

Buried Pipe NDE Update

Steve Kenefick
Senior Project Manager

NRC/Industry Meeting on Buried Pipe

April 4th, 2012 White Flint, MD

Buried Pipe NDE Technology

Objective / Benefits

- Benchmark buried pipe NDE capabilities
- Constructed mock-ups to assess technology
- Resources for vendors to tweak technologies and procedures
- Facilitate vendors understanding of nuclear industry requirements
- Provide utility support in implementing technology

Technology Identification, Development, and Assessment

- Completed / In-progress Assessments
 - Sonotest – Ultrasonic phased array wheel Probe
 - Olympus NDT – Ultrasonic phased array
 - Applus – Ultrasonic internal crawler
 - Quest Integrity – Ultrasonic flow through device
- License Renewal
 - Applus RTD INCOTEST® – Pulsed eddy current
 - Rock Solid BEM – Pulsed eddy current

Ultrasonic Phased Array Technology

Phased array probes

- Rapid Scanning
 - 100% coverage over probe width
- Permanent data storage
- Improved depth and extent sizing
- Sensitive to sharp flaws
- EPRI developed data acquisition and analysis techniques
 - Field trial scheduled
 - Report to be issued

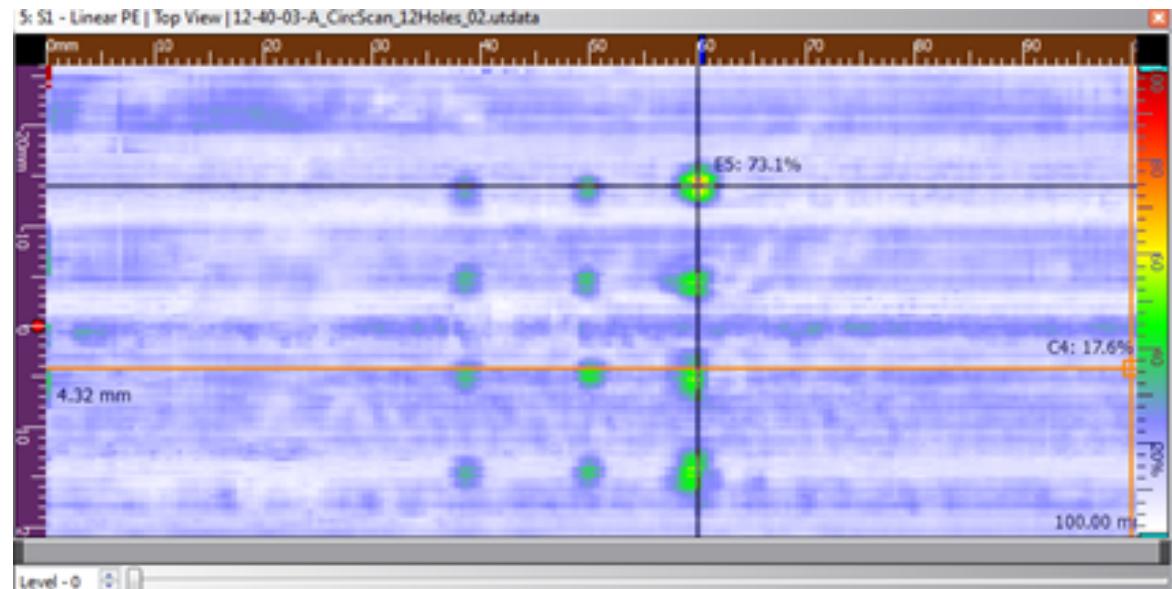

2-in wide array of 64 ultrasonic elements

Ultrasonic Phased Array Technology

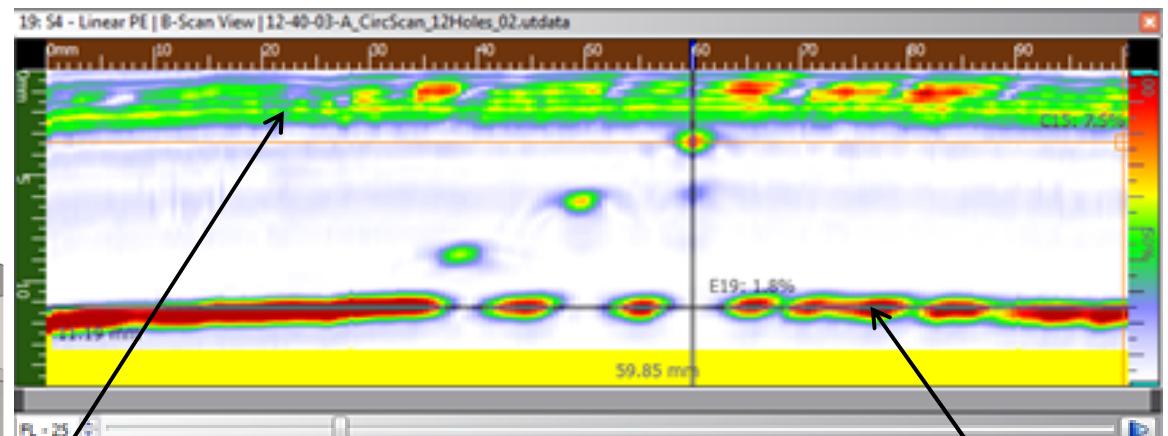

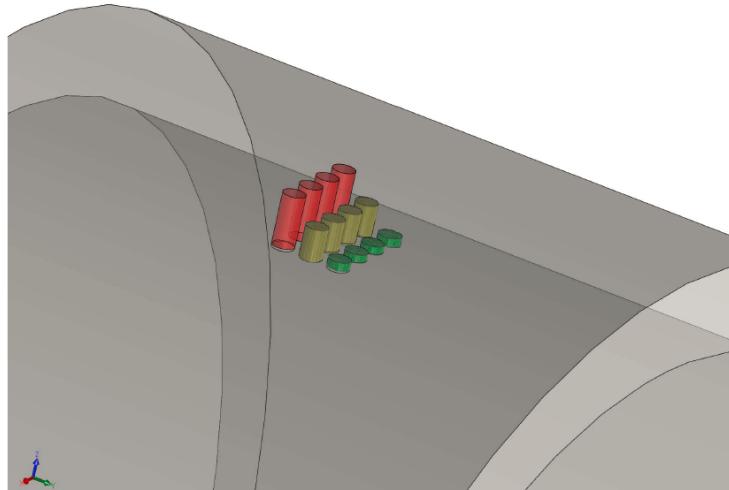

- C-scan (Top View) image of holes

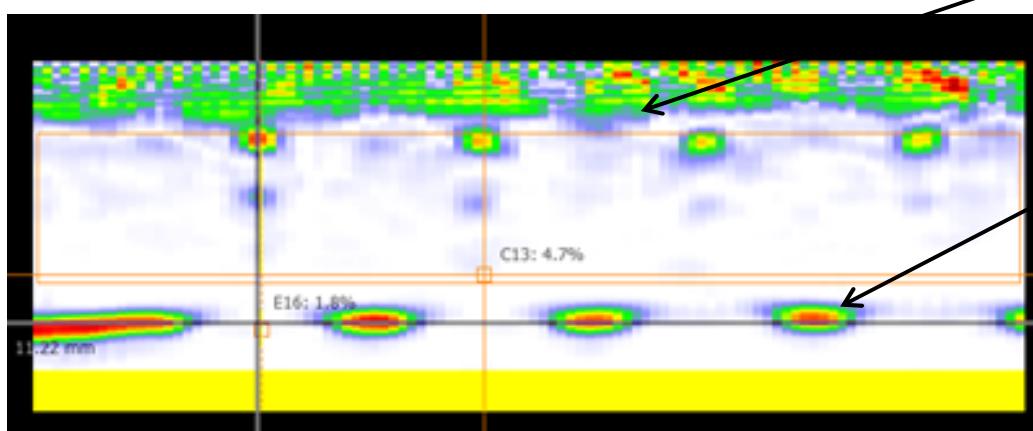

- Twelve 0.188-in diameter holes
- 0.375-in center-to-center
- Patch 0.750-in by 1.125-in

