NRC Chairman Richard Meserve  
Rulesmaking and Adjudications Staff  
U.S. NRC  
Washington D.C., 20555

OFFICE OF THE  
RULEMAKING AND  
ADJUDICATIONS STAFF

Dear Chairman Meserve,

<sup>AM</sup>  
I writing this letter as a private citizen and grandmother of seven, to ask you to not release low-level radioactive materials for unrestricted use in the manufacture of consumer items. Certainly standards could be set to prevent radioactive materials from showing up in kid's braces, cooking utensils, medical implants, toys, foundations,--anything.

There is no safe level of radioactivity to human beings. Every amount of exposure increases a person's risk for cancer and other problems. I urge you to not only keep the current limits in place but to recall radioactive materials that have already been released.

With a great deal of concern,

*Lenore Hauser*
