Subject: Draft RAI 6225 related to SRP Section 02.04.06 -Probable Maximum Tsunami Flooding for the Turkey Point Units 6 and 7 combined license application.

To All,

Attached is the draft of RAI No:6226, regarding section 02. 04.06 Probable Maximum Tsunami Flooding for the Turkey Point Units 6 and 7 combined license application.

If you need a conference call to discuss the question(s) of the draft RAIs please contact me at 301-415-3863. Unless you request additional clarification we will normally issue the RAI as final within 3 to 5 days, from today.

Thanks

Docket No. 52-040 and 52-041
SRP Section: 02.04.06 - Probable Maximum Tsunami Flooding
Application Section: Section 02.04.06

QUESTIONS from Hydrologic Engineering Branch (RHEB)

02.04.06-***

To meet the requirements of GDC 2, 10 CFR 52.17, and 10 CFR Part 100, FPL should provide an assessment of the Probable Maximum Tsunami (PMT) for the proposed site. Section C.I.2.4.6.3 of Regulatory Guide 1.206 (RG 1.206) provides specific guidance with respect to the source characteristics needed to determine the PMT. Provide justification that triggering conditions for submarine mass failures in the Florida Straits are not currently present. If triggering and pre-conditioning factors/loading conditions such as those that caused the Miocene debris flows and likely Pleistocene-age failures at the western end of the Florida Straits (Holmes, 1985; Twichell and others, 1993) cannot be determined, explain whether potential submarine mass failures can be conservatively excluded. If such failures are considered, discuss how inclusion of this source affects PMT water levels at the site.

02.04.06-***

To meet the requirements of GDC 2, 10 CFR 52.17, and 10 CFR Part 100, FPL should provide an assessment of the Probable Maximum Tsunami (PMT) for the proposed site. Section C.I.2.4.6.3 of Regulatory Guide 1.206 (RG 1.206) provides specific guidance with respect to the source characteristics needed to determine the PMT. Provide justification that source parameters for the Cape Fear landslide from Hornbach et al. (2007) are conservative, with regard to not only the upper part of the landslide, but also the downslope region of failure. If the source parameters for this potential PMT source are revised, discuss how the revised source affects PMT water levels at the site.
