February 2, 2000

Mr. Dwight Chamberlain, Director
Division of Nuclear Material Safety
Region IV
United States Nuclear Regulatory Commission
611 Ryan Plaza Drive
Suite 400
Arlington, Texas 76011

Subject: Docket No. 40-8943
License No. SUA-1534

Dear Mr. Chamberlain:

Enclosed please find one copy of the Semiannual Radiological Effluent and Environmental Monitoring Report for the Crow Butte Uranium Project. The report is provided in accordance with License Condition 12.1 of Source Materials License SUA-1534. This report covers the third and fourth quarters of 1999.

If you have any questions concerning the report, please feel free to call me at (308) 665-2215.

Sincerely,
CROW BUTTE RESOURCES, INC.

Michael L. Griffin
Manager of Environmental and Regulatory Affairs

Enclosures – As Stated

c: Mr. John Surmeier – USNRC, Office of Nuclear Material Safety and Safeguards

CROW BUTTE RESOURCES, INC.

CROW BUTTE URANIUM PROJECT

RADIOLOGICAL EFFLUENT AND ENVIRONMENTAL MONITORING REPORT

for

THIRD AND FOURTH QUARTERS, 1999

USNRC Source Materials License SUA 1534

Table of Contents

1 WATER QUALITY MONITORING DATA

1.1 Excursion Monitoring

Biweekly excursion monitoring in the shallow aquifer and perimeter monitor wells was continued in Mine Units 1 through 6 during the third and fourth quarters of 1999. Biweekly excursion monitoring of the shallow aquifer and perimeter monitor wells for Mine Unit 7 was begun during the period. Copies of the Nebraska Department of Environmental Quality (NDEQ) Mining Monitoring Reports (MMR's) are included in Appendix A. These reports provide the minimum, maximum and mean monitoring data for each monitor well during both calendar quarters. Complete monitoring results are readily available on site for inspection.

On July 1, 1999, perimeter monitor well CM6-6 in Mine Unit 6 was placed on excursion status. CBR implemented corrective activities including termination of injection in selected wells adjacent to the monitor well. These actions resulted in CM6-6 being returned to normal status on September 23, 1999. CBR provided reports of the excursion in accordance with License Condition 12.2.

On September 20, 1999, injection well I-567 in Mine Unit 4 failed the five-year mechanical integrity test (MIT). An investigation indicated that a casing failure had occurred at the 40-foot level in the well. CBR installed monitoring wells adjacent to I-567 that indicated the failure had not caused a vertical excursion that affected the local aquifer. The results of the I-567 testing and investigation were submitted to NRC on October 12, 1999.

Biweekly excursion monitoring was also begun during the period for post-restoration perimeter monitor wells for Mine Unit 1 following NDEQ approval of restoration. These wells and the UCL values assigned to them were approved by NDEQ. NRC was notified of initiation of this sampling on December 28, 1999.

1.2 Water Supply Wells and Surface Water

Summary sheets of quarterly radiological analytical data for the reporting period from all surface waters and water supply wells within one kilometer of the active wellfield boundary are included in Appendix B. The reported radiological data are within the expected ranges for each well or stream.

2 OPERATIONAL

2.1 Production Data Summary

Mining operations continued through the third and fourth quarters of 1999. The average operating production flow rate was 4348 gpm for the third quarter and 4408 gpm for the fourth quarter. The annual average production flow for 1999 was 4397 gpm. Injection and production totals from the totalizers and the calculated bleed totals for the reporting period are included in Appendix C.

The main injection trunkline is equipped with a continuous pressure sensor. The pressure sensor is set to alarm below the 100-psi injection pressure limit contained in the NDEQ UIC Permit. The average and maximum injection pressures for each wellhouse are included in Appendix D in the Wellfield Injection Pressure table.

The chemical analysis summaries for both the injection and production streams are included in Appendix E. The daily chemical analyses were used to calculate a monthly average during the reporting period. The average monthly chemical analysis was calculated for calcium, sodium, chloride, sulfate, and total carbonate.

