HYDROGEOLOGIST/HYDROLOGIST TO SUPPORT DECOMMISSIONING AND URANIUM RECOVERY ACTIVITIES F1115 22 2012-55-35-4-196 FSM Edna Knox-Davin Tanya Oxenberg Thomas MicLaughlin Dominick Orlando YES TBD TBD

040-08102 TBD

1 Background

Congress enacted the Uranium Mill Tailings Radiation Control Act of 1978 (UMTRCA) to provide for the disposal, long-term stabilization and control of uranium mill tailings in a safe and environmentally sound manner, and to minimize or eliminate radiation health hazards to the public.

Under the provisions of Title I of UMITRCA, Congress addressed the problem of inactive, unregulated tailing piles. Title I of UMTRA specifies the inactive processing sites for remediation. Except at the Atlas Moab site, surface reclamation activities have been completed and approved by the U.S. Nuclear Regulatory Commission (NRC) at all Title I sites. However, groundwater ground water cleanup is still ongoing at many of these Title I sites. When ground water cleanup is completed, DOE will submit a revised long-term surveillance plant (LTSP) for NRC concurrence. Title 10 of the Code of Federal Regulations, Section 40. 27, "General License for Custody and Long-Term Care of Residual Radioactive Material Disposal Sites," governs the long-term care of Title I sites under a general license held by either DOE or the State in which the site is located.

Title II amended the definition of byproduct material to include mill tailings and added specific authorities for the NRC to regulate this new category of byproduct material at licensed sites. Title II of the UMTRCA addresses uranium recovery operations and decommissioning of sites, which have substantial quantities of mill tailings, are licensed by the NRC or its Agreement States.

A Hydrogeologist/Hydrologist will provide technical support to the disposal, long-term stabilization, and control of uranium mill tailings in a safe and environmentally sound manner, and to minimize or eliminate environmental and radiation health hazards to the public.

2 Objective

The objective of this task is to seek assistance from the Center for Nuclear Waste Regulatory Analyses (CNWRA) to provide support for a Hydrogeologist to support decommissioning and uranium recovery activities for the following subtasks.

3 Work Requirements/Scope of Work

Subtask 1 ExxonMobil Environmental Services

ExxonMobil submitted a Notice of Intent (ML092720150) to prepare and submit a license amendment application to re-define the proposed long-term surveillance and monitoring (LTSM) boundary, including the establishment of new and revised alternate concentrations limits (ACL) with associated points of compliance (POC) and points of Exposure (POE) for the Highland Reclamation Project located in the State of Wyoming. CNWRA staff will review the application and other pertinent documents to determine the acceptability of the re-define proposed long-term surveiliance and monitoring (LTSM) boundary, as well as, the appropriateness of the revised alternate concentration limits (ACL) on the associated points of compliance (POC) and points of exposure (POE). More specifically, to determine the acceptability, CNWRA staff will examine and evaluate the following: a) the geology and stratigraphy of the affected area and the re-defined area, b) the appropriateness of the groundwater and hydrological models used by ExxonMobil; c) appropriateness of the input parameters associated with the models; d) assumptions used to operate and validate the model; e) adjacent land and water uses; and f) the development and justification of the point of compliance (POC) and point of exposure (POE). Based on the above information, including the submitted license amendment, CNWRA shall develop a Safety Evaluation Report (SER) and an Environmental Report (ER). The contents of the SER/ER will be determined by consultation with NRC.

OPTIONAL WORK: Subtask 5 Monument Valley Arizona Title i site (9/29/2012 – 9/28-2013)

At the Monument Valley, Arizona Title I site, NRC is expecting the U.S. Department of Energy (DOE) to submit a Final Phytoremediation Study Report and Groundwater Compliance Action Plan (GCAP) in fiscal year 2011, for review and NRC concurrence.

For the Final Phytoremediation Study Report, CNWRA staff will examine and evaluate the applicability of the option selected and its impact on NRC/EPA regulations and guidance for NRC acceptance.

For the Groundwater Compliance Action Plan (GCAP), CNWRA staff will examine and evaluate the methodology, the development and the impact of the Point of Exposure (POE), as well as, the impact on NRC regulations and guidance for NRC acceptance.

4 Technical Qualifications Required

Subtask 1 and Optional Subtask 5

A minimum of a bachelor of science, (preferably a graduate level degree) in a science and/or engineering discipline with a minimum of 5 years of experience in hydrology, hydrogeology, geology, geochemistry, and/or groundwater assessment, or some combination thereof.

