Chairwoman Allison Macfarlane  
U.S. Nuclear Regulatory Commission  
Mail Stop O-16G4  
Washington, DC 20555-0001

Dear Chairwoman Macfarlane:

Please find enclosed a signed petition by residents of New York and New Jersey, urging the Nuclear Regulatory Commission to deny the relicensing renewal requests for reactors 2 and 3 at Indian Point Entergy Center in Buchanan, New York.

Like many of the residents of the Lower Hudson River Valley, the petitioners believe that Indian Point is simply the wrong plant in the wrong place. With 20 million people residing within 50 miles of it, the area is too densely populated to safely evacuate in the event of an emergency.

Furthermore, overwhelming consensus among all levels of government and private sector partners now exists to identify and support new energy transmission and production projects, and improve the efficiencies of existing technologies so that the region can begin transitioning off the power supplied by Indian Point.

I respectfully request that you incorporate the attached citizen petitions into your review of Indian Point's relicensing application.

Sincerely,

Nita M. Lowey  
Member of Congress

Dear The Nuclear Regulatory Commission, The New York State House, The New York State Senate, and Governor Andrew Cuomo,

We are pleased to present you with this petition affirming this statement:

**"We, residents of the Hudson Valley and the metropolitan New York and New Jersey areas, are demanding that the licensing renewals for the Indian Point nuclear power plant for 2013 and 2015 be denied, and that the plant is closed down as soon as possible. Studies have shown that with upgrades in the New York State power grid, with energy efficiency and conservation measures, and investment in renewable sources, Indian Point's capacity can be replaced with minimal cost to consumers."**

Attached is a list of individuals who have added their names to this petition, as well as additional comments written by the petition signers themselves.

Sincerely,  
Renee & Jordan kalfus

You have to wonder how long we can go before there is a terrible accident. Are we just supposed o keep our fingers crossed? Try to imagine evacuating all the people in the NYC metropolitan area. Impossible. Is it worth the gamble just so the nuclear power industry can keep making profits?

I have been putting in my 2 cents worth in about the need to close Indian Point Nuclear Plant for years--I don't think the NRC is listening. I ride with an ambulance corps that covers the TZ Bridge, if we have difficulty getting to the scene of an accident with lights and sirens, what chance does a family have getting across in a car during a nuclear accident???. NRC members--Put yourself and your family in the middle of the TZB during a nuclear accident--THINK ABOUT IT!!! Use renewable power sources & retrain the IPNP employees to work the new energy plant.

When we have the opportunity to close a nuclear power plant, we also have the opportunity to promote solar and wind power to replace it as soon as feasible. It never made sense to me to put a nuclear power plant where many millions of people could never evacuate in time. But then it never made sense to me to produce waste that we had and still have no viable way to dispose of. This plant can be shut down with no one to mourn its passing.

Gov. Cuomo wants to close Indian Point. The NY State Assembly has determined we don't need it. Indian Point is located near two earthquake faults. In addition to returning billions of gallons of superheated water to the Hudson River and killing billions of fish, this plant is violating the Clean Water Act and has been operating without a required state water permit for several years. It has overcrowded spent fuel pools, operating without temp gauges or any protection from terrorists or the elements. It has corroded underground pipes. It leaks tritium and vents radioactive steam regularly to control the temperature of the reactors. As of September one reactor will be operating without a license--a first in the history of U.S. nuclear energy. Leukemia and thyroid cancer rates are elevated around the plant. Indian Point is located within 26 miles of Manhattan and the residents of three states would be affected should there be a station blackout and the loss of the ultimate heatsink. There is no plausible evacuation plan, and the recommendation to shelter in place for two weeks is totally unacceptable. I have been protesting these nuclear reactors for 36 years and demand that Indian Point be decommissioned and that its employees be re-hired to decommission the plant as soon as possible.

it will probably be global radiation levels that cause humans to become extinct on earth. Eventually there will be more horrific accidents than Fukushima. Indian Point and all other nuclear reactors in the U.S.A. and the world need to be shut down. The U.S.A. needs to shut down all reactors and begin the process of cloistering the terrifying amount of radioactive waste that has already been produced.