2.2 Wastewater Summary

The total volume of wastewater discharged to the ponds was 601,250 gallons during the third quarter and 441,420 gallons during the fourth quarter. An additional 621,195 gallons of water generated from well workovers, well development, and well maintenance activities were discharged to the ponds during the second half of 1999. Currently, all five evaporation ponds contain wastewater.

Wastewater that is not disposed of in the evaporation ponds is injected into the Deep Disposal Well (DDW). Currently, the well is operated on a continuous basis and 13,255,874 gallons of wastewater was injected into the well during the second half of 1999. Operational and monitoring data for the DDW is reported to the NDEQ in the Monthly Monitoring Report (MMR). Copies of the MMRs for the third and fourth quarters of 1999 are included in Appendix F.

2.3 Effluent Release

License Condition No. 12.1 of SUA-1534 requires that CBR report the results of effluent releases to the environment. In the Application for Renewal of Source Materials License SUA-1534, submitted December 1995, Table 7.3(A) presented calculations of the annual radon emissions for

the Crow Butte Plant. These calculations assumed a 7.04×10^{-4} Curies/m^3 radon release from leaching operations and are the basis for the radon release calculations for the second half of 1999.

During the third quarter production occurred at an average flow rate of 4348 gpm (16,457 lpm). During the fourth quarter production occurred at an average flow rate of 4408 gpm (16,684 lpm). Production was maintained continuously for 92 days for the third quarter with the exception of 3 hours of downtime. This represents a third quarter operating factor of 99.86%. Production was maintained continuously for 92 days for the fourth quarter with the exception of 7.5 hours of downtime. This represents a fourth quarter operating factor of 99.66%. The production flow for the third quarter would result in a calculated radon release of 1,105 Curies. The production flow for the fourth quarter would result in a calculated radon release of 1,120 Curies. Calculations for radon release from production operations are shown in Appendix G.

Additional wells were brought on line during the second half of 1999. Calculations for the start-up of 7.48 acres of a new wellfield are shown in Appendix G. The calculated radon released from start-up of 7.48 acres is 10 Curies.

The total radon emission due to leaching operations from the Crow Butte plant for the second half of 1999 was 2,235 Curies. When combined with the calculated release of 2,264 Curies for the first half of 1999, the total calculated radon release from leaching operations for 1999 is 4,499 Curies. This calculated annual release rate is comparable with the releases estimated in CBR's License Renewal Application.

Radon is also released from restoration activities. For restoration water that is treated by ion exchange only, the radon concentration is 0.697 µCi/l. Of the total restoration production flow it is assumed that 25% of the radon is released through wellfield loss and 10% of the remaining radon is released during pressurized ion exchange treatment. For water that is treated by reverse osmosis, it is assumed that 100% of the remaining radon is released. For water treated by reverse osmosis the radon concentration is 0.470 µCi/l after adjusting for wellfield loss and ion exchange loss.

During the second half of 1999, a total of 58,252,400 gallons (220,485,334 l) of restoration water was produced from Mine Units 2 and 3. Based upon an estimated radon concentration of 0.697 µCi/l, the total amount of radon in the restoration solution was calculated to be 154 Curies as shown in Appendix G. The estimated release of radon through wellfield loss at 25% of this total was 39 Curies. The plant loss for ion exchange treatment of the restoration water is estimated at 10% of the remaining radon, or 12 Curies.

Of the total amount of restoration water produced in the second half of 1999, 23,067,223 gallons (87,309,439 l) of the water was treated by reverse osmosis. The release of radon from reverse osmosis treatment is estimated to be 100% of the remaining radon, after correction for wellfield and ion exchange losses. These corrections result in an estimated radon concentration of 0.470 µCi/l. The total estimated radon release from reverse osmosis treatment was 41 Curies. An additional 3.46

acres of wellfields were placed in restoration during the second half of 1999. Calculations for the start-up of 3.46 acres of a wellfield placed in restoration are shown in Appendix G. The calculated radon released from start-up of 3.46 acres is 4 Curies.

