material at the Grand Rapids and Marquette, Michigan field stations. The licensee had 15 gauges out of the Grand Rapids site and eight gauges out of the Marquette site. The licensee employs approximately 25 individuals throughout the company. Performance Observations The inspector interviewed the RSO and several gauge operators and found that the licensee staff had adequate knowledge to ensure safe use of the gauge. The inspector reviewed the licensee's leak test records, inventory, transportation documentation and dosimetry records; no abnormal issues were identified. No licensed operations were on-going within NRC jurisdiction at the time of the inspection. The licensee demonstrated the proper methods to transport and store the gauge when not in use.
