The inspection was an examination of the activities conducted under your license as they relate to radiation safety and to compliance with the Nuclear Regulatory Commission (NRC) rules and regulations and the conditions of your license. The inspection consisted of selective examinations of procedures and								
representative records, i	nterviews with personnel,	and observations by the ir	spector. The inspec	tion findings are as follows:	•			
1. Based on the inspection findings, no violations were identified.								
2. Previous violation(s) closed.								
2 The violetic		d to care his the incorporar	a ann aiteal rialatice	en are not bains aited boss.	ing they were			
self-identifi	in(s), specifically describe ied, non-repetitive, and co	orrective action was or is be	eing taken, and the	is, are not being cited becau remaining criteria in the NR0	C Enforcement			
Policy, NU	REG-1600, to exercise di	scretion, were satisfied						
Non-cited violation(s) were discussed involving the following requirement(s):								
4 During this	inspection certain of your	activities as described be	low and/or attached	were in violation of NRC				
 During this inspection certain of your activities, as described below and/or attached, were in violation of NRC requirements and are being cited. This form is a NOTICE OF VIOLATION, which may be subject to posting in accordance 								
with 10 CFR 19.11								
Statement of Corrective Actions								
I hereby state that, within 30 days, the actions described by me to the inspector will be taken to correct the violations identified. This statement of								
corrective actions is made in accordance with the requirements of 10 CFR 2.201 (corrective steps already taken, corrective steps which will be taken,								
date when full compliance will be achieved). I understand that no further written response to NRC will be required, unless specifically requested.

PROGRAM SCOPE								
The licensee is a small engineering firm that employs 13 individuals. The licensee possesses three Troxler Model 3440 moisture density gauges, for use daily/weekly during the construction season (May-November) for soils engineering projects. The licensee does not perform any service or maintenance activities on its gauges; these services are performed by the manufacturer. Currently, the licensee employs three authorized gauge users who have completed manufacturers training. Device is locked in a metal storage cabinet in a garage area in the licensee's offices in Marquette, Michigan using three locks. The licensee locked the gauges inside of the cabinet, the cabinet itself had a lock in the handle, and the door to open the cabinet had a hasp with a third lock.								
Performance Observations								
At the time of this inspection, the gauges were not in use. The operator possessed required shipping papers which contained all appropriate information and were accessible in the transport vehicle. The licensee locked the gauge/case were locked and chained to the rear of the pick-up truck during transport using two locks and two chains. The operator demonstrated an adequate level of understanding of emergency and handling procedures during job-site interviews. Security during transport was described with no problems noted. The inspector performed independent and confirmatory radiation measurements which indicated similar results as noted in the licensee's survey records.
