Subject: Amendment Request to Add an Additional Area of Use to Yale-New Haven  
Hospital's Human Use Broad Scope License No.: ~~06-30819-03~~ RLJ

06-00819-03

Dear Ladies and Gentlemen:

Yale-New Haven Hospital (YNHH), as part of our recent license renewal process, dropped 40 Temple Street as an authorized area of byproduct materials use. However, in answer to a request to offer sentinel node labeling services for our patients there, we would like to reincorporate this area into our license. This will allow the Hospital to perform these procedures in the Ambulatory Surgery Center, located on the premises of the Temple Medical Center (TMC). This area would be limited to the use of unit doses of a few millicuries of Technetium-99m. Therefore, we request that the Temple Medical Center, 40 Temple Street, New Haven, CT 06510, be added as an additional area of use, in Condition 10 of our license.

All unit doses will be received pre-calibrated from either a licensed radiopharmacy or prepared by and transferred from the YNHH Nuclear Medicine Hot Lab. All administrations will be performed under the supervision of an YNHH Authorized User who is authorized to perform imaging and localization studies in 10 CFR 35.200.

The byproduct materials operations in the surgical center will be conducted under the supervision of the YNHH Radiation Safety Committee and the Radiation Safety Office. All operations at the Temple Medical Center will comply with Nuclear Regulatory Commission and State regulations, licenses, registrations and license commitments.

The Temple Medical Center is located a few blocks away from the main campus of Yale-New Haven Hospital. In addition, our GammaKnife Radiosurgery Center, which is operated under our NRC teletherapy license No. 06-30445-01, it is also located at this site. A map showing the relative locations of Yale-New Haven Hospital and the Temple Medical Center, is attached for your reference.
