CHAPTER 1

INTRODUCTION AND GENERAL DESCRIPTION OF THE PLANT

1.1 INTRODUCTION

This **section** of the referenced DCD is incorporated by reference with the following departures and/or supplements.

Add the following paragraphs to the end of DCD **Section 1.1**

STD SUP 1.1-1

This Final Safety Analysis Report (FSAR) incorporates the Design Control Document (DCD) (as identified in **Table 1.6-201**) for a simplified passive advanced light water reactor plant provided by Westinghouse Electric Company, the entity originally sponsoring and obtaining the AP1000 design certification documented in 10 CFR Part 52, Appendix D. Throughout this FSAR, the “referenced DCD” is the AP1000 DCD submitted by Westinghouse as Revision 19 including any supplemental material as identified in **Table 1.6-201**. Unless otherwise specified, reference to the DCD refers to Tier 2 information, including references to the sensitive unclassified non-safeguards information (including proprietary information) and safeguards information, contained in the AP1000 DCD. Such DCD information is included in this combined license application in the same manner as it is included in the AP1000 DCD, i.e., references in the DCD are included as references in the FSAR, and material incorporated by reference into the DCD is incorporated by reference into the FSAR. Appropriate agreements are in place to provide for the licensee's rights to possession (including constructive possession) and use of the withheld sensitive unclassified non-safeguards information (including proprietary information) and safeguards information referenced in the AP1000 DCD for the life of the project.

Appendix D to 10 CFR Part 52 is hereby incorporated by reference into the COL application.

LNP SUP 1.1-2

This FSAR is hereby submitted under Section 103 of the Atomic Energy Act by Florida Power Corporation, doing business as Progress Energy Florida, Inc. (PEF) to the Nuclear Regulatory Commission (NRC) as part of the application for two Class 103 combined licenses (COLs) to construct and operate two nuclear power plants under the provisions of 10 CFR 52 Subpart C.

1.1.1 PLANT LOCATION

Add the following text at the beginning of DCD **Subsection 1.1.1**:

LNP COL 2.1-1

The Levy Nuclear Plant Units 1 and 2 (LNP) site is located in Levy County, Florida (**Figure 2.1.1-201**). This is a large, primarily rural area located southwest

**Levy Nuclear Plant Units 1 and 2
COL Application
Part 2, Final Safety Analysis Report**

of Gainesville and west of Ocala and approximately 15.5 kilometers (km) (9.6 miles [mi.]) northeast of the Crystal River Energy Complex, an energy facility also owned by PEF (Figure 2.1.1-201). The nearest towns from the site are Inglis and Yankeetown, which are located 6.6 km (4.1 mi.) southwest and 12.9 km (8.0 mi.) southwest from the site, respectively. The Gulf of Mexico is located approximately 12.8 km (7.9 mi.) west of the proposed LNP site and Lake Rousseau lies about 4.8 km (3.0 mi.) to the south (Figure 2.1.1-202).

Figure 2.1.1-201 identifies the site location. Figure 1.1-201 identifies the plant arrangement within the site.

1.1.5 SCHEDULE

Add the following text to the end of DCD Subsection 1.1.5:

LNP COL 1.1-1 Table 1.1-203 displays the anticipated schedule for construction and operation of two AP1000 units at the LNP site. A site-specific construction plan and startup schedule will be provided to the NRC after issuance of the COL.

1.1.6.1 Regulatory Guide 1.70

Add the following text to the end of DCD Subsection 1.1.6.1.

STD SUP 1.1-6 This FSAR generally follows the AP1000 DCD organization and numbering. Some organization and numbering differences are adopted where necessary to include additional material, such as additional content identified in Regulatory Guide 1.206. Any exceptions are identified with the appropriate left margin annotation as discussed in Subsection 1.1.6.3 and Table 1.1-202.

1.1.6.3 Text, Tables and Figures

Add the following text to the end of DCD Subsection 1.1.6.3.

STD SUP 1.1-3 Table 1.1-202 describes the left margin annotations used in this document to identify departures, supplementary information, COL items, and conceptual design information.

FSAR tables, figures, and references are numbered in the same manner as the DCD, but the first new FSAR item is numbered as 201, the second 202, the third 203, and consecutively thereafter. When a table, figure, or reference in the DCD is changed, the change is appropriately left margin annotated as identified above.

**Levy Nuclear Plant Units 1 and 2
COL Application
Part 2, Final Safety Analysis Report**

New appendices are included in the FSAR with double letter designations following the pertinent chapter (e.g., 12AA).

When it provides greater contextual clarity, an existing DCD table or figure is revised by adding new information to the table or figure and replacing the DCD table or figure with a new one in the FSAR. In this instance, the revised table or figure clearly identifies the information being added, and retains the same numbering as in the DCD, but the table or figure number is revised to end with the designation "R" to indicate that the table or figure has been revised and replaced. For example, revised "Table 4.2-1" would become "Table 4.2-1R." New and revised tables and figures are labeled in the left margin as described in [Table 1.1-202](#).

1.1.6.5 Proprietary Information

Insert the following text to the end of DCD [Subsection 1.1.6.5](#).

STD SUP 1.1-4

Some portions of this FSAR may be considered as proprietary, personal, or sensitive and withheld from public disclosure pursuant to 10 CFR 2.390 and Regulatory Issue Summary (RIS) 2005-026. Such material is clearly marked and the withheld material is separately provided for NRC review.