Ultrasonic Phased Array Technology

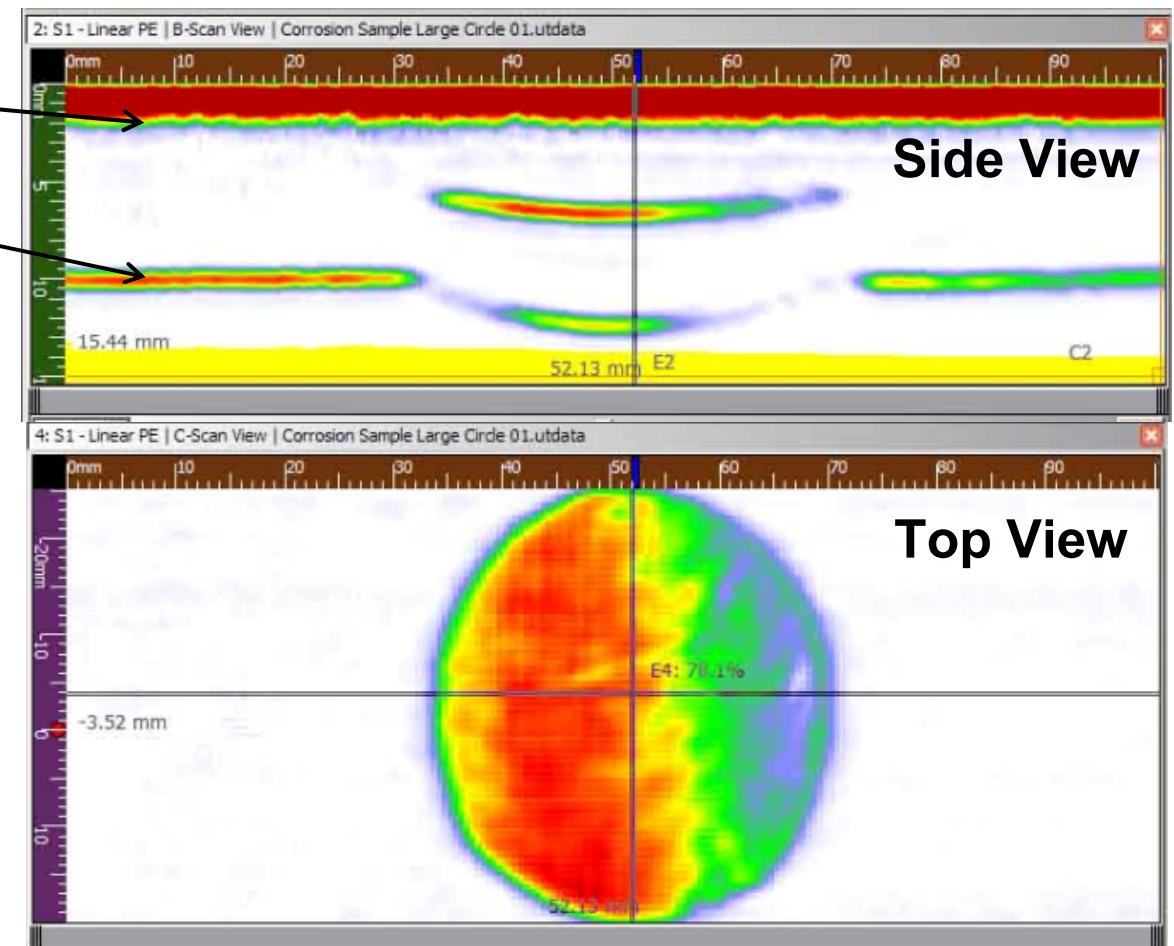

Outer Surface

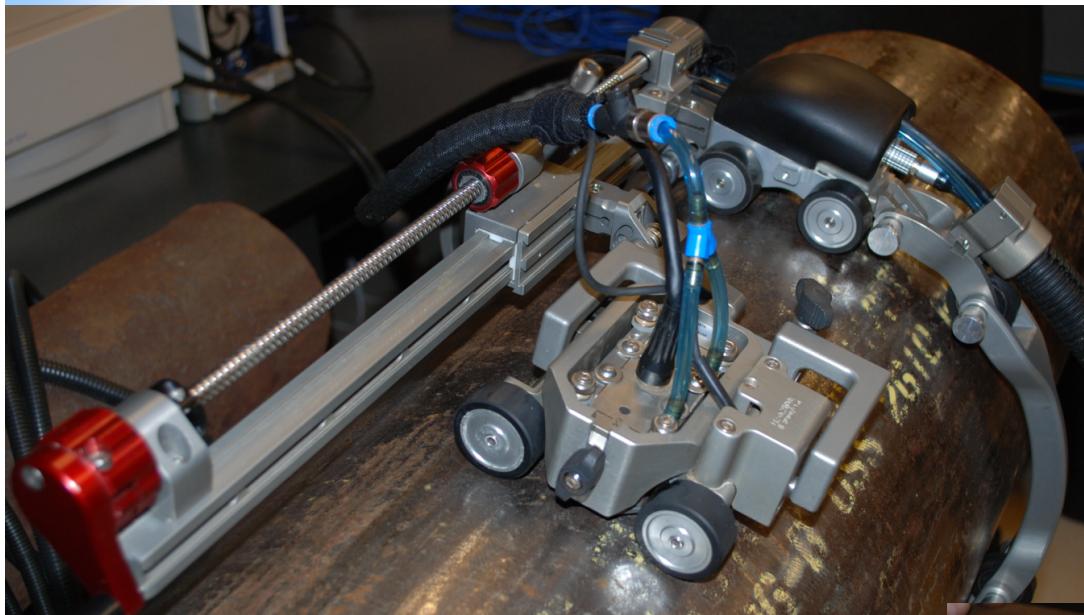

Inner Surface

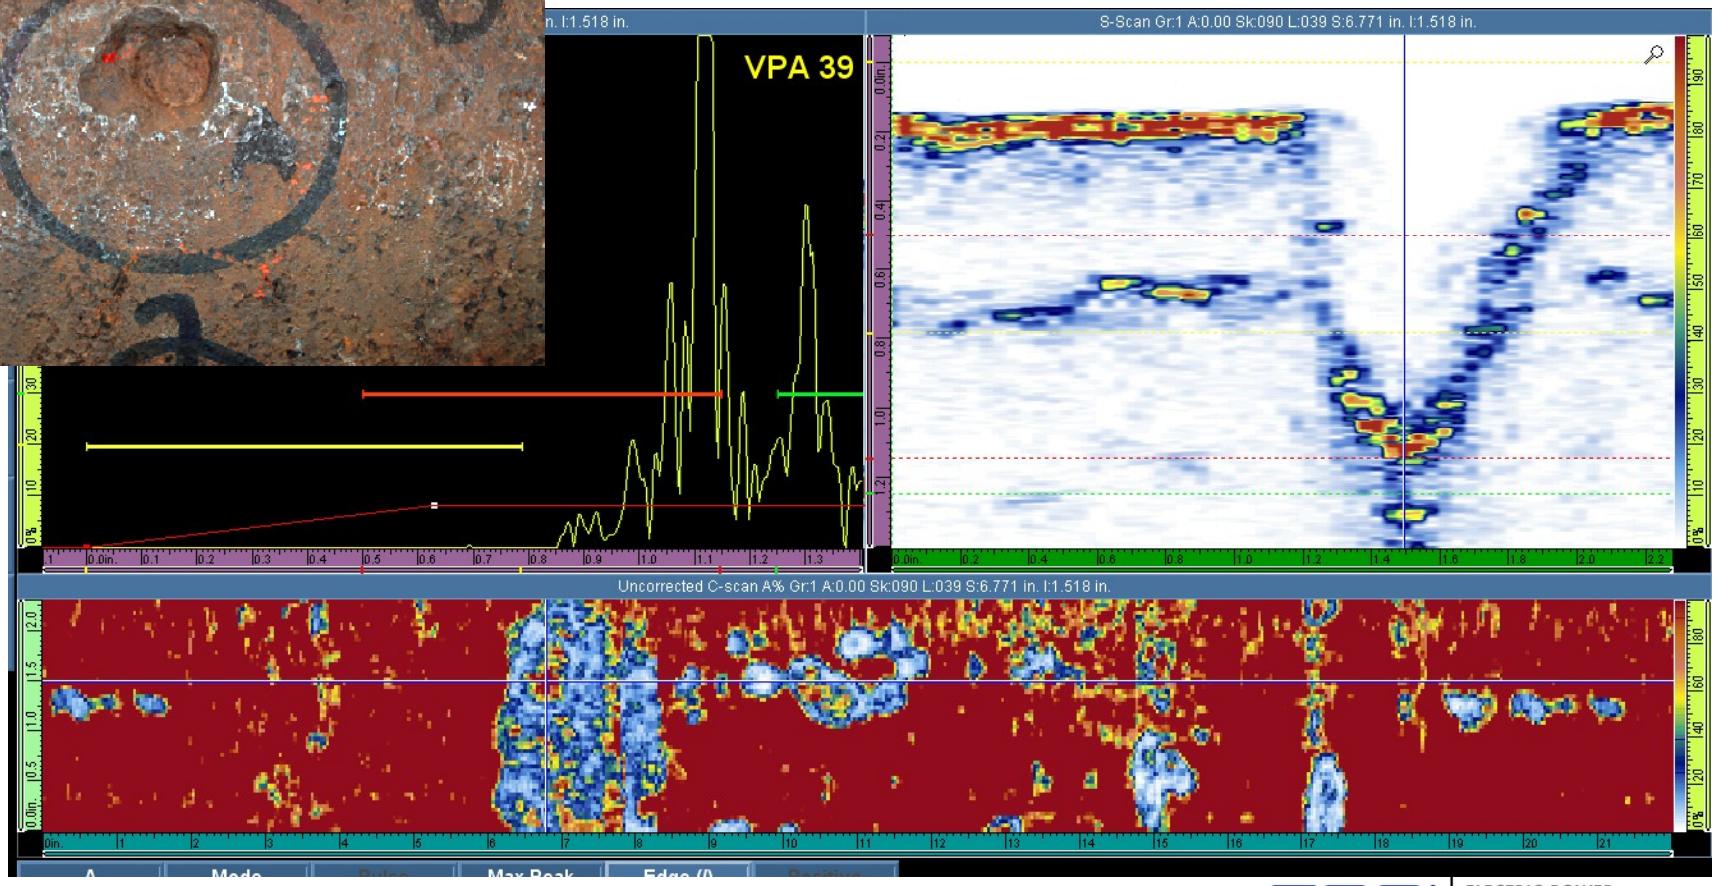

