Subject: 19th and 20th century energy policies

Sir: The nuclear parasites won't give up. While every informed physicist not on a nuclear company's payroll has concluded that splitting the atom is the worst thing that ever happened to the human race, the industry insists on being socialized and pursuing an energy source which in fact may produce little or no net energy. They fail to do a complete energy audit, for the obvious reason that all the plants would then be shut down very quickly and better sources would become rapidly dominant. Some are fooled by the industry's self-promotion, but informed citizens are not. Shut 'em all down tomorrow morning before breakfast. Convert your intelligent work force to real solutions.