1.1.6.6 Acronyms

Add the following text to the end of DCD [Subsection 1.1.6.6](#).

LNP SUP 1.1-5

[Table 1.1-201](#) provides a list of acronyms and abbreviations used in the LNP 1 and 2 FSAR in addition to the acronyms identified in DCD [Table 1.1-1](#) and system designation identified in [Table 1.7-201](#) and DCD [Table 1.7-2](#).

**Levy Nuclear Plant Units 1 and 2
COL Application
Part 2, Final Safety Analysis Report**

1.1.7 COMBINED LICENSE INFORMATION

Add the following text to the end of DCD **Subsection 1.1.7**.

LNP COL 1.1-1

This COL Item is addressed in **Subsection 1.1.5**.

**Levy Nuclear Plant Units 1 and 2

LNP SUP 1.1-5

**Table 1.1-201 (Sheet 1 of 33)
Acronyms and Abbreviations Used in the FSAR**

Acronym/Abbreviation	Definition
°C	degrees Celsius
°F	degrees Fahrenheit
χ/Q	Chi/Q (atmospheric dilution factor)
ϕ'	effective friction angle
ϕ_{cv}	critical void ratio friction angle
ν	Poisson's ratio
μm	Micrometer
$\mu\text{Ci}/\text{cm}^3$ or $\mu\text{Ci}/\text{cc}$	microcuries per cubic centimeter
$\mu\text{Ci}/\text{ml}$	microcuries per milliliter
2-D	two dimensional
3-D	three-dimensional
a_{max}	peak acceleration
AADT	Average Annual Daily Traffic
AASHTO	American Association of State Highway and Transportation Officials
ac.	Acres
ac.-ft.	acre-feet
ACI	American Concrete Institute
ADAMS	Agencywide Documents Access and Management System
AE	Architect Engineer
AFW	Auxiliary Feedwater System
AMS	American Meteorological Society

Acronyms and Abbreviations Used in the FSAR**

Acronym/Abbreviation	Definition
mi.	mile(s)
mi. ²	square miles
mi. ³	cubic miles
mi/hr	mile per hour
min	minute
MIS	marine oxygen isotope stage
Mg	milligram
MH	elastic silt
MHHW	mean higher high water
MHW	mean high water
ml	milliliter
ML	Silt
ml/d	milliliters per day
MLE	maximum likelihood estimate
ml/g	milliliters per gram
MLU	Multi-Layer Unsteady State
MLLW	mean lower low water
MLW	mean low water
mm	millimeter
MM	Modified Mercalli
MMI	Modified Mercalli Intensity
mm/h	millimeters per hour

Commence Operation		4 th Quarter 2025 (or later)

**Levy Nuclear Plant Units 1 and 2
COL Application
Part 2, Final Safety Analysis Report**

1.2 GENERAL PLANT DESCRIPTION

This **section** of the referenced DCD is incorporated by reference with the following departures and/or supplements.

1.2.2 SITE DESCRIPTION

In **Subsection 1.2.2** of the DCD, replace the information entitled "Site Plan" with the following text.

Site Plan

LNP COL 2.1-1
LNP COL 3.3-1
LNP COL 3.5-1

A typical site plan for a single unit AP1000 reference unit is shown in DCD **Figure 1.2-2**. The directions north, south, east, and west used in this description are the conventions used in the DCD for the orientation of AP1000 structures and equipment and differ from geographic north, south, east and west.

The site plan for LNP 1 and 2 is shown on **Figure 1.1-201**. Principal structures and facilities, parking areas, and roads are illustrated. Orientation of the two AP1000 units is such that "plant north" faces 45 degrees east from true north. Unless otherwise noted, directions in this FSAR are based on true north. Similarly, plant elevation in the DCD is 100'-0", whereas the plant building floor elevation for NGVD 88 is Elevation 51'-0"; therefore, DCD elevations are to be decreased by 49 ft. to be actual site elevations. The plant building floor elevation for design is NGVD 88 Elevation 51'-0" and corresponds to DCD Elevation 100'-0". The actual plant grade floor elevation will vary to accommodate floor slope and layout requirements.

As stated in DCD **Subsection 1.2.1.6.1**, the power block complex consists of five principal building structures: the nuclear island, the turbine building, the annex building, the diesel generator building, and the radwaste building. Each of these building structures is constructed on an individual basemat. The nuclear island consists of the containment building, the shield building, and the auxiliary building, all of which are constructed on a common basemat.

DCD **Figure 1.2-3** provides a functional representation of the principal systems and components that are located in each of the key AP1000 buildings. This figure identifies major systems and components that are contained in these structures.

Each of the two main cooling tower-circulating water pump complexes consist of mechanical draft cooling towers, a pump basin, circulating water pumps, and associated piping. The cooling towers are located west of the reactors. The circulating pumps are located near the cooling towers. The pumps circulate the cooling water from the pump basin to the main condensers and back to the cooling towers.

The makeup water pumps that provide makeup water to the circulating water system (part of the raw water pump system [RWS], saltwater subsystem) is

**Levy Nuclear Plant Units 1 and 2
COL Application
Part 2, Final Safety Analysis Report**

located south of the plant on the Cross Florida Barge Canal (CFBC). The pumps and wells of the RWS freshwater subsystem that supply the makeup requirements of the other plant systems are located south of the plant.

