Subject: ME7727 - Kewaunee RVI Inspection Plan review - enclosed Table for submitted information

*** This message is identical to one sent a few minutes ago but corrects the TAC Number in the subject line***
=====

Based on the recent* telephone discussion, I produced a table to account for all the expected data. This is just a pointer to information and therefore need not be in the submittal that you are preparing.

It is a concise check on completeness, and it accommodates the dispersal of information that has occurred over the many submittals.

I propose that you send a filled-in version of the table below back to us in an email when you send the expected formal submittal intended for the docket. I will distribute it to the Reviewers. Besides speeding the review, it will assist with citations for the SE to be prepared.

Ganesh likes this approach. If it is not practical for you, please let me know. Note that "to be sent" should be used for future items to be entered later when submitted, so it will provide a status of completion as it is updated.

[enter "to be sent" for future submittals; enter letter ID, attachment, and page for present and past responses]	(1) KPS neutron fluence value	(2) KPS stress	(3) KPS temperature
Lower Core Plate			
Core Barrel Flange			
Barrel-Former Bolts			
Upper Core Barrel Welds			
Lower Core Barrel Welds			

Upper Core Plate Alignment Pins
