Office of Nuclear Reactor Regulation (NRR)  
Items of Interest  
Week Ending April 15, 2005

Issuance of Draft Generic Letter on Grid Reliability

On April 12, 2005, NRR issued a draft generic letter entitled, "Grid Reliability and the Impact on Plant Risk and the Operability of Offsite Power," for public comment in the Federal Register (70 FR 19125). The public comment period ends June 13, 2005. The proposed generic letter requests information from addressees in four areas: (1) use of transmission system operator protocols to monitor grid conditions to determine operability of offsite power systems; (2) use of transmission system operator protocols to monitor grid conditions for consideration in maintenance risk assessments; (3) offsite power restoration procedures; and (4) losses of offsite power caused by grid failures at a frequency of 20 years. The purpose of the proposed generic letter is to determine continued compliance with NRC regulations pertaining to availability/operability of offsite power for nuclear power plants.

Oconee - Meeting to Discuss Instrumentation & Control System Replacement

On April 6, 2005, NRR staff met with representatives from Duke Energy to discuss the licensee's February 14, 2005, license amendment request to replace the existing analog reactor protection system (RPS) and engineered safety feature (ESF) instrumentation and control (I&C) systems to digital systems at Oconee, Units 1, 2 and 3. This is the first full replacement of RPS and ESF I&C systems that requires a major application specific software and hardware review by the staff. The digital platform being used for the replacement is the Framatome's Teleperm XS (TXS), which has previously been reviewed and approved by the staff. However, this is the first time this platform is being used in a safety-related digital upgrade. While Duke Energy has requested completion of staff review by March 2006, the staff has proposed a completion date of December 2006 due to staffing constraints.

NRC Information Notice (IN) 2005-08, "Monitoring Vibration to Detect Circumferential Cracking of Reactor Coolant Pump and Reactor Recirculation Pump Shafts"

On April 5, 2005, NRC issued the subject IN to alert addressees to the importance of timely detection of circumferential cracking of reactor coolant pump and reactor recirculation pump shafts to minimize the likelihood of consequential shaft failures. No specific action or written response is required for INs, however, it is expected that recipients will review the information for applicability to their facility and consider actions, as appropriate.

Information Notice (IN) 2005-09: "Indications in Thermally Treated Alloy 600 Steam Generator Tubes and Tube-to-Tubesheet Welds"

On April 7, 2005, NRC issued the subject IN to inform addressees about recent operating experience with degradation in steam generator tubes and tube-to-tubesheet welds. No specific action or written response is required for INs, however, it is expected that recipients will review the information for applicability to their facility and consider actions, as appropriate.

Nuclear Procurement Issues Committee (NUPIC) Audit at Enertech, a Division of Curtiss-Wright Flow Control Corporation

On April 3-8, 2005, the Division of Inspection Program Management staff observed the performance of a NUPIC joint utility audit conducted at Enertech in Brea, California. Enertech is a supplier of numerous mechanical and electrical assemblies and replacement parts. The purpose of the observation was to assess the NUPIC audit process used for approving suppliers of safety-related and commercial grade components to the nuclear industry.

Grand Gulf Early Site Permit Application - Issuance of Draft Safety Evaluation Report

On April 7, 2005, NRR staff issued a draft safety evaluation report (SER) for the Grand Gulf (System Energy Resources, Inc) early site permit application. The report documents the staff's safety review and describes approximately 23 open items for which additional information is needed prior to the staff finalizing the SER. The document will be withheld from public release for 14 days to provide the applicant an opportunity to review it for proprietary information. The staff issued a press release concurrent with transmittal of the document to the applicant.