Road access to the site is from the west.

Construction of the LNP will utilize a barge slip located on the northern bank of the CFBC at the end of the barge slip access road from County Road 40 (CR-40). A heavy haul road will be used to transport equipment and materials from CR-40 to the LNP site.

During construction, a heavy lift crane is used to place major pieces of equipment such as the turbine-generator, the reactor vessel, the steam generators, containment ring sections, large structural modules, and other large or heavy equipment modules.

**Levy Nuclear Plant Units 1 and 2
COL Application
Part 2, Final Safety Analysis Report**

1.3 COMPARISONS WITH SIMILAR FACILITY DESIGNS

This **section** of the referenced DCD is incorporated by reference with no departures or supplements.

**Levy Nuclear Plant Units 1 and 2
COL Application
Part 2, Final Safety Analysis Report**

1.4 IDENTIFICATION OF AGENTS AND CONTRACTORS

This **section** of the referenced DCD is incorporated by reference with the following departures and/or supplements.

1.4.1 APPLICANT – PROGRAM MANAGER

Add the following paragraphs as the first three paragraphs in DCD **Subsection 1.4.1**.

- LNP SUP 1.4-1 Progress Energy Florida, Inc., (PEF) is the applicant for Combined Licenses for Levy Nuclear Plant Units 1 and 2 (LNP 1 and 2) and will own and operate LNP 1 and 2. PEF is a subsidiary of Progress Energy, Inc., an energy company based in Raleigh, North Carolina. Progress Energy, Inc. is a wholly-owned subsidiary of Duke Energy Corporation, an energy company based in Charlotte, North Carolina. PEF provides electricity and related services in central and northern Florida. The company serves more than 1.7 million customers in Florida.
- Duke has over 45 years of experience in the design, construction and operation of nuclear power stations, and currently has twelve nuclear operating units.
- Duke Energy Corporation (DEC), the largest electric power company in the United States, supplies and delivers energy to 7.1 million US customers. The company has over 58,000 megawatts of electric generating capacity in the Midwest, Florida and the Carolinas.
- On December 31, 2008, PEF executed a contract for Engineering, Procurement, and Construction (EPC) of LNP 1 and 2 with a Consortium comprised of Westinghouse and Stone & Webster, Inc. (also referred to herein as Shaw Stone & Webster or simply Shaw). The Consortium will act as the AP1000 provider and architect-engineer for LNP 1 and 2. PEF, as the constructor of LNP, has delegated responsibility for physical construction activities to the Consortium.
-

Add the following paragraphs to the end of DCD **Subsection 1.4.1**:

Contractors participating in the preparation of the COL Application are addressed in **Subsection 1.4.2.8**.

- LNP SUP 1.4-2 Shaw is a Fortune 500 company which has been an active participant in the nuclear industry for nearly 60 years, from providing engineering and design services for Shippingsport, the nation's first commercial nuclear power plant, to the restart of Tennessee Valley Authority's Browns Ferry Unit 1, which at the time was the largest nuclear construction project in the western hemisphere. Shaw continues to prove its leadership role in the nuclear industry by being part of the AP1000 Consortium. Shaw is part of a vertically integrated company, Shaw

**Levy Nuclear Plant Units 1 and 2
COL Application
Part 2, Final Safety Analysis Report**

Group, Inc., which has nearly 180 offices worldwide and over 21,000 employees, of which approximately 3,100 are nuclear professionals offering nuclear services on four continents.

Westinghouse is responsible for the overall plant design, AP1000 Design Certification revisions, procurement of primary NSSS equipment and power block major components including the Turbine Generator, and plant training simulator. Shaw is responsible for site development, construction, site specific design related work, secondary equipment procurement, module fabrication, and supply of bulk materials and commodities. Westinghouse and Shaw are jointly responsible for testing and startup. Fuel supply will be provided by Westinghouse under a separate contract.

Add the following new subsection after DCD **Subsection 1.4.2.7**:

LNP SUP 1.4-3 1.4.2.8 Other Contractors

Contractual relationships have been established with specialized consulting firms to assist in preparing the COL Application for LNP 1 and 2.

1.4.2.8.1 CH2M Hill, Inc.

CH2M Hill, Inc. is a full-service engineering, consulting, construction, and operations firm. They have experience in providing services in siting, licensing, site safety analysis reports, environmental reports, and emergency plans. CH2M Hill has demonstrated expertise with all aspects of nuclear facility development.

CH2M Hill, Inc has provided siting, environmental, emergency planning, site redress, geotechnical field investigation, geological, and seismological services to prepare the COL application for PEF.

1.4.2.8.2 Sargent & Lundy, LLC

Sargent & Lundy, LLC is a full-service architect-engineering firm with considerable nuclear plant expertise. The firm has demonstrated and proven capabilities in the design and licensing of nuclear plants both domestically and overseas. Sargent & Lundy, LLC has engineered, designed, planned, evaluated, and managed large, complex nuclear projects including 30 nuclear units.

Sargent & Lundy, LLC has provided engineering, management, and consulting services to prepare the COL application for PEF. This included project management and engineering services, developing Final Safety Analysis Report sections, developing the security plan, and preparing the COL application.

