Subject: Safe storage of nuclear waste

I am writing to urge the Nuclear Regulatory Commission to seek hardened cask storage of nuclear wastes. Any other method is terrifically unsafe, given the length of life of nuclear materials. Living in Amherst, MA, we are downwind just about 20 miles from Vermont Yankee. Even marginally unsafe storage is VERY unsafe, given the poor management of Vermont Yankee. The entire Boston metropolitan area is not much further "downwind." How much of New England, how many lives, are you willing to gamble on in order to provide some marginal economy in storage costs? Thomas Lindeman, 224 Spencer Drive, Amherst Ma 01002.