Based upon the calculations shown in Appendix G, the total estimated semiannual radon emission for the second half of 1999 from restoration activities was 96 Curies. This resulted in a total estimated radon release from the Crow Butte project during the second half of 1999 of 2,331 Curies.

2.4 Inspections

Plant operators conduct a daily visual inspection of the evaporation pond areas. Both R&D ponds and commercial ponds Nos. 1, 3, and 4 are inspected. The condition of the fences, pond embankments, and liners are all noted on the inspection form. The depth of water is recorded for all of the cells. Pond freeboard requirements were not exceeded during the second half of 1999.

The Quarterly Evaporation Pond Inspections were conducted for the third and fourth quarters. Copies of these reports are included in Appendix H.

The leak detection standpipes on each cell are checked on a weekly basis. If six inches or more of fluid is present in the leak detection standpipes of the R&D ponds, License Condition No. 11.4 requires that it be sampled and analyzed for conductivity, chloride, alkalinity, sodium and sulfate. The standpipes at the R & D ponds have never exceeded six inches.

License Condition No. 11.4 also requires that if six inches or more of water is present in the leak detection standpipes of the commercial ponds that the water be sampled on a weekly basis and analyzed for specific conductance. In the event that the specific conductance shows an increase above the action level, the water in the standpipe would be analyzed for chloride, alkalinity, sodium, and sulfate in an attempt to verify a leak. At no time during the second half of 1999 did the conductivity of the standpipes of the commercial ponds exceed the action level. The daily pond inspection forms are on file at the plant.

Daily walk-through inspections of all work and storage areas are conducted and the inspection reports are maintained on file at the plant. As required in License Condition 11.5, a weekly inspection by the RSO and the Plant Manager or their designees is conducted to observe general radiation control practices and to review required changes in procedures and equipment. Weekly inspection reports are also on file at the plant.

2.5 Restoration

Restoration activities continued in Mine Unit #2 and Mine Unit #3 during the second half of 1999. Mine Unit 1 is shut-in following completion of the stabilization period and subsequent approval of restoration by the NDEQ. Monthly Restoration Reports, detailing restoration activities and associated water sampling results for the period, are included in Appendix I.

3 ENVIRONMENTAL MONITORING

3.1 Air Monitor Stations

Seven air monitoring stations are used to monitor the Crow Butte Plant. Ambient radon-222 concentrations and radionuclide concentrations in air for each monitoring site are listed in Appendix J. All of the data for both quarters are within the expected ranges.

3.2 TLD Monitors

Environmental TLD monitors are located at each air monitoring station. The results of the area TLD monitors fall within the expected ranges and are listed in Appendix J.

3.3 Stream Sediments

Sediment samples are collected from two locations on Squaw Creek and two locations on English Creek on an annual basis. The sample locations are immediately upstream and downstream of the point where the creeks cross the site boundary. The results of stream sediment samples taken during the second half of 1999 fall within the expected ranges and are listed in Appendix J.

Appendix A

Mining Monitor Reports

Third and Fourth Quarter, 1999

NEBRASKA DEPARTMENT OF ENVIRONMENTAL QUALITY
MINING MONITORING REPORT

Month: July - September Year: 1999

Total volume or water level for reporting period: 564,511,268 gallons injected *
* from individual well injection meters – excluding restoration injection

Quality of Injected Fluid (discuss any significant change in the constituents or concentrations of the injected fluid):

	Chloride (ppm)	Sulfate (ppm)	Sodium (ppm)	Alkalinity** (as ppm $CaCO_3$)	pH (SU)
Minimum	517	955	1203	1335	7.2
Maximum	591	1110	1368	1810	7.9

** Alkalinity = Total Carbonate/1.2

Volume of injected fluid:

Month	Average Daily Injection Commercial (gpm)	Average Daily Injection Restoration (gpm)
July	4193	98
August	4266	112
September	4338	212

1. Have any operational problems occurred over the reporting period? Yes
2. Has any well maintenance (repairs, workovers, etc.) been performed during the period? yes
3. Has any significant change occurred in any of the monitored parameters that might indicate a leak or other failure of any well? no

If the answer to any of the above is yes, describe below.