1.4.2.8.3 WorleyParsons Resources and Energy

WorleyParsons Resources and Energy is a full-service engineering firm with considerable nuclear plant expertise. The firm has demonstrated and proven

**Levy Nuclear Plant Units 1 and 2
COL Application
Part 2, Final Safety Analysis Report**

capabilities in the design and licensing of nuclear plants both domestically and overseas. WorleyParsons Resources and Energy has engineered, designed, planned, evaluated, and managed large, complex nuclear projects including 16 nuclear units and been involved in the development of an early site permit.

WorleyParsons Resources and Energy has provided engineering and consulting services to prepare the COL application for PEF. This included project management and engineering services, developing Final Safety Analysis Report sections, and preparing the COL application.

STD SUP 1.6-1 a) The NRC-accepted NEI documents identified by the A in the document number include the accepted template, the NRC safety evaluation, and corresponding responses to the NRC Requests for Additional Information. Only the accepted template is incorporated by reference. The remainder of the document is referenced but not incorporated into the FSAR.

LNP SUP 1.6-3 b) These documents are withheld from public disclosure.

(A) Denotes NRC approved document.

1.7 DRAWINGS AND OTHER DETAILED INFORMATION

This **section** of the referenced DCD is incorporated by reference with the following departures and/or supplements.

1.7.2 PIPING AND INSTRUMENTATION DIAGRAMS

Add the following text to the end of DCD **Subsection 1.7.2**.

LNP SUP 1.7-1

Table 1.7-201 contains a list of piping and instrumentation diagrams (P&IDs) or system diagrams and the corresponding FSAR figure numbers that supplement the DCD.

1.8 INTERFACES FOR STANDARD DESIGN

This **section** of the referenced DCD is incorporated by reference with the following departures and/or supplements.

Add the following paragraphs to the end of DCD **Section 1.8**.

LNP SUP 1.8-1 Departures from the referenced DCD are summarized in **Table 1.8-201**. **Table 1.8-201** lists each departure and the FSAR section or subsection impacted.

LNP SUP 1.8-2 DCD **Table 1.8-2** presents Combined License Information for the AP1000. Items requiring COL Applicant or COL Holder action are presented in **Table 1.8-202**. FSAR section(s) addressing these COL items are tabulated in this table. COL Holder items listed in **Table 1.8-202** are regulatory commitments of the COL Holder and these actions will be completed as specified in the appropriate section of the referenced DCD. Completion of these COL Holder items is the subject of a Combined License Condition as presented in a separate document submitted as part of this COL application.

LNP SUP 1.8-3 DCD **Table 1.8-1** presents interface items for the AP1000. FSAR section(s) addressing these interface items are tabulated in **Table 1.8-203**.

LNP SUP 1.8-1

**Table 1.8-201
Summary of FSAR Departures from the DCD**

Departure Number	Departure Description Summary	FSAR Section or Subsection
STD DEP 1.1-1	An administrative departure is established to identify instances where the renumbering of FSAR sections is necessary to effectively include content consistent with Regulatory Guide 1.206, as well as NUREG-0800. See Note a.	2.1.1, 2.1.4, 2.2.1, 2.2.4, 2.4.1, 2.4.15, 2.5, 2.5.6, 9.2.11, 9.2.12, 9.2.13, 9.5.1.8, 9.5.1.9, 13.1, 13.1.4, 13.5, 13.5.3, 13.7, 17.5, 17.6, 17.7, 17.8
STD DEP 8.3-1	The Class 1E voltage regulating transformers do not have active components to limit current.	8.3.2.2
a) The Departure is standard for AP1000 COLAs but the applicable FSAR Sections or Subsections may vary in the AP1000 Subsequent COLAs.

Part 2, Final Safety Analysis Report**

1.9 COMPLIANCE WITH REGULATORY CRITERIA

This **section** of the referenced DCD is incorporated by reference with the following departures and/or supplements.

1.9.1 REGULATORY GUIDES

Add the following paragraphs to the end of DCD **Subsection 1.9.1**:

STD COL 1.9-1

Divisions 2, 3, 6, 7, 9, and 10 of the regulatory guides do not apply to the construction or operational safety considerations and are not addressed in the FSAR.

Division 4 of the regulatory guides applies to the Environmental Report and the topics are addressed in the Environmental Report. Two Division 4 Regulatory Guides are addressed in **Appendix 1AA**.

Division 5 of the regulatory guides applies to materials and plant protection. As appropriate, the Division 5 regulatory guide topics are addressed in the DCD and plant-specific security plans (i.e., Physical Security Plan, Training and Qualification Plan, Safeguards Contingency Plan, and Cyber Security Plan).

Applicable Division 8 Regulatory Guides are addressed in **Appendix 1AA**.

Appendix 1AA provides a discussion of plant specific regulatory guide conformance, addressing new Regulatory Guides and new revisions not addressed by the referenced DCD. Regulatory Guides that are completely addressed by the DCD are not listed.

The following subsections provide a summary discussion of Divisions 1, 4, 5 and 8 of the regulatory guides as applicable to the content of this FSAR, or to the construction and/or operations phases.