Public Meeting Regarding Generic Safety Issue (GSI) 191, Pressurized-Water Reactor (PWR) Sump Performance

On April 13-14, 2005, staff members from NRR and the Office of Nuclear Regulatory Research held a public meeting with Nuclear Energy Institute and other industry representatives at the NRC headquarters, to discuss resolution activities associated with GSI-191, "Assessment of Debris Accumulation on PWR Sump Performance." Discussions included: (1) recent results of research on chemical and downstream effects; (2) the status of 90-day responses to Generic Letter 2004-02, "Potential Impact Of Debris Blockage On Emergency Recirculation During Design Basis Accidents At Pressurized-Water Reactors;" (3) the status of the review of Bulletin 2003-01, "Potential Impact Of Debris Blockage On Emergency Sump Recirculation At Pressurized-Water Reactors;" (4) observations made during the Crystal River 3 pilot audit; (5) preliminary observations from the Electric Power Research Institute's original equipment manufacturer coating testing program to test on qualified coatings; and (6) a Westinghouse Owners Group program to evaluate downstream effects. Following the public meeting, the staff held closed meetings (due to the proprietary nature of the information discussed) with five vendors supplying engineering services to licensees and discussed technical details of proposed solutions.

Office of Nuclear Material Safety and Safeguards (NMSS)  
Items of Interest  
Week Ending April 15, 2005

Staff Meeting with Armenian Nuclear Regulatory Authority

On April 13, 2005, at the request of the Office of International Programs, staff from the Division of Waste Management and Environmental Protection met with staff from Advanced Systems Technology and Management, Inc. (ADSTM). ADSTM is an American company contracted by the Armenian Nuclear Regulatory Authority (ANRA) to develop a regulatory licensing plan for the decommissioning of the Armenian Nuclear Power Plant. To implement this plan, ANRA staff must: (1) become knowledgeable about the regulatory and technical issues associated with a typical pressurized-water-reactor decommissioning; (2) develop new regulations specifically addressing decommissioning; and (3) define a licensing process to regulate the various phases of a decommissioning project. These phases include pre-shutdown planning activities, actual decontamination and dismantlement activities, and final site remediation and license termination. The purpose of the meeting was to discuss practical licensing issues and lessons-learned from the decommissioning of the Maine Yankee and Trojan facilities.

NRC High-Level Waste Staff Attends International Atomic Energy Agency Meeting

On April 4-8, 2005, a staff member from the Division of High-Level Waste Repository Safety attended the International Atomic Energy Agency (IAEA) Consultants' Meeting on the Design and Operation of Geological Waste Disposal Facilities in Vienna, Austria. The Consultants' Meeting was held to provide assistance to the IAEA in drafting a Safety Guide for geological disposal of radioactive waste (entitled: "Design and Operation of Facilities for Geological Disposal of Radioactive Waste" - DS-334). The Safety Guide is intended to support the corresponding Safety Requirements document for geological disposal (DS-154), by providing guidance to policy makers, regulators, and operators concerned with the development and regulatory control of geological disposal facilities.

Office of Nuclear Regulatory Research (RES)  
Items of Interest  
Week Ending April 15, 2005

Probabilistic Risk Assessment (PRA) Steering Committee Public Meeting

On April 7, 2005, the PRA Steering Committee met with the representatives from the Nuclear Energy Institute (NEI), licensees, and members of the public to discuss issues related to current risk-informed initiatives. Topics discussed at the meeting included the proposed 10 CFR 50.46 rulemaking, long-term direction of risk-informed applications, configuration risk management, review of topical reports involving generic changes, and Mitigating System Performance Index (MSPI) implementation. The meeting was well attended by external stakeholders and participants provided useful insights on the discussion topics. The PRA Steering Committee consists of the office directors from the Offices of Nuclear Regulatory Research, Nuclear Reactor Regulation, Nuclear Material Safety and Safeguards, Nuclear Security and Incident Response, and Enforcement; one Regional Administrator; and a representative from the Office of the General Counsel.

International Workshop on "International Standard Problem 48 - Analysis of 1:4 Scale Prestressed Concrete Containment Vessel Model Under Severe Accident Conditions"

From April 4-8, 2005, a RES senior technical advisor participated in the 3<sup>rd</sup> meeting of the International Standard Problem 48 (ISP-48) and an international workshop sponsored by the Committee on the Safety of Nuclear Installations (CSNI) on "International Standard Problem 48 - Analysis of 1:4 Scale Prestressed Concrete Containment Vessel Model Under Severe Accident Conditions" in Lyon, France. The objective of the meeting and the workshop was to present results obtained by the participants in the ISP-48 and to assess the current practices and the state of the art for determining the containment structural response under severe accident conditions. Eleven teams from ten OECD member countries participated in the workshop.

