**RE: DEQ/LQD Letter Dated December 29, 1999, Mechanical Integrity Testing
Schedule for Christensen Ranch and Irigaray, Mine Permit No. 478**

Dear Mr. Mooney:

In response to the request in the above referenced correspondence, please find enclosed a well mechanical integrity testing (MIT) schedule for this year. We have had two test units working full time since December 27, 1999. As indicated on the schedule we will be completely up to date with the MIT program by May, 2000. Also enclosed is a list of wells for which the integrity testing was or is currently behind schedule. Both the most recent MIT date and the last date of use are noted. Note that any injection wells requiring integrity testing that had been in use recently were exclusively involved in the injection of clean permeate as part of restoration efforts. Please call me if you have any questions concerning the enclosed schedule.

Sincerely,

T. W. Hardgrove
Manager, Environmental and Regulatory Services