Ultrasonic Phased Array Technology

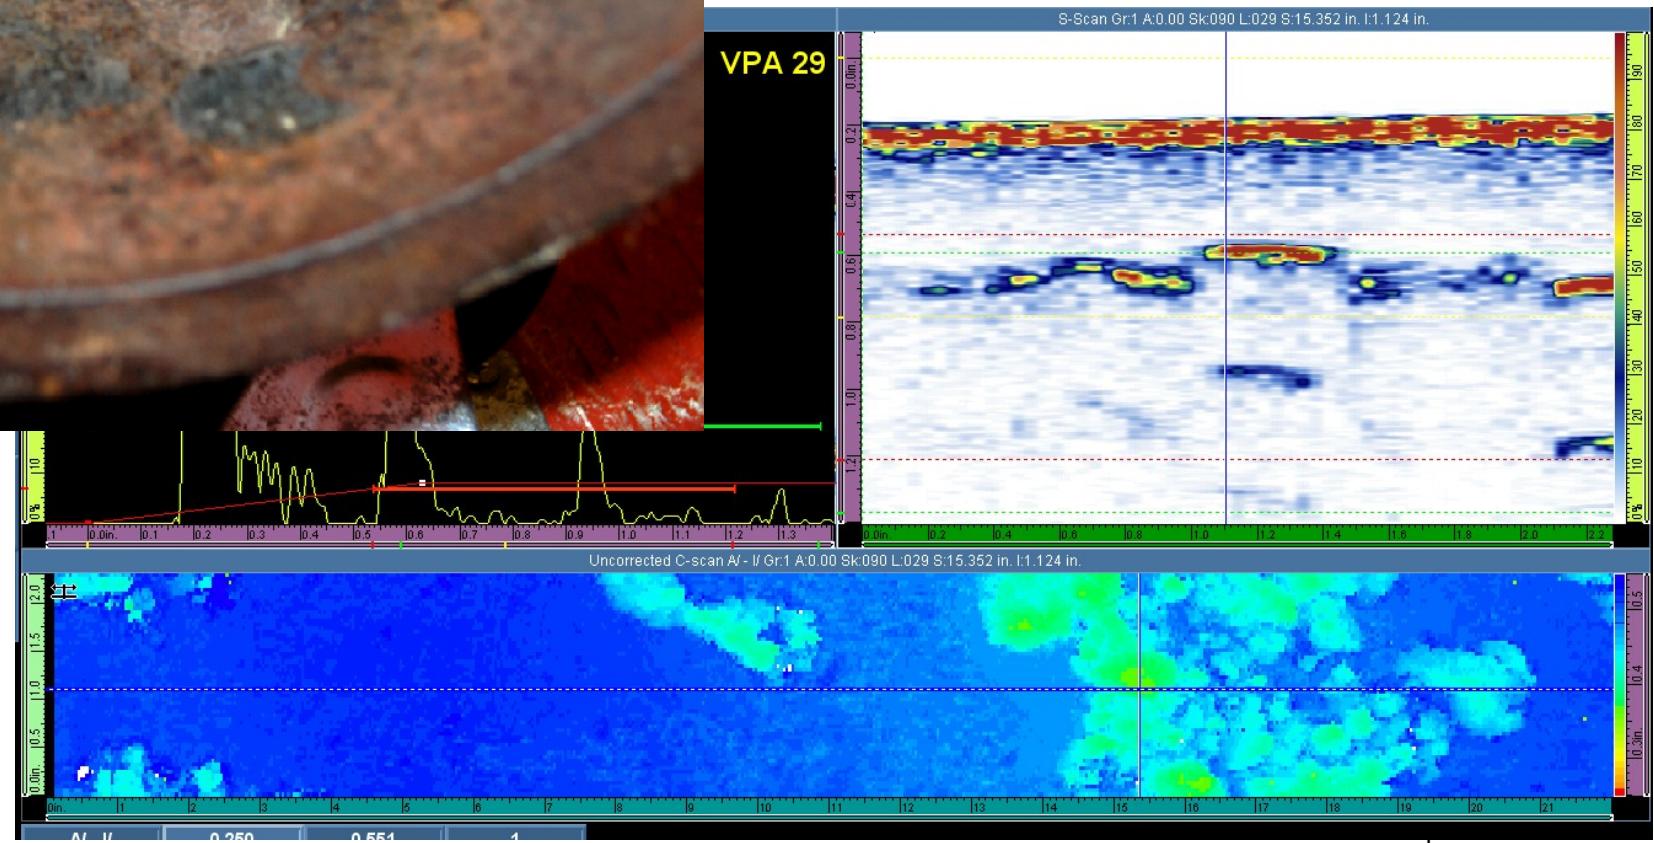

Ultrasonic Phased Array Technology

Ultrasonic Phased Array – results