Subject: Environmental Impact Statement for Combined License (COL) for Enrico Fermi Unit 3

RE: Report Number: NUREG-2105

I am hereby recommending that the proposed Enrico Fermi Unit 3 not be completed and that the operating permit to DTE Energy Utility Company be denied for the following reasons:

- The Business case for Electric Power demands on the Grid for Metro Detroit, and surrounding areas does not warrant the excessive cost expenditures to build Fermi 3 at the request of DTE Energy. The City of Detroit has lost its population base (now down to slightly over 700,000 based upon the last Census. DTE Energy would not try to build Fermi 3 without the Federal Govt funding support. This is a waste of Tax Payer \$Dollars and contributes to the Federal Budget deficit, now already out of control!
- The environmental impact on the immediate Monroe area and on Lake Erie for wildlife; water quality thermal and radioactive pollution; cancer threats to the area citizens propose unacceptable risks.
- The NRC has no permanent solution for the storage and disposition of nuclear waste rods. Yacca Mt is now longer viable because it is on an earthquake fault zone. These toxic waste rods continue to build up in all the States with Nuclear Reactors (105 and counting). There are no dedicated storage facilities in the US and none of the states want Nuclear Waste rods moved across their state to any designated storage facility. I have not seen any viable storage options from the Dept of Energy either.
- Any jobs creation arguments for the area to justify FERMI 3 is a weak one because all such new reactor based are only temporary and will come from other outstate locations.
- High risk of future reactor based meltdown and corresponding contamination for the whole region. Unlikely, but possible!
