NRC TO MEET WITH OMAHA PUBLIC POWER DISTRICT TO DISCUSS PERFORMANCE OF FORT CALHOUN NUCLEAR POWER PLANT

Nuclear Regulatory Commission staff will meet with representatives of the Omaha Public Power District on Thursday, March 27, to discuss the results of the agency's annual assessment of safety performance at the Fort Calhoun Nuclear Plant. The facility is located north of Omaha, Nebraska.

The meeting, which will be open to the public for observation, is scheduled to begin at 7:00 p.m. at the Holiday Inn Express, 10729 J Street (just north of 108th Street), Omaha.

Before the session is adjourned, NRC staff will be available to answer questions from the public on the safety performance of the plant, as well as the role of the NRC in ensuring safe plant operation.

The performance period to be discussed is January 1 to December 31, 2002. In addition, NRC staff will provide an overview of how the agency's Reactor Oversight Process works.

A letter sent from the NRC Region IV Office to the Omaha Public Power District addresses the performance of the plant during the period and will serve as the basis for the meeting discussion. It is available on the NRC web site at:

http://www.nrc.gov/NRR/OVERSIGHT/ASSESS/LETTERS/fcs_2002q4.pdf

“Overall, Fort Calhoun Station operated in a manner that preserved public health and safety and fully met all cornerstone objectives,” the letter says. During the most recent quarter, plant staff detected radiation that exceeded required levels on the external surface of a shipment package, but took “immediate corrective actions” in response. “Your staff determined that no members of the public came in close proximity to the package during shipment; therefore the shipment did not present an immediate safety concern to members of the public,” the letter says. The company appropriately performed investigations, reviews and self-assessments in response, the letter says. NRC also conducted a supplemental inspection last August to assess the adequacy of the licensee's actions, and found the licensee's response to the incident satisfactory.

In addition, the letter notes: “As you are aware, since the terrorist attacks of September 11, 2001, the NRC has issued several Orders and threat advisories to enhance security capabilities and improve guard force readiness. We have conducted inspections to review your implementation of these requirements and have monitored your actions in response to changing threat advisories. For calendar Year 2003, we plan

to continue these inspections and conduct portions of the security baseline inspection program, as well as perform additional inspections to evaluate your compliance with new requirements that may be ordered.”

Current performance information for Fort Calhoun is available on the NRC web site at:
