DISCUSSION TOPICS

1. DESIGN REQUIREMENTS

- a. The bases for the establishment of each analytical value used to demonstrate the ability of the high pressure safety injection, auxiliary component cooling water, component cooling water, chemical and volume control, essential chilled water, and emergency feedwater systems to perform their design bases functions.
- b. The methodology used to develop the analytical values.
- c. The assumptions used in determining the nominal trip setpoints or the analytical values required to meet the design bases and the steady state operating values.
- d. The methods used to demonstrate that the systems are able to meet their design bases requirements.
- e. The methods for demonstrating the operability of the systems (if different from meeting the design bases).
- f. Where uncertainties are specifically addressed.

2. WATERFORD ONGOING GRADED APPROACH TO THE ESTABLISHMENT OF DESIGN CRITERIA

- a. Overview of the approach.
- b. Progress of developing and implementing the graded approach.
- c. Any findings during the implementation of the graded approach.
- d. Proposed schedules for completion.
- e. The screening process used in this process.
- f. Breakdown of the screening results.
- g. Parameters that have been evaluated and resolved.

3. OTHER APPROACHES TO DEVELOPING SETPOINTS

- a. Entergy's Design Engineering Administrative Manual IC-G-001-02 (with references)
- b. ANSI/ISA-S67.02
