Dear Mr Parrott,

The reprocessing facility outside West Valley N.Y. needs to be closed up completely. No amount of radiation, High level, low level - dirt, water, clothes, building material buried waste, experimental, new technology contain ment or barrier trenches, any thing, should remain. It should all be removed and it should continue to be carried out using the safest and most advanced scientific methods - the expert know. No cost cutting or less expensive ideas should be used here.

West Valley is centered in prime, growing, agricultural land & the right amount of rain, sun - the right temperatures - needed to sustain life. The area is also our worlds largest, natural fresh water system, and a very densely populated area including large cities - Pittsburg, Buffalo, Cleveland - Rochester

Any radiation exposure left behind

NIMSSOIPubli

is unacceptable over 25 milirems.  
The Federal Government needs to  
complete this clean up - and monitor  
this area forever - - - - -

We know radiation exposure is fatal  
to our human tissue. We're told its no  
more exposure than normal occurring  
radiation. Well we cannot do much  
about our normal occurring radiation  
can we. Its like the air we breathe -  
But this exposure is man made !!  
Clean it up completely!

Sincerely

Elizabeth Lipper  
116 N 5<sup>th</sup> St.  
Allegany N.Y. 14706

an added remark -

Congress should authorize an act to  
immediately fund and facilitate and fund  
a "dump" (for that's what it will be - for stone  
anyone has to love it) for all the terrible material
