Subject: "Release" of Radioactive Materials.

DOCKETED  
USNRC

'00 JAN 12 A7:29

Dear Sir:

It is vitally important that you do everything that you can to stop the "release" of radioactive materials into commerce.

There is already too many problems with Cancer, Leukemia and other health concerns to add more ionizing radiation into the environment.

You must not let the U. S. Nuclear Regulatory Commission legalize this "release" just to let private companies make a profit by selling contaminated materials. They must be made to pay to have this material isolated from the environment by a licensed radioactive facility.

That radioactive material which has already been released must be tracked down and recaptured to assure that it does not contaminate the environment.

I also expect that you will work for an International Ban prohibiting this radioactive "release."

OFFICE OF THE  
FULL-TIME  
ADJUTANT GENERAL
