January 31, 2000

Mr. Thomas F. Plunkett President - Nuclear Division Florida Power and Light Company P.O. Box 14000 Juno Beach, Florida 33408-0420

SUBJECT: TURKEY POINT UNITS 3 AND 4 - REQUEST OF ADDITIONAL INFORMATION

REGARDING SOLUBLE BORON CREDIT FOR SPENT FUEL POOL AND FRESH FUEL RACK CRITICALITY ANALYSES (TAC NOS. MA7262

AND MA7263)

Dear Mr. Plunkett:

By letter dated November 30, 1999, Florida Power and Light Company's (FPL's) proposed technical specification changes for Turkey Point Units 3 and 4. The proposed changes would permit taking credit for the soluble boron in the spent fuel pool and fresh fuel rack criticality analyses in order to accommodate degradation of the boraflex panels in the fuel storage racks.

The NRC staff has reviewed FPL's submittal and has determined that additional information is needed by the staff before it can complete its review. The enclosed request for additional information (RAI) has been discussed with S. Mihalakea of your staff. A target date for your response has been agreed upon to be 30 days from your receipt of this RAI. Should a situation occur that prevents you from meeting the target date, please contact me at (301) 415-1496.

Sincerely,

/RA/

Kahtan N. Jabbour, Senior Project Manager, Section 2 Project Directorate II Division of Licensing Project Management Office of Nuclear Reactor Regulation

Docket Nos. 50-250 and 50-251

Enclosure: Request for Additional Information

## RELATED TO THE AMENDMENT OF THE TECHNICAL SPECIFICATIONS FOR SOLUBLE BORON CREDIT FOR SPENT FUEL POOL AND FRESH FUEL RACK CRITICALITY ANALYSES

## TURKEY POINT UNITS 3 AND 4 FLORIDA POWER AND LIGHT COMPANY DOCKET NOS. 50-250 AND 50-251

- 1. The NRC staff safety evaluation report contained in WCAP-14416-NP-A presents the required technical specifications for use with the approved soluble boron credit methodology. The Fuel Storage Criticality specifications in the Design Features Section for both k-eff less than 1.0 if fully flooded with unborated water and for k-eff less than or equal to 0.95 if fully flooded with borated water require reference to WCAP-14416-P for a description of the uncertainties included. Therefore, proposed technical specifications 5.6.1.1.a and 5.6.1.1.b should include the phrase "which includes a conservative allowance for uncertainties as described in WCAP-14416-P."
- 2. Please describe the administrative procedures used to select the appropriate assemblies for storage in the burnup-dependent racks in Region 2.
- Attachment 5 describes the criticality analysis performed with a reduced B-10 loading in the degraded boraflex. The assumptions in the analysis include the following: Region 1: 0.009 g/cm² aborber B-10 loading and 0.0351 inch thickness Region 2: 0.006 g/cm² absorber B-10 loading and 0.051 inch thickness

The analysis based on these assumptions results in a K  $_{\rm eff}$  less than 1.0 with no soluble boron. Please provide your plan to verify that the boraflex panels have not degraded beyond the assumed thicknesses.