Question 1: In the preceding Mining Monitoring Reports (MMR), it was reported that a casing leak was found in well I-196-5 during the routine Mechanical Integrity Test (MIT) of that well. Remediation of the area was accepted by NDEQ on August 19.

A casing failure was found in well I-567-13 during the routine Mechanical Integrity Test (MIT) of that well on September 20. Three wells have been installed in the immediate area to determine

whether the casing failure at approx. 40 feet has impacted groundwater. Sample results to date indicate no impact. Investigation of the area continues.

On July 2 an excursion of well CM6-6 was confirmed. The excursion was reported to NDEQ IAW the UIC Permit. Corrective actions were taken which consisted principally of overproduction in the immediate area of Mine Unit 6. These corrective actions were successful in returning the well to normal status with the sample obtained on September 23. Weekly sampling of the well will continue until October 14 IAW the UIC Permit. The analytical results of the sampling performed during the third quarter are attached. A final report of corrective actions was submitted on September 30.

Question 2:

Rig Workovers: 1519, 1497, 415, 1454
Mining wells with casing repaired: None

I CERTIFY UNDER THE PENALTY OF LAW THAT I HAVE PERSONALLY EXAMINED AND AM FAMILIAR WITH THE INFORMATION SUBMITTED IN THIS APPLICATION AND ALL THE ATTACHMENTS AND THAT, I BELIEVE THE INFORMATION IS TRUE, ACCURATE, AND COMPLETE. FURTHER, I CERTIFY AWARENESS THAT THERE ARE SIGNIFICANT PENALTIES FOR SUBMITTING FALSE INFORMATION, INCLUDING THE POSSIBILITY OF A FINE AND IMPRISONMENT.

NEBRASKA DEPARTMENT OF ENVIRONMENTAL QUALITY
MINING MONITORING REPORT

Month: October – December Year: 1999

Total volume or water level for reporting period: 566,685,743 gallons injected *
* from individual well injection meters – excluding restoration injection

Quality of Injected Fluid (discuss any significant change in the constituents or concentrations of the injected fluid):

	Chloride (ppm)	Sulfate (ppm)	Sodium (ppm)	Alkalinity** (as ppm $CaCO_3$)	pH (SU)
Minimum	520	964	1218	1169	7.3
Maximum	608	1080	1371	1488	8.6

** Alkalinity = Total Carbonate / 1.2

Volume of injected fluid:

Month	Average Daily Injection Commercial (gpm)	Average Daily Injection Restoration (gpm)
October	4147	278
November	4342	201
December	4389	119

1. Have any operational problems occurred over the reporting period? No
2. Has any well maintenance (repairs, workovers, etc.) been performed during the period? yes
3. Has any significant change occurred in any of the monitored parameters that might indicate a leak or other failure of any well? no

If the answer to any of the above is yes, describe below.

Question 2:

Rig Workovers: None
Mining wells with casing repaired: I-567

I CERTIFY UNDER THE PENALTY OF LAW THAT I HAVE PERSONALLY EXAMINED AND AM FAMILIAR WITH THE INFORMATION SUBMITTED IN THIS APPLICATION AND ALL THE ATTACHMENTS AND THAT, I BELIEVE THE INFORMATION IS TRUE, ACCURATE, AND COMPLETE. FURTHER, I CERTIFY AWARENESS THAT THERE ARE SIGNIFICANT PENALTIES FOR SUBMITTING FALSE INFORMATION, INCLUDING THE POSSIBILITY OF A FINE AND IMPRISONMENT.

