Steve,

Our Plant/Satellite Operators discovered a reportable release originating from a buried pipeline supplying disposal solutions to our Deep Disposal Well. The spill is located in the NWNWNW of Section 36, T36N, R74W directly adjacent to our Wellfield 2 and within our Permit to Mine. The spill originated sub-surface and approximately 11,600 gallons were release with 7,500 gallons coming to surface. The line was shut off upon discovery and uncovered to determine and fix the cause. A water sample was collected from the pooled solutions and sent to Energy Lab for analysis. Soil samples will be collected when the surface is dryer and more compact. This release did not enter nor threaten the Waters of the State. A full report will follow.

Regards,

John McCarthy
