10:51 AM

SIRS:

I am deeply disturbed and truly frightened by the DOE subsidizing the recycling of thousands of tons of radioactively contaminated scrap metal from a former nuclear weapons plant in Oak Ridge, Tenn.

This is recycling nuclear waste for which there can not possibly be any acceptable level/standards for use by consumers in no matter what product: i.e. car parts, cook ware, medical devices and even children's toys - children are especially susceptible!

The nuclear industry is pushing for a most irresponsible way to get rid of its contaminated waste!

Please consider the implications and consequences on the American people.

Thank you
Shirley Sabbeth