The evacuation plan is simply not workable for this area, which is a patchwork of narrow, often steep, single lane roads. Even the mending of the bridge on 9D last summer caused massive tailbacks. An evacuation would quickly become a bottle-neck of desperate people in a logjam traffic.

Please know that there have been no effective means of evacuating the dense population of the greater NYC metropolitan area should something go awry at Indian Point Nuclear Power Plant, like at Fukushima in Japan. Also, what defense do we have if this site is attacked like the World Trade Center? There have also been many incidents/accidents that have already occurred here. For these reasons and many more, we must ask that this facility be shut down as soon as possible. It continues to be a threat to the well-being of all living persons who work and live close by. Thanks you.

There would be no possibility of Indian Point being built today in its present location as the risks would be unacceptable. But it does exist and its status has been justified because to remove it might raise our electric rates by 20cents/kwh. While the risk is low, imagine the effect of rendering the most important city in the world and its environs uninhabitable as was the case with Fukushima, because we were willing to risk such a disaster to save \$.20/kwh. Any argument to preserve IP's status would appear to be pathetic if our water supply became contaminated because of such a disaster. The slightest possibility of such an event demands immediate shut down and eventual removal of all radioactive materials.

Only about 38 miles from NYC's boroughs, this oldddd style nuclear plant is sitting on the Hudson River (an extra water table conduit for its dangers), is near invaluable water sources, near one of the world's most important s cities in the histpory of the world with a huge population and is situated on the Ramapo fault. Fukushima, an incredible worldwide disaster including areas of Tokyo, is located more than three times the distance from Tokyo at about 175 miles as opposed to Indian Point which is only about less than 50 miles from NYC, about 36 miles from the Bronx / Riverdale areas.

You know that this could be a disaster. At that point, it's too late. Please please take a look at the real truth here! I don't care if my energy bill goes up - if my risk of accidents goes down. Rev. Robin Hammer

Robin Hammer

We need to conserve electricity and we are wasting it; I teach in a school where the lights are on all day and the sunlight is shut out by curtains. I notice this absurdity all over the United States, people shut out the sunlight in order to replace it by artificial light. They also use twenty bulb to replace three or four claiming that they are using more efficient bulbs. We could get rid of Indian Point simply by imitating Europeans in their use of electricity. Let use imitate countries that know how to conserve energy and we will not need to subsidize nuclear power.

How's this for scary--Our house is within the ten mile evacuation zone. The school across the street is just beyond ten miles, and is a site that school children will be sent should there be an evacuation. It's insane. We've seen two major accidents (Russia and Japan) that caused monumental damage. What are we waiting for? It's time to close Indian Point.

There is no way to evacuate 11 million people should an accident occur. There is no way such a dangerous facility should be located in New York State. I would gladly pay \$3-\$4 dollars more each month to close this plant and eliminate the possibility of such a massive and tragic loss of life and property. For the love of God, close this dangerous plant!

May 31, 2013

---

I have every reason to believe that Governor Cuomo is invested in the well-being of everyone in New York State, and will do everything he can to close the Indian Point Nuclear Power Plant. Two of my daughters, five of my grandchildren, and my husband and I live 35 and 40 miles away from Indian Point. We all need protection!

Studies and common sense both show that the "evacuation plan" in the event of an incident at Indian Point would be disastrous. Streets clogged to a standstill, parents trying to pick up kids from school, chaos at the temporary shelters--given the plant's vulnerability due to geographical location and age, it's just not worth the risk. Why are we not investing further in solar, wind and geothermal energy instead--or even mandating that businesses raise their thermostats to reasonable temps in summer?

