Subject: NO Nukes

Hi to build a Nuclear Power Plant that lasts at best 100 years and put Nuclear Rods in it that lasts 100,000 years is insanity at best. There is no where to put the waste (garbage) spent rods? We need to shut down this Power House before there is a problem that would affect millions of people. It could close down New York City. Chernobyl made areas 100 miles away uninhabitable. I only hope if you keep this Power House working you live in the area that could be affected.
