Subject: Storage of Nuclear Waste at Reactor Cites Confidence Report 2012

In my opinion, there should be no confidence given to above ground dry cask storage, nor wet pool storage, and the handling of the Fukushima multiple reactor (designed by GE) explosion is inadequate, unsafe, and not yet in control. Casks are subject to terrorist attacks. Pool damage by natural occurrences is quite likely. The Fukushima disaster is greater potentially than Chernobyl, and the public should be aware that containment at that site may become impossible. No system of nuclear waste storage has been demonstrated that can withstand 300 years and more of safe containment. Please don't try to conn us into believing that nuclear waste is the least bit safe or useful. May what Pres. Dwight Eisenhower didn't know about nuclear energy, not come back to hurt the country he served so well.