obtained from exterior corroded surface

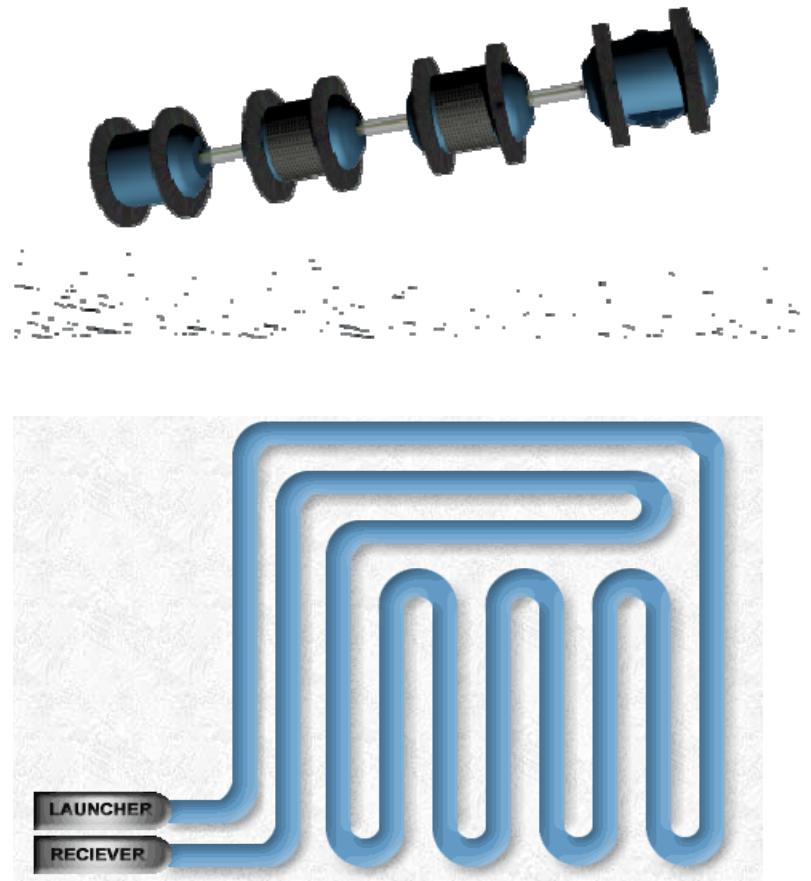

Ultrasonic Phased Array – results obtained from exterior showing interior surface corrosion