1.9.1.1 Division 1 Regulatory Guides - Power Reactors

Add the following paragraphs to the end of DCD **Subsection 1.9.1.1**:

STD COL 1.9-1

Appendix 1AA provides an evaluation of the degree of compliance with Division 1 regulatory guides as applicable to the content of this FSAR, or to the site-specific design, construction and/or operational aspects. The revisions of the regulatory guides against which the degree of compliance is evaluated are indicated. Any exceptions or alternatives to the provisions of the regulatory guides are identified and justification is provided. One such general alternative is the use of previous revisions of the Regulatory Guide for design aspects as stated in the DCD in order to preserve the finality of the certified design (see Notes at the end of

**Levy Nuclear Plant Units 1 and 2
COL Application
Part 2, Final Safety Analysis Report**

Appendix 1AA). Table 1.9-201 identifies the appropriate regulatory guide to FSAR cross-references. The cross-referenced sections contain descriptive information applicable to the regulatory guide positions found in Appendix 1AA.

Superseded or canceled regulatory guides are not considered in Appendix 1AA or Table 1.9-201.

1.9.1.2 Division 4 Regulatory Guides - Environmental and Siting

Add the following as the first paragraph in DCD Subsection 1.9.1.2:

STD COL 1.9-1

Division 4 of the regulatory guides applies to the Environmental Report and the topics are addressed in the Environmental Report. Appendix 1AA provides an evaluation of the degree of compliance with Division 4 regulatory guides as applicable to the content of this FSAR, or to the site-specific design, construction and/or operational aspects. The revisions of the regulatory guides against which the plant is evaluated are indicated. Any exceptions or alternatives to the provisions of the regulatory guides are identified and justification is provided. One such general alternative is the use of previous revisions of the Regulatory Guide for design aspects as stated in the DCD in order to preserve the finality of the certified design (see Notes at the end of Appendix 1AA). For those regulatory guides applicable, Table 1.9-201 identifies the appropriate FSAR cross-references. The cross-referenced sections contain descriptive information applicable to the regulatory guide positions found in Appendix 1AA.

1.9.1.3 Division 5 Regulatory Guides - Materials and Plant Protection

Add the following as the first paragraph in DCD Subsection 1.9.1.3:

STD COL 1.9-1

Division 5 of the regulatory guides applies to materials and plant protection. Appendix 1AA provides an evaluation of the degree of conformance with Division 5 regulatory guides as applicable to the content of the AP1000 DCD and the plant-specific Cyber Security Plan. The plant-specific physical security plans (i.e., Physical Security Plan, Training and Qualification Plan, and Safeguards Contingency Plan) were developed using the template in NEI 03-12, Revision 6, "Template for the Security Plan, Training and Qualification Plan, Safeguards Contingency Plan [and Independent Spent Fuel Storage Installation Security Program]," which was endorsed for use by NRC letter dated April 9, 2009. The plant-specific physical security plans include no substantive deviations from the NRC-endorsed template in NEI 03-12, Revision 6. Therefore, the degree of conformance with Division 5 regulatory guides for the plant-specific physical security plans is consistent with the degree of conformance of NEI 03-12, Revision 6.

**Levy Nuclear Plant Units 1 and 2
COL Application
Part 2, Final Safety Analysis Report**

1.9.1.4 Division 8 Regulatory Guides - Occupational Health

Add the following paragraphs to the end of DCD **Subsection 1.9.1.4**:

STD COL 1.9-1

Appendix 1AA provides an evaluation of the degree of compliance with Division 8 regulatory guides as applicable to the content of this FSAR, or to the site-specific design, construction and/or operational aspects. The revisions of the regulatory guides against which the plant is evaluated are indicated. Any exceptions or alternatives to the provisions of the regulatory guides are identified and justification is provided. One such general alternative is the use of previous revisions of the Regulatory Guide for design aspects as stated in the DCD in order to preserve the finality of the certified design (see Notes at the end of **Appendix 1AA**). For those regulatory guides applicable, **Table 1.9-201** identifies the appropriate FSAR cross-references. The cross-referenced sections contain descriptive information applicable to the regulatory guide positions found in **Appendix 1AA**.

Superseded or canceled regulatory guides are not considered in **Appendix 1AA** or **Table 1.9-201**.

1.9.1.5 Combined License Information

Add the following as the first paragraph in DCD **Subsection 1.9.1.5**:

STD COL 1.9-1

Division 1, 4, 5 and 8 Regulatory Guides applicable to the content of this FSAR, or to the site-specific design, construction and/or operational aspects are listed in **Table 1.9-201** and **Appendix 1AA**.

1.9.2 COMPLIANCE WITH STANDARD REVIEW PLAN (NUREG-0800)

Add the following paragraph to the end of DCD **Subsection 1.9.2**:

STD SUP 1.9-1

Table 1.9-202 provides the required assessment of conformance with the applicable acceptance criteria and the associated FSAR cross-references.

The design related SRP acceptance criteria addressed by the certified design are identified as such in **Table 1.9-202**.

**Levy Nuclear Plant Units 1 and 2
COL Application
Part 2, Final Safety Analysis Report**

1.9.4.1 Review of NRC List of Unresolved Safety Issues and Generic Safety Issues

Add the following paragraphs to the end of DCD [Subsection 1.9.4.1](#):

STD COL 1.9-3

[Table 1.9-203](#) addresses the second un-numbered COL Information Item identified at the end of DCD [Table 1.8-2](#) and listed in [Table 1.8-202](#) as COL Information Item 1.9-3, "Unresolved Safety Issues and Generic Safety Issues." As such, [Table 1.9-203](#) lists those issues on DCD [Table 1.9-2](#) identified by Note "d," which apply to other than design issues, Note "f," which apply either to resolution of Combined License (COL) Information Items or to nuclear power plant operations issues, Note "h," which apply to issues unresolved pending generic resolution at the time of submittal of the AP1000 DCD, and any new Unresolved Safety Issues and Generic Safety Issues that have been included in NUREG-0933 (through supplement 30) since the DCD was developed. Many of these have since been resolved and incorporated into the applicable licensing regulations or guidance (e.g., the standard review plans). These resolved items (as indicated by NUREG-0933) are identified only as "Resolved per NUREG-0933." Many others are not in the list of items in NUREG-0933 Appendix B identified as applicable to new plants. These items are identified only as "Not applicable to new plants." For the remaining items, the table provides the FSAR sections that address the topic.

