Subject: Indian Point relicensing

Indian Point should NOT be relicensed. IOf all the issues that acould be raised, I wish to addrtsess two that are related.

The plant is sited at the intersection of two earthquake faults. No one can predict an earthquake nore than 10 minutes (if that!) before it hits. Nor it's strength. The longer the "quiet time" since the last convulsion, the more likely there will be an episode. The plant, if not destroyed would be disastrously damaged. The death toll would be horrendous. THERE IS NO WAY THE POPULATION WITHIN THE IMMEDIATE FALL OUT ZONE COULD BE EVACUATED.

Please, Do Not, DO NOT relicense Indian Point nuclear power plant.

DOCKETED
USNRC
