Anonymous comment on a detail in Draft NUREG-1717

2

On page 3-249 of Draft NUREG-1717 it is stated that "Rather than refurbishing the DU (during maintenance operations), tungsten counterweights are used as a replacement." This is not always true, as can be verified by inquiries to Starmet Corporation, which currently refurbishes weights for reinstallation. Starmet should be able to give the NRC an accurate accounting of the number of weights being reentered into service, should such a number be required to revise the public dose calculation.