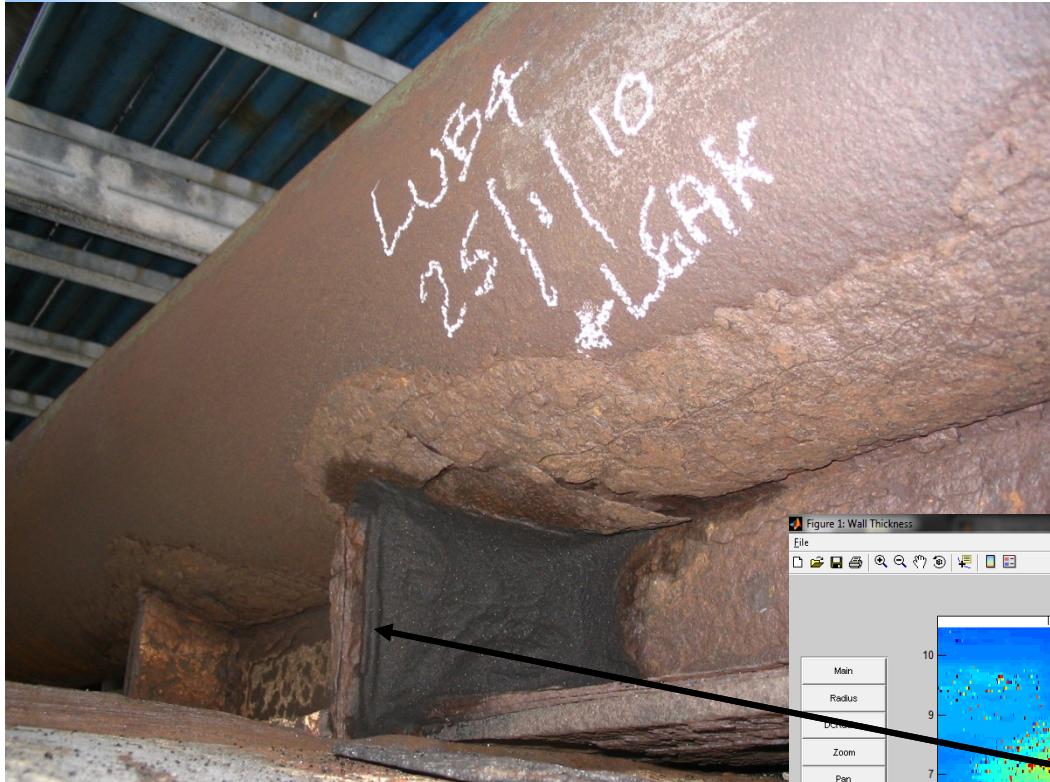

Internal Ultrasonic In-line Tool

Free swimming internal ultrasonic

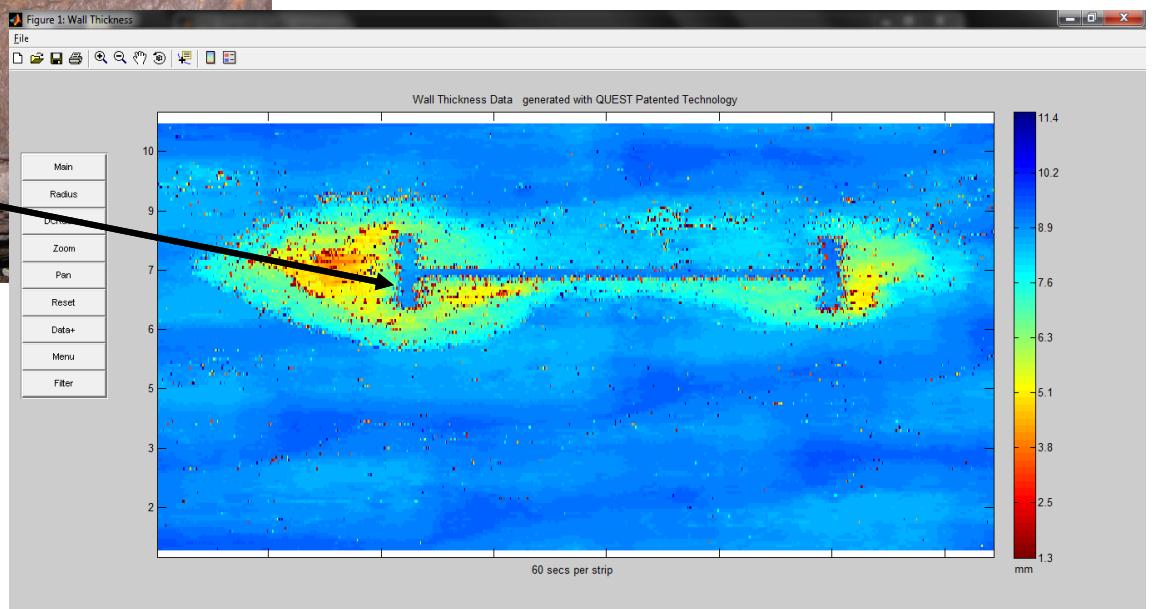

- Used in other industries
- Navigates Short Radius - 1D - 180° bends
- Transducer array provides 100% coverage
- On-board data collection
- Detect internal and external thinning