1.9.4.2.3 New Generic Issues

Add the following text in DCD [Subsection 1.9.4.2.3](#), following the AP1000 Position for Issue 185.

STD COL 1.9-3

Issue 186 Potential Risk and Consequences of Heavy Load Drops in Nuclear Power Plants

Discussion:

This issue concerns licensees operating within the regulatory guidelines of Generic Letter 85-11 that may not have taken adequate measures to assess and mitigate the consequences of dropped heavy loads.

FSAR Position:

There are no planned heavy load lifts outside those already described in the DCD. However, over the plant life there may be occasions when heavy loads not presently addressed need to be lifted (i.e. in support of special maintenance/ repairs). For these occasions, special procedures are generated that address the activity. Further discussion is provided in [Subsection 9.1.5.3](#).

**Levy Nuclear Plant Units 1 and 2
COL Application
Part 2, Final Safety Analysis Report**

Issue 189 Susceptibility of Ice Condenser and Mark III Containments to Early Failure From Hydrogen Combustion During a Severe Accident
Description

Discussion:

This issue concerns the early containment failure probability for ice condenser and BWR MARK III containments given the relatively low containment free volume and low containment strength in these designs.

FSAR Position:

The AP1000 design does not have an ice condenser containment or a Mark III containment. Therefore, this issue is not addressed in this FSAR.

Add the following text in DCD **Subsection 1.9.4.2.3** following the AP1000 Position for Issue 191.

STD COL 1.9-3 Issue 191 Assessment of Debris Accumulation on PWR Sump Performance (REV. 1)

Discussion:

Results of research on BWR ECCS suction strainer blockage identified new phenomena and failure modes that were not considered in the resolution of Issue A-43. In addition, operating experience identified new contributors to debris and possible blockage of PWR sumps, such as degraded or failed containment paint coatings.

FSAR Position:

The design aspects of this issue are addressed by the DCD. The protective coatings program controls the procurement, application, inspection, and monitoring of Service Level I and Service Level III coatings with the quality assurance features discussed above. The protective coatings program complies with Regulatory Guide 1.54, and is controlled and implemented by administrative procedures. The program is discussed in **Subsection 6.1.2.1.6**.

Administrative procedures implement the containment cleanliness program. Implementation of the program minimizes the amount of debris that might be left in containment following refueling and maintenance outages. The program is consistent with the containment cleanliness program used in the evaluation discussed

**Levy Nuclear Plant Units 1 and 2
COL Application
Part 2, Final Safety Analysis Report**

in DCD **Subsection 6.3.8.2**. The program is discussed in **Subsection 6.3.8.1**.

Issue 196 Boral Degradation

Discussion:

The issue specifically addresses the use of Boral in long-term dry storage casks for spent reactor fuel.

FSAR Position:

Long-term dry storage casks for spent reactor fuel are not used and therefore this issue is not addressed in this FSAR.

1.9.5.1.5 Station Blackout

Add the following text to the end of DCD **Subsection 1.9.5.1.5**.

STD SUP 1.9-3

Training and procedures to mitigate a 10 CFR 50.63 “loss of all alternating current power” (or station blackout (SBO)) event are implemented in accordance with **Sections 13.2** and **13.5**, respectively. As recommended by NUMARC 87-00 (**Reference 201**), the SBO event mitigation procedures address response (e.g., restoration of onsite power sources), ac power restoration (e.g., coordination with transmission system load dispatcher), and severe weather guidance (e.g., identification of actions to prepare for the onset of severe weather such as an impending tornado), as applicable. The AP1000 is a passive design and does not rely on offsite or onsite ac sources of power for at least 72 hours after an SBO event, as described above.

Restoration from an SBO event will be contingent upon ac power being made available from any one of the transmission lines described in Section 8.2 or any one of the standby diesel generators.

1.9.5.2.15 Severe Accident Mitigation Design Alternatives

Add the following text to the end of DCD **Subsection 1.9.5.2.15**.

FSAR Position:

STD SUP 1.9-2

The severe accident mitigation design alternatives (SAMDA) evaluation for AP1000 contained in DCD **Appendix 1B** is not incorporated into this FSAR, but is addressed in the COL application Environmental Report.

**Levy Nuclear Plant Units 1 and 2
COL Application
Part 2, Final Safety Analysis Report**

1.9.5.5 Operational Experience

Add the following paragraph to the end of DCD **Subsection 1.9.5.5**.

