

DS10

P10

The DOE already has released at least 1,300 tons of gold -
related radioactive steel + copper from Oak Ridge to various
facilities despite opposition from the metals industry.

It is virtually impossible to clean even the
surface contaminated metals, some residual contamination
entering the consumer marketplace.
DOE should totally oppose to the recycling of radio-
active contaminated metals and I demand that you
act to prevent any contaminated materials from
entering the consumer marketplace.

(64FR35090)

As a taxpayer, a U.S. citizen and a
U.S. consumer I do not want to pay for
this recycling and I do not want to be
exposed inadvertently and unknowingly to any
radiation.

Sincerely
Demi Stout
