Subject: Recycling radioactive waste

'00 MAR 15 P1:09

Please, I urge you strongly, reconsider your decision to set standards for radiation levels to be allowed in recycled waste! It is totally against the public welfare to expose the public to further radiation. Further, who can possibly measure the cumulative effects of exposure to many such products and/or repeated use of same? If we are told by our medical advisors to have no more x-rays than we absolutely must because of such cumulative effects, how in the world can anyone possibly think he can judge what another person will be exposed to with recycled waste abounding? It is the height of arrogance and folly as well as being an index of how much a pawn you are of the nuclear industry instead of serving the good of the public. You have a problem with the accumulation of all the waste that is being amassed, I know, but that is the result of the bad decision to approve nuclear energy in the first place before waste disposal was fully resolved! Don't add to the damage done. Two wrongs don't make a right.

James S. Mays