6 Meetings and Travel

Subtask 1

Two trips are identified for one person. One trip will be to NRC Headquarters for a kickoff meeting and the second trip to the applicant's site. During the trip to the applicant's site, CNWRA staff will participate in the collection of split samples of approximately 25 wells and the Highland reservoir.

Optional Subtask 5

Two trips are identified for one person. One trip will be to the site and the second trip will be to a public meeting.

7 NRC Furnished Material

Subtask 1

The NRC Project Manager for the site will supply one copy of the license amendment application and the relevant information listed below:

- 1973 Environmental Statement prepared by the AEC
- 1982 Exxon Seepage Study
- 1982 Review of the Seepage Study by Roy Williams
- 1984 Final Reclamation Plan submitted to the NRC by Exxon
- 1984 Reclamation Lake Water Quality by Charles Down
- 1985 Reclamation Plan submitted to WDEQ by Exxon
- Annual Reports of Seepage Migration from 1990 to 1999
- 1998 Supporting Information for ACL Application from Exxon
- 1999 EA and TER for ACL approval by NRC
- 2000 Highland Reservoir Reclamation by WDEQ
- 2007 Long Term Geochemical Evolution of the Highland Pit Lake by Exxon (ML071840894)
- 2007 Long Term Pit Lake and Groundwater Hydrology at the Highland Mine site by Exxon (ML071840772)
- 2007 Highland Pit Lake Ecological Risk Assessment (ML071840783)
- All correspondences between the licensee (Exxon), NRC, and WDEQ
- 30 years of groundwater monitoring

Optional Subtask 5

The NRC Project Manager for the site will supply one copy of each report and the relevant information listed below:

- 40 CFR 192
- 10 CFR 40
- 20 years of available groundwater modeling data
- Phytoremediation Pilot Study Reports
- 2005 Environmental Assessment of Groundwater Compliance
- 1996 Baseline Risk Assessment
- 1999 Final site Observational Work Plan
- 2000 NRC Approval of Final Site Observational Work Plan
- 1993 Surface Remedial Action Plan

Optional Subtask 5

Deliverable

Review all relevant data submitted by DOE to NRC for this site and write a summary of the action(s) taken by DOE to date and those action(s) approved by the NRC

Submit a written summary to the NRC for review and comment.

Resolve NRC comments on written summary

Submit final written summary to NRC

Review the Final Phytoremediation Report and the Groundwater Compliance Action Plan

Prepare draft Request for Additional Information and draft TER for each document and submit to NRC for review and approval.

Resolve NRC comments on RAIs/draft TER

Submit final RAIs to NRC for submittal to DOE

Prepare final Technical Evaluation Report

Submit final Technical Evaluation Report to NRC for review and comment

Resolve NRC comments on final TER

Schedule

4 Weeks after receipt of NRC comments on TER

Optional Subtask 5 - Cont'

Deliverable

Schedule

Submit final Technical Evaluation Report to NRC

5 Weeks after receipt of NRC comments on TER

8 Technical Direction

Thomas McLaughlin is the designated NRC Technical Monitor for Subtask 1 and Dominick Orlando is the Technical Monitor for Subtask 5 for this procurement. Edina Knox-Davin is the designated NRC Project Officer. Tanya Oxenberg is the NRC Technical Project Manager. Any final decisions regarding technical direction must come from the NRC COR. Technical directions shall not constitute new assignments of work or changes of such a nature as to justify an adjustment in cost or the period of performance. Directions, if any, for changes in scope of work, cost, or period of performance will be issued by the NRC Contracting Officer.

9 Technical Reports

Technical reports for the task shall be submitted via electronic mail with electronic attachments consistent with the word processor in use at the NRC or portable document format (pdf), as appropriate. The CNWRA shall also provide one copy of each technical report to the NRC COR and Technical Project Manager.

10 Financial and Technical Status Reports

The CNWRA shall submit periodic technical and financial reports in accordance with the contract. The estimated staff effort should be recorded at the subtask level. The work accomplished and the degree of completeness should also be tracked by subtask. The reports are due within 20 calendar days after the end of the report period (i.e., each four week period). The Technical Project Manager has received two copies of the periodic status report and the COR has received one copy. See the contract for further distribution requirements.