Re: **July 1999 Monthly Monitoring Report for Crow Butte Mine Class 1 Non Hazardous Waste Injection Well, Permit Number NE0206369**

Dear Mr. Miesbach:

Attached is the monthly monitoring report (MMR) data for the Class 1 Injection Well (Deep Disposal Well (DDW)) located at the Crow Butte Mine near Crawford, Nebraska. The MMR is submitted in accordance with Part II, B. of permit number NE0206369.

Table 1 lists the operating statistics from the DDW continuous recording devices for the month. All permit parameters were in compliance for the month.

Table 2 lists the operating statistics based on the daily inspection readings. The daily readings are taken by the process plant operators three times a day and a copy of the actual recording sheet is shown on Table 3. A summary of the weekly grab sample assay results is given on Table 4.

Please contact me if you need additional information pertaining to the DDW monthly monitoring report.

Sincerely,

Steven D. Magnuson
Vice President

Re: **September 1999 Monthly Monitoring Report for Crow Butte Mine Class 1 Non Hazardous Waste Injection Well, Permit Number NE0206369**

Dear Mr. Miesbach:

Attached is the monthly monitoring report (MMR) data for the Class 1 Injection Well (Deep Disposal Well (DDW)) located at the Crow Butte Mine near Crawford, Nebraska. The MMR is submitted in accordance with Part II, B. of permit number NE0206369.

Table 1 lists the operating statistics from the DDW continuous recording devices for the month. All permit parameters were in compliance for the month.

Table 2 lists the operating statistics based on the daily inspection readings. The daily readings are taken by the process plant operators three times a day and a copy of the actual recording sheet is shown on Table 3. A summary of the weekly grab sample assay results is given on Table 4.

Please contact me if you need additional information pertaining to the DDW monthly monitoring report.

Sincerely,

Steven D. Magnuson

Re: **October 1999 Monthly Monitoring Report for Crow Butte Mine Class 1 Non Hazardous Waste Injection Well, Permit Number NE0206369**

Dear Mr. Miesbach:

Attached is the monthly monitoring report (MMR) data for the Class 1 Injection Well (Deep Disposal Well (DDW)) located at the Crow Butte Mine near Crawford, Nebraska. The MMR is submitted in accordance with Part II, B. of permit number NE0206369.

Table 1 lists the operating statistics from the DDW continuous recording devices for the month. All permit parameters were in compliance for the month.

Table 2 lists the operating statistics based on the daily inspection readings. The daily readings are taken by the process plant operators three times a day and a copy of the actual recording sheet is shown on Table 3. A summary of the weekly grab sample assay results is given on Table 4.

Please contact me if you need additional information pertaining to the DDW monthly monitoring report.

Sincerely,

Steven D. Magnuson
Vice President

Radon Release Calculations

Third and Fourth Quarter, 1999

Radon Effluent Release Calculation (Production and Startup)

Third Quarter 1999 Radon Release from Leaching Operations:

$$\left[\left(\frac{7.04E^{-4}\ \text{Curies}}{\text{meter}^3}\right)\times\left(\frac{16{,}457\ \text{liters}}{\text{min}}\right)\times(0.72)\times(92\ \text{days})\times\left(\frac{\text{meter}^3}{1000\ \text{liters}}\right)\times\left(\frac{24\ \text{hours}}{\text{day}}\right)\times\left(\frac{60\ \text{min}}{\text{hour}}\right)\right]=1{,}105\ \text{Curies}$$

Fourth Quarter 1999 Radon Release from Leaching Operations:

$$\left[\left(\frac{7.04E^{-4}\ \text{Curies}}{\text{meter}^3}\right)\times\left(\frac{16{,}684\ \text{liters}}{\text{min}}\right)\times(0.72)\times(92\ \text{days})\times\left(\frac{\text{meter}^3}{1000\ \text{liters}}\right)\times\left(\frac{24\ \text{hours}}{\text{day}}\right)\times\left(\frac{60\ \text{min}}{\text{hour}}\right)\right]=1{,}120\ \text{Curies}$$

