Ted,

Please scroll through the emails. There is a request for the raw data by the ecologists. Thank you.

Linda

Linda,

We would like the histograms and the data.

Hi Jay,

It would be fine for the Duke staff to use histograms for the purpose of comparing their sampling in the vicinity of the site to other Piedmont streams, but I would still prefer to see the raw data from their own sampling so that I can pick out other details (e.g., different size classes may be preferentially captured by different sampling gear types, I wouldn't be limited by the interval width chosen by Duke for their histograms if I wanted to perform my own analysis, etc...).

Thank you,
- Sue

Sue,

Is Ted's response adequate for your needs?

Subject: Lee Audit - NRC Information Need

At the ER audit, NRC requested the following:

We would like information that specifically outlines the size-class distribution of fish encountered during the 2006 Duke fish study. This information should also include a comparison of how the size-class data compares with that of other rivers in the Piedmont region.

Our ecology staff contacted me and asked if histograms of the size-class data would be acceptable. This would facilitate comparison to other Piedmont streams. We do have the raw sample data of size for each individual fish collected but comparison to other Piedmont streams would not be easy using the raw data.