Internal Ultrasonic Tool

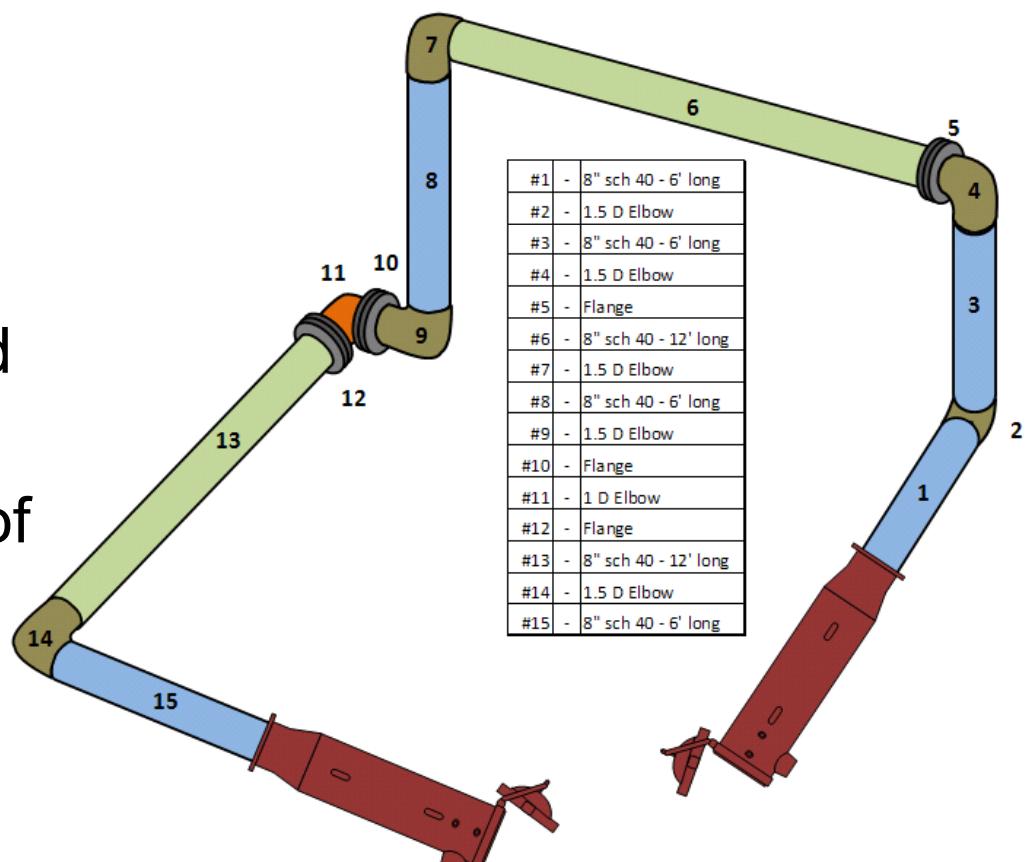

Example of corrosion damage around pipe support. (Courtesy Quest Integrity)

Recent Internal Ultrasonic Tool Assessment

Assessment Conducted on 60-ft long 8-in Diameter EPRI Mock-up

- Examined in <1 minute
- Full coverage of straight pipe sections
- Identified inside and outside surface connected discontinuities
- Working to facilitate pilot of technology

License Renewal Support

- Support of utility sea water buried conduit examination
 - Material: Ductile iron
 - Diameter: 48"
 - Wall thickness: 1.24"/1.61"
 - Joints: Bell and spigot
 - Lining: cement lined
- Technology demonstration
 - Applus – INCOTEST® (pulsed eddy current)
 - Rock Solid – BEM (pulsed eddy current)
 - Others considering demonstrating

License Renewal Mockup

- Diameter: 48"
- Thickness: 1.24"/1.61"
- Length: 50 ft
- Material: Ductile iron
- Joints: Bell and spigot
- ID: cement lined

NDE Technology Assessments

- Scheduled
 - WesDyne – Lamb wave internal crawler
 - General Electric – Saturation Low Frequency Eddy Current (SLOFEC)
 - A.hac – Internal ultrasonic
- Scheduling/considering
 - Diakont – EMATS
 - PICA – RFT
 - Mears – Inline MFL
 - Pure Technology – MFL

NDE Technology Assessments

EPRI 24-inch diameter mock-ups

GE In-line Inspection Tool

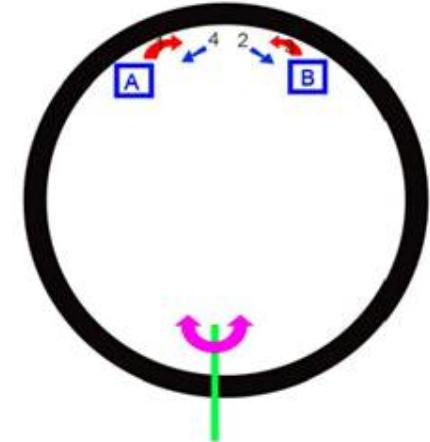

- New in-line inspection technology
 - Substantial commitment
 - SLOFEC™ electromagnetic and visual technology
 - Planning to add ultrasonics
- Claimed capabilities
 - Detect and map internal and external corrosion
 - Inspect through 10 mm of coating thickness
 - Inspect wall thickness up 18 mm
 - Flexible, self-propelled tethered robots
 - Can be used in liquid-fill, partially filled and empty pipes
 - Can transverse multiple 1.5D ends

