Subject: RE: Ground Water Model

Katrina,

We are trying to finish the modeling late this year. Progress has been somewhat slowed by the unrelated need for our principal modeler to develop new background threshold values for NRC, pursuant to a pending license amendment request to change some of the groundwater protection standards. We are reviewing modeling progress with NRC at appropriate milestones, and eventually the results will be contained within a report. It's current, main purpose is to support POC-POE determinations and to support a NRC risk assessment for potential Zone 3 ACLs; however, the final report will be distributed to all of the stakeholders.

The next deliverable coming to EPA will be our responses to comments on the human health risk assessment – I am the hold-up here as I have been battling a bout of Lyme disease for the past couple of weeks. We expect to discuss the responses with EPA on a future conference call, where we hope to settle any remaining issues or further revisions. We will then be ready to submit a final and revised HHRA to EPA.

Subject: Ground Water Model

Roy, I am inquiring about progress made on the ground water modeling. Do you have a time frame for the submittal?