May 31, 2013

---

It is also important to recognize that Con Edison only contracts 500MW of Indian Point's output and the New York Power Authority is letting their contract for 200MW expire without renewing. We do not need the power and we do not want the accident risk or further build up of deadly radioactive wastes threatening the invaluable Hudson Valley and New York Metro area. BTW, about 90% of NYC's water supply goes through reservoirs and aqueducts with a few miles of Indian Point. PLEASE Think about upside benefit vs. downside risk potential.

The Indian Pt plant is one of Entergy's most profitable, a point not well known. That means electricity generated here is sold as far away as California, making Westchester a third world country where life is cheap and expendable. In the event of a grid failure, the generators will be vulnerable. It is possible to shut down the plant, but the spent rods will go critical without the million plus gallons of water needed to keep them cool.

Indian Point 2, as run by Entergy, is a train wreck waiting to happen. It is clear Entergy is trying to suck out as much money from ratepayers as possible without doing what is necessary for our rights and our safety: stop the leaks in the spent fuel pools, remove all fuels for dry-cask storage, and close a plant that has already had too many safety problems. SHUT IT DOWN, NOW! We can LIVE without Indian Point.

Fukushima can happen at Ind. Pt.. how about the 2 faults below the site. what about a jet crash from some benighted activist? what about a fire that can't get contained? beyond the ruination to 50 million, would the country survive with a permanently damaged NYC? IP stockholders will survive a shutdown- they might even benefit from an entergy initiative into renewables. let us not all possibly go literally down for entergy, an entity which can't care less about us NYC area people.

INDIAN POINTLESS was built with a usefull life span of 40 yrs. TIME IS UP!! There are two faults in vicinity of plants. Fukushima is real mlife warning to close Indian Point. There is no way to evacuate an area inclusive of NYC. Terrorism did not exist when plant was built. If I was a Terrorist, Indian point would be my Primary target. Nuclear waste has never been removed from the site and it is not in any kind of secure underground silicone/concrete casks similar to those used by the U.S. Navy!! IT IS A NO BRAINER! IT IS TIME TO PUT INDIAN POINT TO SLEEP!

I live in the 10 mile radius of Indian Point, and worry about the problems with evacuation in the event of an accident, low-level radiation (Rockland County has one of the highest breast cancer rates in the State) and the problem of waste storage, and the vulnerability to terrorists. IT makes perfect sense to shut it down. Don't bow to industry pressure. We need renewables now,

Joyce Bressler  
Valley Cottage, NY 10989  
May 29, 2013

---

Time to move past dangerous power sources- no more nuclear and no fracked shale gas. Time for greater efficiency and an assortment of true renewables.

Erin Heaton  
Armonk, NY 10504  
May 29, 2013

---

It's past time to retire these nuclear plants and start in earnest utilizing renewable sources.

There is absolutely no excuse for relicensing Indian point nuclear plants. There is absolutely no doubt that a significant risk of a nuclear meltdown could occur, due either to natural causes, terrorism or negligence. In any event, residents affected in any way will have no escape, and no recourse to litigation, should they survive, but be rendered unemployed, homeless and/or seriously ill due to radiation exposure. This could affect residents within a 50-mile radius, which would include New York, Connecticut, New Jersey and Massachusetts, probably some 25 million residents at risk, just to avoid the unpleasantness of closing down a nuclear threat, for which plenty of alternate power sources can be developed.

Well overdue to shut Indian Point. It poses an immediate and dangerous threat to millions of people in harm's way. NY has the technical capacity and the economic feasibility to meet its energy needs now through energy efficiency, conservation, and renewables without Indian Point. Time to move into the 21st century with cost-effective and energy efficient solutions!

This plant is far too dangerous and would NEVER be permitted to be built where it is now - the re-licensing should likewise NOT be permitted for the same reasons and because it has reached the end of its design life and is a threat to millions. The energy we get is too little to take the risk! Shut it down now and begin the de-commissioning and clean-up which will take decades and likely will NEVER be totally returned to a pristine site and leak radioactive elements into the ground-water and our priceless Hudson River forever. Enough!