Radon Release from Wellfield Startup:

$$\left[\left(\frac{7.04E^{-4}\text{Curies}}{\text{meter}^3}\right)\times(7.48\ \text{acres})\times\left(\frac{4074\ \text{meter}^2}{\text{acre}}\right)\times(1.52\ \text{meters})\times(0.29)\right]=10\ \text{Curies}$$

Total Estimated Radon Emissions from Leaching: 2,235 Curies

Radon Effluent Release Calculation (Restoration)

Second Half 1999 Radon Release from Restoration:

$$(220{,}485{,}334 \text{ liters}) \times \left(\frac{0.697\ \mu\text{Ci}}{\text{liter}}\right) = 154 \text{ Curies (production potential)}$$

$$154 \text{ Curies} \times 0.25 = 39 \text{ Curies (25\% Wellfield Loss)}$$

$$(154 \text{ Curies} - 39 \text{ Curies}) \times 0.10 = 12 \text{ Curies (10\% Ion Exchange Loss)}$$

$$(87{,}309{,}439 \text{ liters}) \times \left(\frac{0.470\ \mu\text{Ci}}{\text{liter}}\right) = 41 \text{ Curies (100\% Reverse Osmosis Loss)}$$

Startup of additional restoration patterns:

$$\left[\left(\frac{7.04\text{E}^{-4}\text{Curies}}{\text{meter}^3}\right) \times (3.46 \text{ acres}) \times \left(\frac{4074 \text{ meter}^2}{\text{acre}}\right) \times (1.52 \text{ meters}) \times (0.29)\right] = 4 \text{ Curies}$$

Total Estimated Radon Emissions from Restoration: 96 Curies

Total Estimated Radon Emissions from Crow Butte Operations, 2nd Half 1999: 2,331 Curies

Appendix H

Quarterly Pond Inspections

Third and Fourth Quarter, 1999

CROW BUTTE RESOURCES, INC.

86 Crow Butte Road
P.O. Box 169
Crawford, Nebraska 69339-0169

(308) 665-2215
(308) 665-2341 – FAX

TO: File
THROUGH: Chuck Miller
FROM: Rhonda Grantham
DATE: September 30, 1999
SUBJECT: Third Quarter Visual Evaporation Pond Inspection

On September 17, 1999 the quarterly visual evaporation pond inspection was performed as required by License Condition No. 11.4 of SUA-1534. The R & D Evaporation Ponds and the Commercial Evaporation Ponds #1, #3, and #4 were all included in the inspection. All ponds are inspected on a daily basis.

1. No apparent settlement or erosion problems with dikes or slopes have occurred at the R & D Ponds. With the exception of very small erosional gullies on the slopes of all of the Commercial Ponds, generally the pond slopes are in good condition. Erosional activity that was discussed in the second quarter report has been repaired. Some new gopher and/or mole activity was evident at the south end of Pond #1 and at the north end of Pond #3. No apparent settlement of dikes or slopes was evident at the Commercial Ponds.

2. The game proof fences and entrance gates at both sets of Ponds appear to be in good condition. The Radioactive Materials signs posted on the fences are visible and readable.

3. No pond or feed line seepage has been noted.

4. The standpipe underdrains of the R & D ponds remain at less than six inches and no sampling has been required. As per License Condition #11.4, on a weekly basis, CBR samples any underdrain of the Commercial Ponds that contains six inches or more of fluid. The samples are analyzed for conductivity and if the sampling results are below the action level no further sampling is necessary. Currently nine of the underdrains are measured at a weekly frequency for conductivity. At no time during the third quarter, 1999, did the conductivity of the underdrains of the Commercial Ponds exceed the action level.

