I am opposed to another nuclear reactor being built at the Fermi site! According to your own report, the estimated number of fish eggs and larvae entrained by the Fermi 2 cooling water intake from July 2008 thru July 2009 totals 62,566.649. (See Draft NUREG-2105 page 2-78). This does not include eggs and larvae from December thru February.

How can you ignore those kinds of numbers?

I am not a scientist but I know when something is wrong!