Please help save our future as well as our present by averting a catastrophe and close Indian Point. Nuclear destruction is bad for business as well the millions whose lives will be ruined if they are lucky to somehow escape death when an "accident" occurs. No letter of apology could ever heal the horrors of 'thee miolo island. We are NOT at war with the millions of people who will be affected by what is sure to eventually happen. Since we are rightfully concerned about the threat of terrorism at this time in our history, PLEASE close down the greatest terrorist threat to all of us who live within 50 MILE RADIUS of Indian Point. I send all of this as an 82 year taxpayer, proud US Army veteran, patriot, 4-H volunteer and son to be grandfather with three children. They and our first grandchild will have a hard enough time growing up and having a life when they face the prospect EVERY DAY of being victims of the worst catastrophe our country has ever faced. Please, in the name of common sense, do NOT grant the renewal of the license to Indian Point. David Amram

At this point that entire piece of land could be used for Hydro and solar and as designs become more efficient, there would be no environmental impact. Just a thought.,

It is untenable to relicense this bomb waiting to happen in such a populous region. Unless of course the plan is to murder 20 million people, in which case the NRC is a mass murderer in the making.

I strongly support this petition, living just about 11 miles below Indian Point. Please re-visit all the ways that Indian Point's capacity can be replaced at minimal cost to all. Take into consideration also the absolute impossibility of evacuating the residents and/or business people in the area in the case of an emergency at the plant! This would cause utter disaster!

For many years we have lived and worked within 10 miles of the reactor. My intuition told me this was affecting our population in a negative way, and I would welcome alternative energy sources. But please do not burn coal or diesel at a power plant in this area. I know from my years in Pennsylvania that it accerbrates our respiratory problems. Thanks.

If you were lucky enough to get out of the area with your life, what would you have left? Your home, belongings, anything in the wake of the disaster would be gone. Where would you go and how would you, your family, manage? How would you get money if your 'local' bank was closed down? The plant was never designed to run this long; it's time to shut it down and remove the highly toxic casks from this huge populated area!

As one of those citizens who live not even a mile outside the so-called-danger zone... what will you all do if something happens to this aging plant? Fukushima is a heads up call! Close it while you can... New York is straight down the river and nuclear plumes would have nothing to stop them. Think of an empty NYC.

Indian Point ought never to have been built to begin with. Now that its license is expiring it is perfect timing to shut this dangerous horrifyingly risky plant down. Q: Are you aware there is no present authorized spent fuel rod facility to which Indian Point can ship its dangerous used rods? As a result they are stored on site in risky pools? People are learning how conflicted and weak is the regulatory apparatus charged with protecting area residents. How the Atomic Energy Commission is inherently pro-nuclear industry. How Entergy has proven dangerously sloppy and cheap in its activities (see Vermont/Yankee plant). People know difficult choices abound but people want elected representatives to be smart about people before money. Be smart about people and shut down this blight on the conscience of the community. Kill this plant and start a strong program to move towards renewables. Start today and accomplish something right tomorrow. Thanks!

This energy source must not be replaced with oil or coal fired plants but instead with green alternative renewable energies such as wind power,solar,or hydro-electric.

I don't have much, but would hate to lose what little I do have to a much larger catastrophe. What is the state waiting for in closing Indian point? Hasn't the past few catastrophes taught us anything? It is better to be safe than sorry. Please close down this nuclear plant.

I live in Pomona, NY and each and every time the sirens sound (and it happens FREQUENTLY) I shiver and believe "it's finally happened." It is time to close this plant down and allow the residents in NYC, Jersey, Westchester and Rockland to breathe a sigh of relief. Let us not wait for a an event such as what occurred so recently in Japan. Let us take the bull by the horns and close Indian Point NOW without further ado.

I live within ten miles of Indian point and that frightens me. The plant is getting old and anything old begins to develop wear and tear. Lets find another safer energy source...Please