5. Footage markers on all of the ponds are readable. All liners appear to be in good condition.

6. Inspections are performed on all of the ponds on a daily basis. Inspection forms were reviewed and are on file.

DATE: December 28, 1999
SUBJECT: Fourth Quarter Visual Evaporation Pond Inspection

On December 23, 1999 the quarterly visual evaporation pond inspection was performed as required by License Condition No. 11.4 of SUA-1534. The R & D Evaporation Ponds and the Commercial Evaporation Ponds #1, #3, and #4 were all included in the inspection. All ponds are inspected on a daily basis.

1. No apparent settlement or erosion problems with dikes or slopes have occurred at the R & D Ponds. With the exception of one washout on the south slope of Pond #1 and very small erosional gullies on the slopes of all of the Commercial Ponds, generally the pond slopes are in good condition. There is increased gopher and mole activity evident on all of the slopes of Pond #1, on the west and north slopes of Pond #3, on the west slope of Pond #4, and on the east slope of the East R&D Pond. No apparent settlement of dikes or slopes was evident at the Commercial Ponds.

2. The game proof fences and entrance gates at both sets of Ponds appear to be in good condition. The Radioactive Materials signs posted on the fences are visible and readable.

3. No pond or feed line seepage has been noted.

4. The standpipe underdrains of the R & D ponds remain at less than six inches and no sampling has been required. As per License Condition No.11.4, on a weekly basis, CBR samples any underdrain of the Commercial Ponds that contains six inches or more of fluid. Appendix I

Monthly Restoration Reports

Third and Fourth Quarter, 1999

CROW BUTTE MINE

MONTHLY RESTORATION REPORT

JULY 1999

MINE UNIT 1

1. RESTORATION ACTIVITY DURING MONTH:

	YES	NO	
a. Groundwater Transfer		x	(if yes, complete part 2)
b. Groundwater Sweep		x	(if yes, complete part 3)
c. Groundwater Treatment		x	
d. Wellfield Recirculation		x	
e. Other (explain):	x		

2. LIST WELLS USED IN GROUNDWATER TRANSFER DURING THE MONTH:

3. LIST WELLS USED IN GROUNDWATER SWEEP DURING THE MONTH:

4. LIST WELLS SAMPLED DURING MONTH AND ASSAY RESULTS:

The Mine Unit 1 Baseline Restoration wells were sampled on July 15, 1999. The samples were sent to Energy Labs in Casper, Wyoming.

CROW BUTTE MINE

MONTHLY RESTORATION REPORT

AUGUST 1999

MINE UNIT 1

1. RESTORATION ACTIVITY DURING MONTH:

	YES	NO	
a. Groundwater Transfer		x	(if yes, complete part 2)
b. Groundwater Sweep		x	(if yes, complete part 3)
c. Groundwater Treatment		x	
d. Wellfield Recirculation		x	
e. Other (explain):	x		

2. LIST WELLS USED IN GROUNDWATER TRANSFER DURING THE MONTH:

3. LIST WELLS USED IN GROUNDWATER SWEEP DURING THE MONTH:

4. LIST WELLS SAMPLED DURING MONTH AND ASSAY RESULTS:

Mine Unit 1 restoration and stabilization complete. Results from final stabilization sample of baseline restoration wells sampled July 15, 1999 is attached. The reports are a summary of all six rounds of stabilization samples.

CROW BUTTE MINE

MONTHLY RESTORATION REPORT

SEPTEMBER 1999

MINE UNIT 1

1. RESTORATION ACTIVITY DURING MONTH:

	YES	NO	
a. Groundwater Transfer		x	(if yes, complete part 2)
b. Groundwater Sweep		x	(if yes, complete part 3)
c. Groundwater Treatment		x	
d. Wellfield Recirculation		x	
e. Other (explain):			