STD COL 1.9-2 **Table 1.9-204** lists the Bulletins and Generic Letters addressed by topical discussion in this FSAR. **Table 1.9-204** also lists Bulletins and Generic Letters categorized as part of the first un-numbered COL Information Item identified at the end of DCD **Table 1.8-2** and listed in **Table 1.8-202** as COL Information Item 1.9-2. **Table 1.9-204** provides the appropriate FSAR cross-references for the discussion of the topics addressed by those Bulletins and Generic Letters. Bulletins or Generic Letters issued after those listed in the DCD are also included in **Table 1.9-204**. Issues identified as “procurement” or “maintenance” or “surveillance” in WCAP-15800 are addressed as part of the scope of the certified design and are not specifically identified in **Table 1.9-204**. Issues identified as “procedural” in WCAP-15800 are addressed by the procedures discussed in DCD **Section 13.5** and are not specifically identified in **Table 1.9-204**. Other items in WCAP-15800, including the Circulars and Information Notices, are considered to have been adequately addressed based on the guidance identified in Regulatory Guide 1.206 and the NRC Standard Review Plans.

Notes (from DCD [Table 1.9-2](#)):

(d) Issue is not a design issue (Environmental, Licensing, or Regulatory Impact Issue; or covered in an existing NRC program).

(f) Issue is not an AP1000 design certification issue. Issue is applicable to current operating plants or is programmatic in nature.

(h) Issue is unresolved pending generic resolution (for example, prioritized as High, Medium, or possible resolution identified).

(j) The AP600 DSER (Draft NUREG-1512) identified this item as required to be discussed.

**Levy Nuclear Plant Units 1 and 2
COL Application
Part 2, Final Safety Analysis Report**

Add the following section after DCD [Section 1.9](#).

1.10 NUCLEAR POWER PLANTS TO BE OPERATED ON MULTI-UNIT SITES

STD SUP 1.10-1 The certification for the AP1000 is for a single unit. Dual siting of AP1000 is achievable, provided that the centerlines of the units are sufficiently separated. The primary consideration in setting this separation distance is the space needed to support plant construction via the use of a heavy-lift crane.

Security controls during construction and operation are addressed in the Physical Security Plan.

Management and administrative controls are established to identify potential hazards to structures, systems, and components (SSCs) of an operating unit as a result of construction activities at a unit under construction. Controls within this section are not required unless there is an operating unit on the site, i.e., a unit with fuel loaded into the reactor vessel. Advance notification, scheduling and planning allow site management to implement interim controls to reduce the potential for impact to SSCs.

This section presents an assessment of the potential impacts of construction of one unit on SSCs important to safety for an operating unit, in accordance with 10 CFR 52.79(a)(31). This assessment includes:

- Identification of potential construction activity hazards
- Identification of SSCs important to safety and limiting conditions for operation (LCOs) for the operating unit
- Identification of potentially impacted SSCs and LCOs
- Identification of applicable managerial and administrative controls

1.10.1 POTENTIAL CONSTRUCTION ACTIVITY HAZARDS

LNP SUP 1.10-1 The power blocks for LNP 1 and 2 have a minimum separation of at least 274 meters (900 feet) between plant centerlines.

STD SUP 1.10-1 Construction activities may include site exploration, grading, clearing, and installation of drainage and erosion-control measures; boring, drilling, dredging, pile driving and excavating; transportation, storage and warehousing of equipment; and construction, erection, and fabrication of new facilities.

**Levy Nuclear Plant Units 1 and 2
COL Application
Part 2, Final Safety Analysis Report**

Construction activities and their representative hazards to an operating unit are shown in [Table 1.10-201](#).

1.10.2 POTENTIALLY IMPACTED SSCS AND LIMITING CONDITIONS FOR OPERATION

The construction activities described above were reviewed for possible impact to operating unit SSCs important to safety.

-
- LNP SUP 1.10-1
- LNP 1 and 2 SSCs important to safety are described in LNP FSAR [Chapter 3](#).
 - As indicated in [Chapter 16](#), the LCOs for LNP 1 and 2 are located in Part 4 of the COL Application.

STD SUP 1.10-1

The initial assessment consisted of a review of individual SSCs and LCOs to determine whether an item is applicable, or may be eliminated due to either examination or being internal and specific to an operating unit. The assessment identified the SSCs that could reasonably be expected to be impacted by construction activities unless administrative and managerial controls are established. The results of the assessment are presented in [Table 1.10-202](#).

Periodic assessment during construction is addressed in [Appendix 13AA, Subsection 13AA.1.1.1.1.8](#).

1.10.3 MANAGERIAL AND ADMINISTRATIVE CONTROLS

To eliminate or mitigate construction hazards that could potentially impact operating unit SSCs important to safety, specific managerial and administrative controls have been identified as shown in [Table 1.10-203](#).

Although not all of the managerial and administrative construction controls are necessary to protect the operating unit, the identified controls are applied to any operating unit as a conservative measure. This conservative approach provides reasonable assurance of protecting the identified SSCs from potential construction hazards and preventing the associated LCOs specified in the operating unit Technical Specifications from being exceeded as a result of construction activities, as discussed below.

The majority of the operating unit SSCs important to safety are contained and protected within safety-related structures. The managerial controls protect these internal SSCs from postulated construction hazards by maintaining the integrity and design basis of the safety-related structures and foundations. Heavy load drop controls, crane boom failure standoff requirements, ground vibration controls and construction generated missile(s) control are examples of managerial controls that provide this protection.

