Subject: Indian Point Relicensing

Electricity production by nuclear means is dangerous, expensive, dirty and irrational. It is time to stop the re-licensing of existing plants and to prevent the licensing of new plants. As cancer rates skyrocket, as accidents and shutdowns occur regularly, as climate change makes water an even more precious resource, it is ridiculous to depend on this means of energy production. No relicensing of Indian Point. Thank you for your consideration. Anne Craig, 132 Murdock Ave., Asheville, N.C.
