ROCK	WR	Weathered Rock
	HR-WR	Hard Rock-Weathered Rock
	HR	Hard Rock

WEATHERING	ROCK HARDNESS
FRESH - Rock fresh, crystals bright, few joints may show slight staining, rock rings under hammer blows. VERY SLIGHT - Rock generally fresh, joints stained, may show thin clay coatings, crystals on a broken face shine brightly, rock rings under hammer blows. SLIGHT- Rock generally fresh, joints stained, discoloration extends into rock, joints may contain clay, some feldspar crystals are dull and discolored, rock rings under hammer blows. MODERATE - Significant portions show discoloration and weathering effects, feldspar crystals dull and discolored, dull sound under hammer blows. MODERATELY SEVERE - All rock except quartz discolored or stained, feldspars dull and discolored and show kaolinization, dull sound under hammer blows, severe loss of strength. SEVERE - All rock except quartz discolored or stained, very severe loss in strength, some fragments of strong rock may remain. VERY SEVERE - All rock except quartz discolored or stained, only fragments of strong rock remain, saprolitic. COMPLETE - Rock reduced to soil, may show rock fabric, quartz may be present as dikes or veins.	VERY HARD - Cannot be scratched by knife or pick, very hard blows with hammer required to break. HARD - Can be scratched by knife or pick only with difficulty, hard hammer blows required to break. MODERATELY HARD - Can be scratched by knife or pick, can be broken with moderate hammer blows. MEDIUM HARD - Can be grooved or gouged by knife or pick, breaks easily. SOFT - Easily grooved or gouged by knife or pick, weak, small pieces maybe broken with finger pressure. VERY SOFT - Can be carved with knife, very weak, scratched with finger nail. **FRACTURE SPACING** VERY WIDE = > 10 feet WIDE = 3 to 10 feet MODERATELY CLOSE = 1 to 3 feet CLOSE = 0.15 to 1 feet VERY CLOSE = Less than 0.15 feet