**Levy Nuclear Plant Units 1 and 2
COL Application
Part 2, Final Safety Analysis Report**

Other managerial controls support maintaining offsite power, control of hazardous materials and gases, and protection of cooling water supplies and safety system instrumentation. These managerial controls prevent or mitigate external construction impacts that could affect SSCs important to safety. These controls also prevent or mitigate unnecessary challenges to safety systems caused by plant construction hazards, such as disruption of offsite transmission lines or impact to plant cooling water supplies.

The above discussed controls to eliminate or mitigate construction hazards that could potentially impact operating unit SSCs important to safety are in place when there is an operating nuclear unit on the site. Additional controls may be established during construction as addressed in [Appendix 13AA, Subsection 13AA.1.1.1.1.8](#).

STD COL 1.9-1

Electrostatic/Electroscope Type Dosimeters".

Regulatory Guide 8.5, Rev. 1, 3/81 - Criticality and Other Interior Evacuation Signals

General Conforms

Regulatory Guide 8.6, Rev. 0, 5/73 - Standard Test Procedure for Geiger-Muller Counters

General Exception Instrument calibration program is based upon criteria in ANSI N323A-1997 (with 2004 Correction Sheet) "Radiation Protection Instrumentation Test and Calibration, Portable Survey Instruments." The ANSI 42.3-1969 Standard is no longer recognized as sufficient for calibration of modern instruments.

Regulatory Guide 8.7, Rev. 2, 11/05 - Instructions for Recording and Reporting Occupational Radiation Dose Data

General Conforms

Regulatory Guide 8.8, Rev. 3, 6/78 – Information Relevant to Ensuring That Occupational Radiation Exposures at Nuclear Power Stations Will Be As Low As Is Reasonably Achievable

Conformance of the design aspects is as stated in the DCD. Conformance with Revision 3 of this Regulatory Guide for programmatic and/or operational aspects is documented below.

C.1	Conforms	
C.3.a	Conforms	
C.3.b	Exception	Regulatory Guide 1.16 C.1.b.(3) data is no longer reported. Reporting per C.1.b(2) is also no longer required.
C.3.c	Conforms	

**Levy Nuclear Plant Units 1 and 2
COL Application
Part 2, Final Safety Analysis Report**

Criteria Section	Referenced Criteria	FSAR Position	Clarification/ Summary Description of Exceptions
STD COL 1.9-1 C.4.b- C.4.d	ANSI Z-88.2, Regulatory Guide 8.15, NUREG-0041	Conforms	Conformance is with the latest revision of NUREG-0041.

Regulatory Guide 8.9, Rev. 1, 7/93 – Acceptable Concepts, Models, Equations, and Assumptions for a Bioassay Program

General Conforms

Regulatory Guide 8.10, Rev. 1-R, 5/77 – Operating Philosophy For Maintaining Occupational Radiation Exposures as Low as is Reasonably Achievable

General Conforms

Regulatory Guide 8.13, Rev. 3, 6/99 – Instruction Concerning Prenatal Radiation Exposure

General Conforms

Regulatory Guide 8.15, Rev. 1, 10/99 – Acceptable Programs for Respiratory Protection

General Conforms

Regulatory Guide 8.27, Rev. 0, 3/81 – Radiation Protection Training for Personnel at Light-Water-Cooled Nuclear Power Plants

General Conforms

Regulatory Guide 8.28, Rev. 0, 8/81 – Audible-Alarm Dosimeters

General ANSI
N13.27-1981 Conforms

Regulatory Guide 8.29, Rev. 1, 2/96 – Instruction Concerning Risks from Occupational Radiation Exposure

General Conforms

Regulatory Guide 8.34, Rev. 0, 7/92 – Monitoring Criteria and Methods To Calculate Occupational Radiation Doses

General Conforms

**Levy Nuclear Plant Units 1 and 2
COL Application
Part 2, Final Safety Analysis Report**

Criteria Section	Referenced Criteria	FSAR Position	Clarification/ Summary Description of Exceptions

STD COL 1.9-1

Regulatory Guide 8.35, Rev. 0, 6/92 – Planned Special Exposures

General Conforms

Regulatory Guide 8.36, Rev. 0, 7/92 – Radiation Dose to the Embryo/Fetus

General Conforms

Regulatory Guide 8.38, Rev. 1, 5/06 – Control of Access to High and Very High Radiation Areas in Nuclear Power Plants

Conformance of the design aspects is as stated in the DCD. Conformance with Revision 1 of this Regulatory Guide for programmatic and/or operational aspects is documented below.

General Conforms

Note a. Above stated general alternatives regarding the use of previous revisions of the Regulatory Guide for design aspects as stated in the DCD is provided to preserve the finality of the certified design. Further, each stated conformance with the programmatic and/or operational aspects is only to the extent that a design change or departure from the approved DCD is not required to implement those programmatic and/or operational aspects. As the operational and programmatic aspects become more fully defined (for example, during preparation, approval, or initial implementation of plant procedures), there exists a potential that a conflict could be identified between the design as certified in the DCD and the programmatic and/or operational aspects of the guidance. In such cases, the design certification (rule) becomes the controlling factor, and the design conformance to the Regulatory Guide is per the revision stated in the DCD.

Note b. A “Criteria Section” entry of “General” indicates a scope for the conformance statement of “all regulatory guide positions related to programmatic and/or operational aspects.” Thus, an associated conformance statement of “Conforms” indicates that the applicant “complies with all regulatory guide positions related to programmatic and/or operational aspects.”
