SURVEY REPORT

NORTH ANNA COL

DATA REPORT REV. 0

JANUARY 23, 2007

MACTEC PROJECT NO. 6468-06-1472

**DOCUMENTATION OF TECHNICAL REVIEW
SUBCONTRACTOR WORK PRODUCT**

Project Name: Dominion North Anna COL

Project Number: 6468-06-1472

Project Manager: Steve Criscenzo

Project Principal: Al Tice

The report described below has been prepared by the named subcontractor retained in accordance with the MACTEC QAPD. The work and report have been reviewed by a MACTEC technically qualified person. Comments on the work or report, if any, have been satisfactorily addressed by the subcontractor. The attached report is approved in accordance with section QS-7 of MACTEC's QAPD

The information and date contained in the attached report are hereby released by MACTEC for project use.

REPORT : Surveyor's Report for Soil Borings and Observation Wells, As-Built Location Survey – North Anna Nuclear Power Plant Dated 1-18-07

SUBCONTRACTOR: McKim and Creed, Virginia Beach, VA

DATE OF ACCEPTANCE : 1-19-07

TECHNICAL REVIEWER: J. Allan Tice

PROJECT PRINCIPAL J. Allan Tice

Raleigh, NC 27604

Ref: **Surveyor's Report for Soil Borings and Observation Wells, As-Built Location Survey – North Anna Nuclear Power Plant**

Dear Mr. Tice:

McKim & Creed, P.A. performed an as-built location survey of new soil borings, observation wells and other miscellaneous test sites during the period 28 November through 1 December 2006. The survey was performed in accordance with the specifications stipulated in the amended "Work Instruction No. 3" received from your firm dated 28 November 2006 and in accordance with the specifications detailed in Exhibit "D" of Bechtel Corporation's Technical Scope dated 26 July 2006.

The survey was performed by Jeffrey F. Gilley, Land Surveyor, Virginia License No. 2439 and Christopher Evans, Survey Technician, both of the Virginia Beach Office of McKim & Creed, P.A. A Topcon 304 electronic total station surveying instrument, 5 arc second horizontal and vertical accuracy, a Trimble 5700 L1/L2 Real Time Kinematic (RTK) GPS system with two rover units, and a Trimble DiNi 22 digital differential level were used for this survey. Trimble and Tripod Data Systems data collectors using Ranger platforms were used to store the data. Field notes of occupations and differential leveling were kept as a backup of the data collectors. All of the equipment was tested prior to conducting the survey to ensure the equipment was functioning within the required parameters.

The origin for the as-built survey was Control Monument No. 7, a brass disk embedded in concrete (Point No. 5010). The field survey was conducted using the same coordinate system and vertical datum as was used during the initial stakeout survey performed by McKim & Creed, P.A. in August 2006. Post, as-built survey coordinate translations and vertical adjustments were made to every point in the data set relative to Monument No. 7 (survey origin point). The new horizontal positions and vertical values for the data set coincide with the values determined from the submission of 10.5 total hours of static GPS observation data to the National Geodetic Survey's (NGS) Online Positioning User Service (OPUS). The static data was collected using the GPS RTK base receiver operating on Control Monument No. 7 from 29 through 30 November 2006. The OPUS solution is

**McKim & Creed, PA, Surveyor's Report for Soil Borings and Observation Wells,
As-Built Location Survey – North Anna Nuclear Power Plant**

incorporated into this report as enclosure 1 and was generated on 4 January 2007 after precise orbital data was available. After the OPUS solutions were converted to US Feet (1 meter = 39.37 inches), the position and vertical values for both days were averaged to determine the horizontal position of Control Monument No. 7 within the Virginia State Plane Coordinate System (VSPCS), South Zone, NAD 83 (CORS 96) (EPOCH 2002) and its orthometric height (elevation) relative to NAVD 88 (GEOID 03). The coordinate system and vertical datum used during the August 2006 survey were earlier versions of the VSPCS, South Zone, NAD 83 and NAVD 88. A review of the RTK vectors generated during the as-built survey confirmed that the difference in the north meridian was negligible and therefore no correction was applied to the north orientation of the data. The delta (Δ) values for the OPUS solution applied to Control Monument No. 7 and the entire data set are as follows:

Mon 7 – Point 5010	Nov 06 Field Values	OPUS Δ Values	Jan 07 OPUS Position
Northing	3909877.58 usft	-2.60777	3,909,874.97 usft
Easting	11685941.43 usft	+2.0878	11,685,943.52 usft
Orthometric Height	303.89 usft	-0.12585	303.76 usft

The OPUS translated positions for the remainder of the data are as shown in enclosure 2.

The base station for the RTK system was positioned on Monument No. 7 during all RTK sessions. RTK checks were made on an existing 5/8" reinforcing rod and cap with values ascertained during the stakeout survey conducted in August 2006 (Point No. 10308, position values prior to the coordinate translation). The "check-in" parameters were 0.038 US FT or less for both horizontal and vertical measurements. Fixed height poles were used with all the GPS units to ensure vertical accuracy. Checks were performed in the morning and the afternoon each day. Control points established by RTK method were observed for 3 minutes and 180 epochs at 5Hz. As many conventional measurements as were practical were initiated from Monument No. 7. All control set conventionally was measured in both the direct and reversed scope positions to compensate for systematic eccentricities in the conventional instrument. All meaned angles were held to a tolerance of 10 arc seconds or less. All distance measurements were made in both the direct and reversed position and held to a tolerance of 0.01 US FT per hundred feet measured or less. The methods employed ensure that all horizontal positions meet or exceed the requirement of 1 part in 5000 and 0.1 US FT vertically relative to Monument No. 7. Every occupation of control points with the total station, established by either RTK or conventionally, was checked by using the backsight confirmation routine of the TDS data collector. This ensured accurate instrument and target/prism pole height and relative accuracy between points.

January 18, 2007, Page 3 of 14

**McKim & Creed, PA, Surveyor's Report for Soil Borings and Observation Wells,
As-Built Location Survey – North Anna Nuclear Power Plant**

Based upon the methods employed and the quality of the data collected, the undersigned certifies that the relative accuracy of the data set resulting from this survey meets the accuracy requirements stipulated by MACTEC, Inc. and Bechtel Corp.

Regards,

Jeffrey F. Gilley, LS
Geomatics Office Manager