GE In-line Inspection Tool

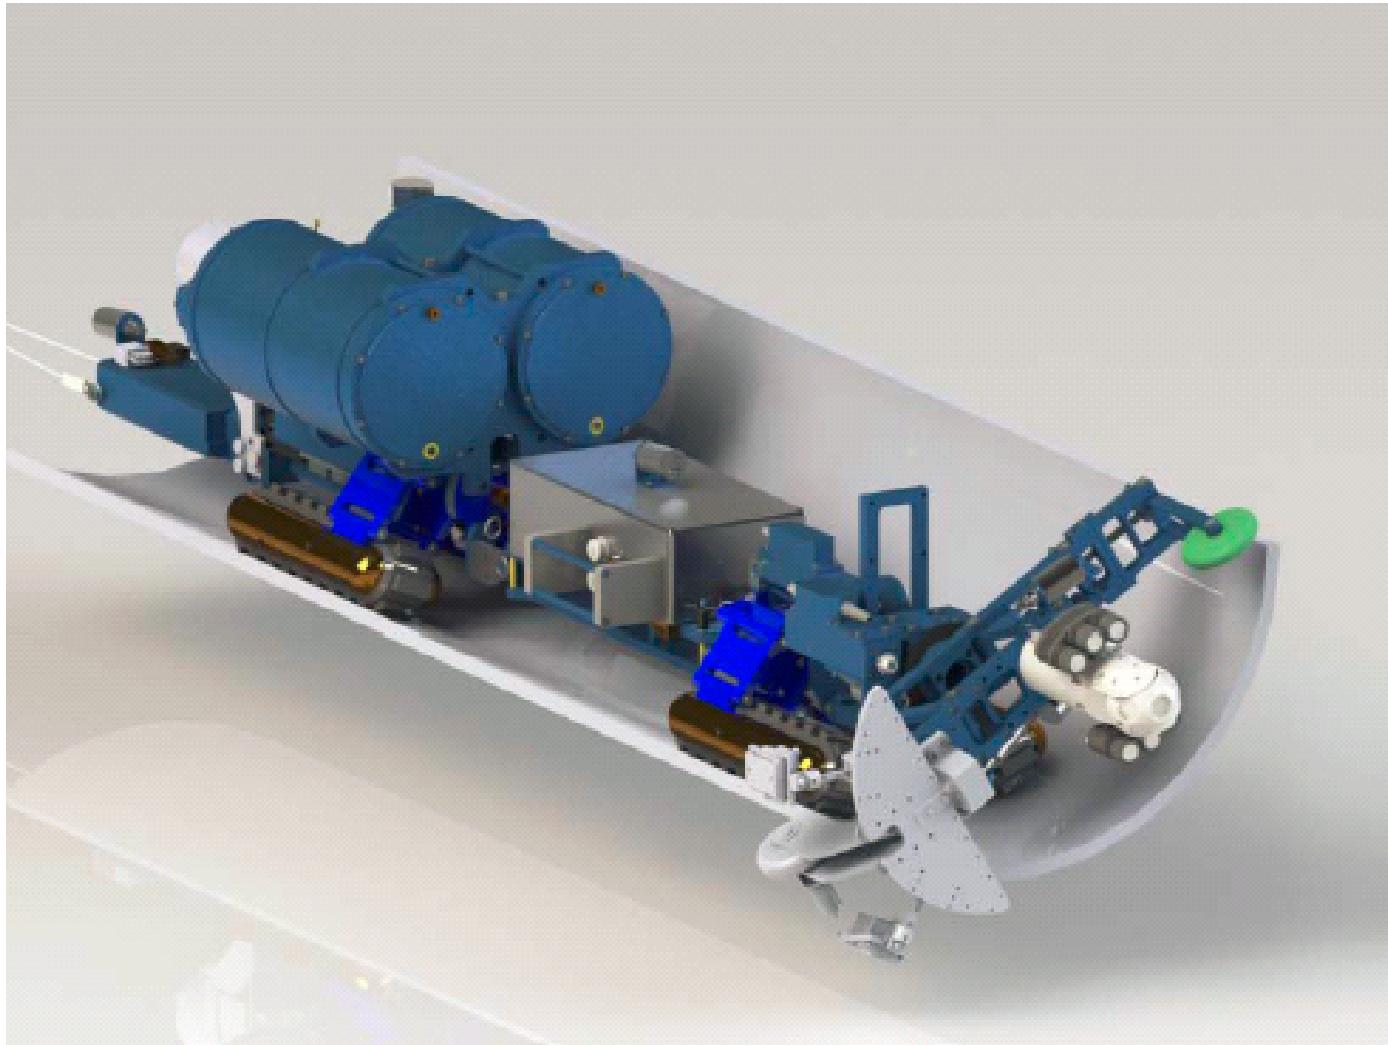

WesDyne In-line Inspection Tool

- New in-line inspection technology
 - Substantial commitment
- Lamb wave ultrasonic
 - 2 transducers generate Lamb waves around circumference of pipe
 - Transducers must be in contact with surface
 - Limited cleaning for small transducer footprint
 - WesDyne uses Lamb waves used in other applications
- Claimed capabilities
 - Detect and map internal and external corrosion
 - Detection capability – 0.25" diameter 20% through wall reflector in 3/8" thick pipe

WesDyne In-line Inspection Tool

A.hac Flow-through In-line Inspection Tool

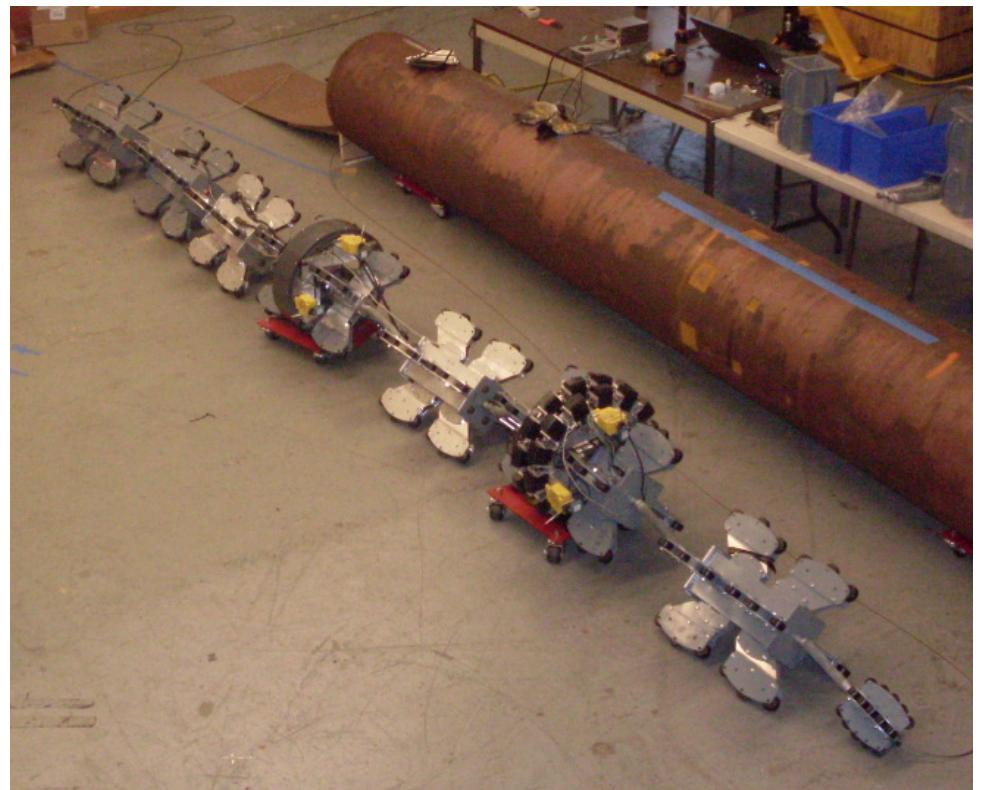

- Rotating 0-degree ultrasonic tool
 - Currently used in other industries
 - Pipe needs to be flooded
 - Clean internal surface required
- Examination performed at ANO
 - 2300-feet of piping in ~2.5 hours
 - Line contained several elbows
 - Ultrasonic Data Acquired
 - Circumferential direction ~2 degree increments
 - Axial direction ~10 mm
 - ~11.5 million measurements