2. LIST WELLS USED IN GROUNDWATER TRANSFER DURING THE MONTH:

3. LIST WELLS USED IN GROUNDWATER SWEEP DURING THE MONTH:

4. LIST WELLS SAMPLED DURING MONTH AND ASSAY RESULTS:

CROW BUTTE MINE

MONTHLY RESTORATION REPORT

OCTOBER 1999

MINE UNIT 1

1. RESTORATION ACTIVITY DURING MONTH:

	YES	NO	
a. Groundwater Transfer		x	(if yes, complete part 2)
b. Groundwater Sweep		x	(if yes, complete part 3)
c. Groundwater Treatment		x	
d. Wellfield Recirculation		x	
e. Other (explain):			

2. LIST WELLS USED IN GROUNDWATER TRANSFER DURING THE MONTH:

3. LIST WELLS USED IN GROUNDWATER SWEEP DURING THE MONTH:

4. LIST WELLS SAMPLED DURING MONTH AND ASSAY RESULTS:

CROW BUTTE MINE

MONTHLY RESTORATION REPORT

NOVEMBER 1999

MINE UNIT I

1. RESTORATION ACTIVITY DURING MONTH:

	YES	NO	
a. Groundwater Transfer		x	(if yes, complete part 2)
b. Groundwater Sweep		x	(if yes, complete part 3)
c. Groundwater Treatment		x	
d. Wellfield Recirculation		x	
e. Other (explain):			

2. LIST WELLS USED IN GROUNDWATER TRANSFER DURING THE MONTH:

3. LIST WELLS USED IN GROUNDWATER SWEEP DURING THE MONTH:

4. LIST WELLS SAMPLED DURING MONTH AND ASSAY RESULTS:

CROW BUTTE MINE

MONTHLY RESTORATION REPORT

DECEMBER 1999

MINE UNIT 1

1. RESTORATION ACTIVITY DURING MONTH:

	YES	NO	
a. Groundwater Transfer		x	(if yes, complete part 2)
b. Groundwater Sweep		x	(if yes, complete part 3)
c. Groundwater Treatment		x	
d. Wellfield Recirculation		x	
e. Other (explain):	x		Restoration approved - FINAL REPORT

2. LIST WELLS USED IN GROUNDWATER TRANSFER DURING THE MONTH:

3. LIST WELLS USED IN GROUNDWATER SWEEP DURING THE MONTH:

4. LIST WELLS SAMPLED DURING MONTH AND ASSAY RESULTS:

CROW BUTTE MINE

MONTHLY RESTORATION REPORT

JULY 1999

MINE UNIT 2

1. RESTORATION ACTIVITY DURING MONTH:

	YES	NO	
a. Groundwater Transfer		x	(if yes, complete part 2)
b. Groundwater Sweep		x	(if yes, complete part 3)
c. Groundwater Treatment	x		
d. Wellfield Recirculation		x	
e. Other (explain):		x	

2. LIST WELLS USED IN GROUNDWATER TRANSFER DURING THE MONTH:

3. LIST WELLS USED IN GROUNDWATER SWEEP DURING THE MONTH:

4. LIST WELLS SAMPLED DURING MONTH AND ASSAY RESULTS:

I147P, P119, P125, P127, P210, P81, P83, P88, P89. Analytical results are listed in Table 1.

CROW BUTTE MINE

MONTHLY RESTORATION REPORT

NOVEMBER 1999

MINE UNIT 3

1. RESTORATION ACTIVITY DURING MONTH:

	YES	NO	
a. Groundwater Transfer		x	(if yes, complete part 2)
b. Groundwater Sweep	x		(if yes, complete part 3)
c. Groundwater Treatment		x	
d. Wellfield Recirculation	x		
e. Other (explain):		x	

2. LIST WELLS USED IN GROUNDWATER TRANSFER DURING THE MONTH:

3. LIST WELLS USED IN GROUNDWATER SWEEP DURING THE MONTH:

P213, P219, P228, P232, P233, P241, P244, P246, P248, P250

4. LIST WELLS SAMPLED DURING MONTH AND ASSAY RESULTS:

P213, P219, P223, P226, P228, P232, P233, P241, P244, P246, P248, P250