Office of Administration (ADM)  
Items of Interest  
Week Ending April 15, 2005

Contract Award

On April 12, 2005, a competitive Delivery Order No. DR-02-05-003 was awarded to Computer Sciences Corporation under the General Service Administration's Federal Supply Schedule. The contractor is to provide the Office of Nuclear Material Safety and Safeguards support services for the Regulatory Product Development Center, including technical editing, meeting facility setup, and limited meeting facilitation. The total estimated cost is \$695,209.60, inclusive of an optional task for additional support in the amount of \$121,438.00. The period of performance, including the optional task, is one-year.

April 15, 2005

ENCLOSURE O

Region I (RI)  
Items of Interest  
Week Ending April 15, 2005

Whittaker Decommissioning Site Inspection

On April 12, 2005, Region I staff conducted an inspection of decommissioning activities at the Whittaker Decommissioning Project Site in Transfer, PA. The Region I staff met with the representatives of the site decommissioning contractor, toured the site, observed on-going work activities, reviewed records and assessed the security and control of material on site. A representative from the Commonwealth of Pennsylvania, Department of Environmental Protection was also present at the site. The tour covered the active work area and also included the entire perimeter of the site. At the conclusion of the inspection, the NRC met with the representatives of the site decommissioning contractor to discuss the results of the inspection.

Periodic Management Meetings with New York State Agreement Programs

On April 12-13, 2005, the Regional State Agreements Officer (RSAO) and the Agreement State Project Officer (ASPO) from the Office of State and Tribal Programs met with each of the State of New York's three State Radiation Program Directors and their management to discuss the status of their Agreement State programs. The three State-level Agreement State programs are part of the Departments of Health, Labor and Environmental Conservation. Important topics of discussion during the meeting were status of each program's progress in adopting overdue NRC amendments required for compatibility and timely reporting of Agreement State events to the NRC Operations Center. The RSAO and the ASPO will be meeting the fourth New York Agreement State program (New York City Bureau of Radiological Health) on April 19, 2005.

Region II (RII)  
Items of Interest  
Week Ending April 15, 2005

Nuclear Fuel Services, Inc. - Licensee Performance Review

On April 14, 2005, the Regional Administrator and the Director, Division of Fuel Facility Inspection held the Licensee Performance Review meeting at the Nuclear Fuel Services, Inc., in Tennessee.

Westinghouse Electric Company, LLC. -Licensee Performance Review

On April 11-12, the Deputy Regional Administrator and the Acting Deputy Director, Division of Fuel Facility Inspection held the License Performance Review meeting at the Westinghouse Electric Company's Columbia facility in South Carolina. The NRC's Deputy Executive Director for Materials, Research and State Programs also attended.

Commissioner Jaczko Visits Fuel Facilities

On April 13, 2005, Commissioner Jaczko, accompanied by the Director, Office of Nuclear Material Safety and Safeguards, and the Director, Division of Fuel Facility Inspection of Region II, visited the Paducah Gaseous Diffusion Facility in Kentucky and the Honeywell International facility in Illinois for a site tour and meeting with licensee management.

Region IV (RIV)  
Items of Interest  
Week Ending April 15, 2005

Palo Verde Nuclear Power Station

On April 8, 2005, the NRC issued a "Yellow " inspection finding to Arizona Public Service Company (APSC) for the failure to ensure that design requirements associated with maintaining the containment sump suction piping filled with water at the Palo Verde nuclear power plant. In addition, a Severity Level III violation with a proposed \$50,000 civil penalty was issued for the failure to perform a written safety evaluation and receive prior NRC approval before making a change to the facility, which resulted in the containment sump suction piping being drained following local leak rate testing.

River Bend Nuclear Power Station

On April 12, 2005, a public meeting was conducted at the Region IV offices with management representatives from River Bend Station to discuss equipment reliability, refueling outage performance, human performance, and performance improvement initiatives.
