Doug:

I believe that what you are recalling is in SCA Vol 1 of 9 Section 4.10.1.3, page 4-12. (see below)

4.10.1.3 Effects of ROW Preparation and Construction

The heavy haul road will be constructed by excavating existing soils to a depth of up to 2 ft. to remove organic matter. The roadway will then be backfilled with engineered soil and capped with a geotextile mat. Approximately 3 ft. of compacted gravel aggregate will cover the mat and form the road surface. The clearing and grubbed vegetation will be burned. Anything that cannot be burned will be hauled off-site to an approved upland disposal area. A joint application for an ERP for the LNP project is included in SCA Appendix 10.4

Hope this helps,

Paul,

If memory serves me there is reference to a source that discusses whether or not the heavy haul road will be asphalt or remain dirt. Can you please provide that reference?

Thanks,

Doug Bruner