A.hac Pig Launch and Retrieval Stations

EPRI In-line RFT Examination Status

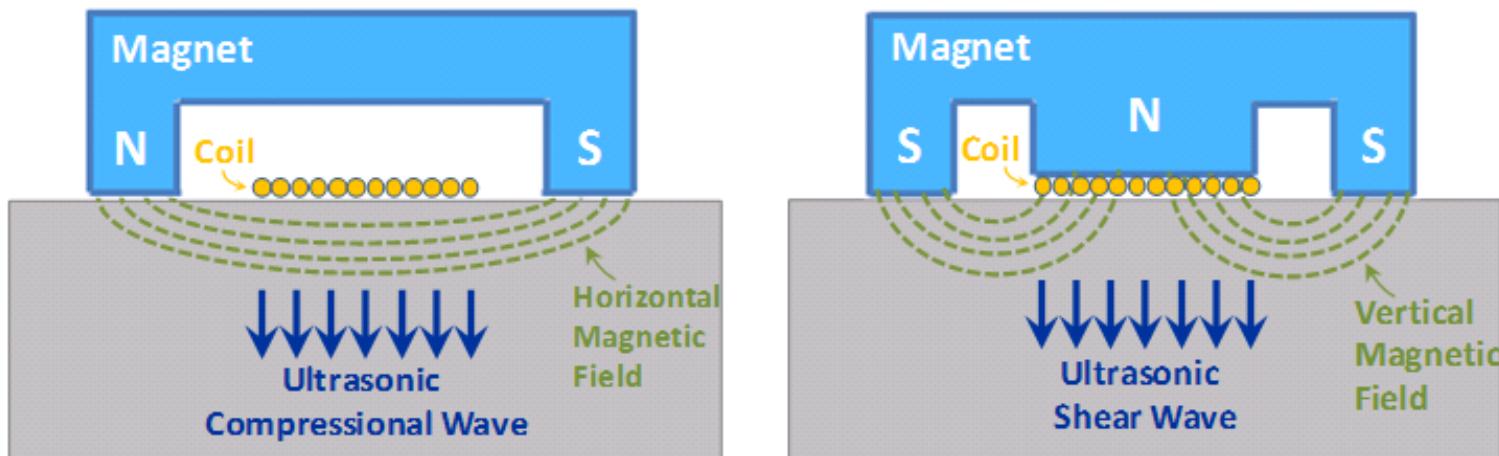

- Mechanical development complete
- EPRI license issued to Testex
 - Large diameter buried pipe technology
 - Intermediate diameter buried pipe technology
- RFT data analysis development still in process

Electromagnetic Acoustic Transducer (EMATS)

EMATS

- Electromagnetic method of introducing ultrasonic energy
- Capable of going through some degree of coatings
- Technology evaluation for buried pipe applications in progress

Guided Wave Personnel Qualifications

EPRI engaged in development of industry guided wave personnel qualification Codes and Standards

- Guided wave method qualification
 - American Society of Mechanical Engineers (ASME) drafted Section V Article 18
- Personnel Certification
 - American Society of Nondestructive Testing (ASNT)
 - British Institute of Non-Destructive Testing PCN
 - System for certification and qualification of guided wave testing personnel

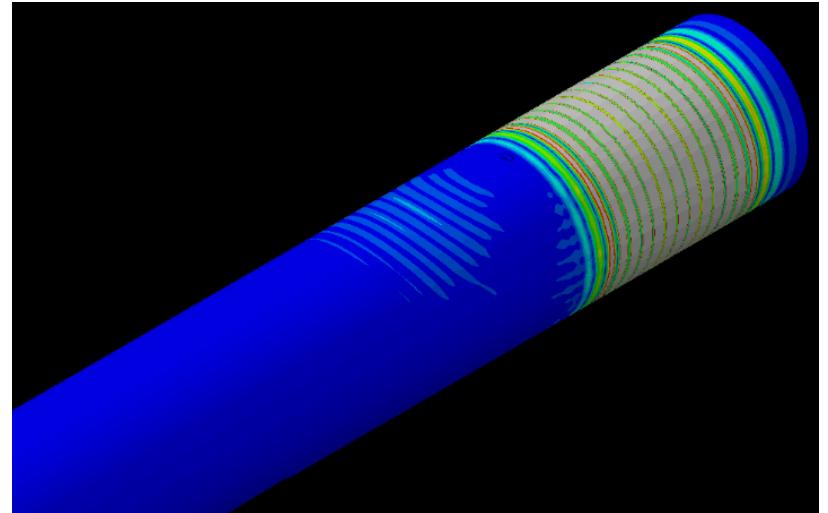

Guided Wave Computer Modeling and Empirical Study

Guided Wave Numerical Modeling:

- Alternative to building mockups
- Optimize data acquisition setups
- Data analysis tool
- Training and testing

Guided Wave Modeling Work

- Issued a report on results of modeling assessment (1022929)
 - Acquired guided wave data on piping mock-ups
 - Laser profile of discontinuities
 - FEM model of laser profiled discontinuities
 - Modeling data consistent with empirical data

Guided Wave Training Seminar

- Conducted 4 seminars at EPRI Charlotte in past 3 years
 - ~60 industry attendees
 - NRC attendees
- Seminar slides to be published
- Future seminars to be held on a cost recovery basis

EPRI Key Buried Pipe NDE Reports

- Nondestructive Evaluation: Buried Pipe Nondestructive Evaluation Reference Guide (1022930)
 - Substantial update replacing report 1021626
 - Overview of available buried pipe NDE technologies
 - Guidance on technology selection
- Buried Pipe Guided Wave Examination Reference Document (1019115)
- Nondestructive Evaluation: Remote Field Technology Assessment for Piping Inspection Including Buried and Limited Access Components (1021153)
- Nondestructive Evaluation: Guided Wave Status Report (1022929)

Together...Shaping the Future of Electricity
