactive materials are being recycled for use in consumer products.

We know that there is no safe level of radioactivity, and yet more ~~more~~ low-level radiation is being added to what we are already exposed to.

Obviously, once the radioactive metal has been recycled, there is no way of tracing it, so each individual citizen is unaware of whether s/he is using 0 or 100 items with this added radioactivity.

Is the lack of means to dispose of radioactive waste a problem? Yes. Is dumping low-level radioactive materials into consumer products an acceptable solution? NO, it is not.

I protest vehemently.

Sincerely,
Hildegard Hannum
