Hi Steve,

The NRC region is preparing to ship a new Dell computer (and 42" Panasonic TV) to be installed in our conference room for Go-To-Meeting sessions soon.

What we need your help with (are you the right person to help us again?) is to activate "yellow" DATA 13A spare LAN jack to our NRC network for the DELL computer. The jack is located on the back wall of the

1

conference room. We plan to install the TV & computer on the wall that joins the printer/copier room. We would also like to ensure the 2 electrical outlets next to this port are active.

Please let me know when you can check this for us or who I would contact.

Thanks so much!...........Diane
